

Ministry of Planning and International Cooperation

Executive Development Program 2011-2013

HIS MAJESTY KING ABDULLAH II IBN AL HUSSEIN

You are well aware of our economic programmes to provide citizens with the best livelihoods by increasing the productivity of the national economy, ensuring its growth, raising its competitiveness and maximising its ability to attract investment and create jobs. You must continue with economic reforms through programmes and plans that yield the best possible national economic performance, build genuine partnership between the private and public sectors, ensure fair distribution of development gains, expand the middle class and protect the poor.

His Majesty King Abdullah II's letter of designation to Marouf Bakhit 1 February 2011

The process of reform and modernisation started several years ago, and we are determined to continue the process in order to build on the plans, programmes and objectives of the National Agenda and that can achieve the prosperity and progress for our country.

Achieving these objectives requires that the formation of your cabinet is inspired by a seamless work plan that identifies specific objectives in every sector and defines timelines for the implementation and achievement of these objectives. This is necessary so that performance can be evaluated, decisions accordingly made and responsibilities appropriately assigned.

government's economic plan must also include measures to achieve a balance between financial capabilities and demands for public spending; to preserve fiscal and monetary stability; to strengthen our reliance on our own resources; to develop our own economic legislation; and to achieve the best possible balance in terms of development among the governorates so as to achieve better living standards for citizens and fight poverty and unemployment. Work must also focus on protecting the poor and underprivileged and on strengthening institutional work to care for those in need.

The government's economic policy should focus on achieving food and water security and on responding to the Kingdom's need for energy resources through long-term planning and pursuing mega projects that are capable of responding to our growing needs

His Majesty King Abdullah II's letter of designation to Samir Rifai

At the top of national priorities, there stands, in the medium-range, economic reform and the completion of a strong national economy that reflects positively on Jordanians' standard of living. Our vision here is based on the government's commitment to providing basic services of highest quality to citizens, to fulfil citizens' needs and respond to their priorities, to doing what is necessary to harmonise the level of health, educational and infrastructure services in the capital, the countryside, Badia and refugee camps, and to ensure a just geographic distribution of development returns

Speech from the Throne opening the Second Ordinary Session of the 15th

Parliament

But we now need a majority to agree on an action plan that will guide everyone - government, parliament, the private sector and civil society organisations - towards a renaissance in Jordan, making the future we aspire to and facing internal and external challenges which you are all aware of.

Speech of His Majesty King Abdullah II At the Preliminary Meeting of the We Are All Jordan Forum 12 July 2006

Introduction

The initiative of His Majesty King Abdullah II bin Al-Hussein, the National Agenda has been received with acclaim nationwide by all segments of the Jordanian society, and have shaped the milestones of development for a ten-year period 2006-2015. The Royal initiatives meant to inform the government when drawing up short and medium term development plans, boosting Jordan's transition from dependence on central planning to collaborative decentralized planning involving the various players in society, including ministries, government agencies, the private sector and civil society organisations.

Along those lines, the Executive Development Program (2011-2013) has been launched to complement the previous development programs and to serve as an action plan for the government for the next stage. This program was prepared in collaboration with all stakeholders, building on the recommendations outlined in Kulluna Al Urdun (We Are All Jordan) imitative, the National Agenda, the letter of designation, the Royal initiatives, the sectoral strategies and those proposed by Jordan's House of Representatives on financial and economic reform programs. The program, in addition, incorporated some elements on general policies and strategies related to the Millennium Development Goals and indicators, population opportunity policies, poverty reduction strategies through local development, integrated funding strategy for combating desertification, the national strategy for persons with disability, the priorities of comprehensive plan outputs for the Kingdom's governorates and gender equality.

The preparation of the program was vested in a steering committee formed of ministries' secretaries general under the chairmanship of the Ministry of Planning and International Cooperation (MoPIC) and with the membership of line ministries and agencies. In addition, fourteen working groups were formed with the involvement of some hundred agencies in the preparation of the pillars of the program. These groups comprised Secretary general and directors of line ministries and agencies.

The Executive Development Program for 2011-2013 incorporated the Royal directives and the Agenda's goals, namely; accelerating economic growth, improving citizens' standards of living, reducing poverty, decreasing unemployment rates, maintaining the utmost possible developmental balance between the country's regions, increasing national investments and exports, lowering inflation rates, reducing the budget deficit and public debt, developing water resources and alternative energy resources, and promoting human development. The program is made of seven pillars covering all economic and social spheres, and include projects and activities tied by implementation timeframes. It also shows financial costs and provides for more than 600 performance measurement indicators.

MoPIC, in cooperation with all executive parties, identified and arranged the developmental priorities for the next period, with special attention given to interdependence of policies and goals of programs and the projects to be implemented throughout the course of the program, in such a manner that preserves the integration of national goals. The volume of spending on programs and projects has also been taken into consideration for optimal use of available financial resources and for ensuring their conformity with sectoral objectives and policies.

The sectoral working groups and committees conducted a comprehensive review of the national economy in light of the new conditions and challenges facing Jordan. Consequently, a set of challenges facing the Kingdom in the next phase has been identified at the micro and macro levels, especially those associated with the global financial crisis, most importantly:

1) Economic recession and expected decrease in economic growth rates.

- 2) Control of public budget deficit and adaptation to the changes witnessed by the world economy and their reflections on the Jordanian economy, as well as the need to control indebtedness within the limits set forth in the Public Debt Law.
- 3) Lowering current account deficit to acceptable levels, and maintaining the stability of general prices levels.
- 4) Maintaining the growth rates of national exports, which requires exerting more efforts to retain traditional markets of national exports and opening new markets where Jordanian exports have a competitive advantage.
- 5) Ensuring the flow of investments and capitals into Jordan and overcoming the obstacles to investment promotion.
- 6) Reducing poverty and any developmental disparity between governorates and districts.
- 7) Addressing structural imbalances in labor market and high unemployment rate.
- 8) Achieving water, food and energy supply security.

To address such challenges, the program seeks to realize a set of objectives in the next three years by building on the previous achievements of the Executive Program (2007-2009). These objectives are as follows: (1) strengthen the independence and integrity of judicial authorities and develop the legislative framework (2) maintain financial and monetary stability and increasing self-reliance (3) reform the public sector as well as human resources and increase their productivity (4) enhance the knowledge-based economy and harmonize education outputs with labor market requirements (5) create an appropriate environment for business and investment and promote the national economy's competitiveness (6) increase local exports and open up new markets to support Jordanian producers (7) promote tourism products and preserve Jordanian cultural heritage (8) enhance the agricultural sector's competitiveness and raise its quantitative and qualitative productivity (9) promote local development to achieve a high level of developmental balance between governorates, protect the middle class, reduce poverty and reduce unemployment (10) expand the base of social services, provide infrastructure including appropriate housing and focus on poverty pockets (11) develop water resources and upgrade their management efficiency (13) secure energy supplies and diversify energy sources (13) raise the competitiveness of information technology and knowledge transfer (14) Encourage the private sector to enter into partnerships to undertake major development projects in economic sectors, particularly energy, water, transportation and industrial zones.

The Executive Development Program is composed of seven essential pillars covering all economic and social sectors and introducing a quantitative macroeconomic framework. These pillars are: (1) legislation and justice (2) improvement and development of business environment (3) administrative, financial and monetary reforms (4) support of occupational and technical training and employment (5) social welfare (6) general education, higher education, scientific research and innovation (7) modernization of infrastructure.

A sectoral analysis of the various program pillars has been conducted, including transitional sectoral objectives, policies, projects and procedures identified with action plans, financial costs and implementation schedules in addition to performance measurement indicators at the level of sectoral objectives and policies.

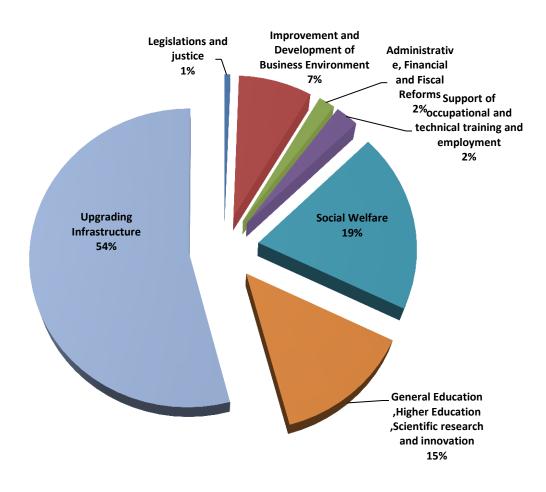

The program's projects and activities were selected on the basis of priorities decided according to those that have the most potential to stimulate economic growth, employ Jordanian workers, stimulate local and foreign investment, use local inputs with high added values, give the incentive to export sectors, and distribute benefits equally among all regions of the country.

The cost of the three-year program 2011-2013 amounted to JD 5.5 billion, distributed on program's pillars and sectors set out in the following tables:

Summary of the Expected Expenditure of the Executive Development Program, 2011-2013 by Pillar

(1000 JD)

Summary of the Economic Status

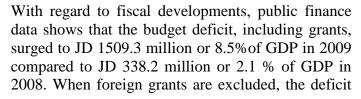

GDP at constant market prices grew by 2.3% in 2009 compared to 7.6% in 2008. Per capita income at current prices rose from JD 1235 or US\$ 1744.3 in 2001 to JD 2979 or US\$ 4,208 in 2009; an average increase of 10.5% At constant prices, per capita income rose from JD 1116 in 2000 to JD 1591 in 2009; an average increase of 4%.

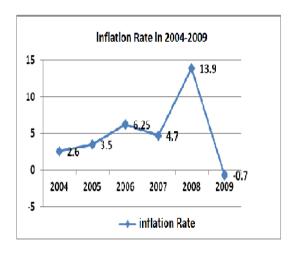

GDP at Constant Prices, JD million

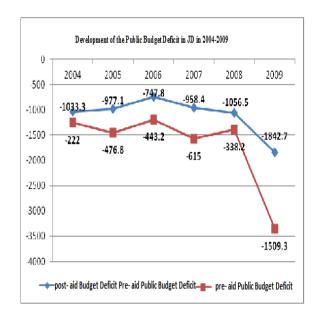

At the social level, the adopted government measures and programs in 2009 contributed to reducing the impact of the global financial and economic crisis on poverty and unemployment rates. despite the continued economic slowdown, Unemployment rate maintained its level in 2008 standing at 12.9% in 2009 compared to 12.7% and 13.1% in 2008 and 2007 respectively. It is worth mentioning that in the second quarter of 2010, the unemployment rate dropped slightly to 12.7%. Based on the Household Expenditure and Income Survey, poverty figures rose slightly to 13.3% in 2008 compared with 13.1% in 2006.

In 2009, the Inflation rate measured by the percentage change in consumer price index (CPI) contracted to stand at -0.7% compared to 13.9% in 2008 representing the lowest record since 1987 when the inflation rate stood at -0.2%. Such development was mainly due to the drop in prices crude oil and basic commodities international markets and the slowdown domestic economic activities in addition to the slowdown or recession of the major trading partners economies. According to statistics, the inflation rate in 2009 was an outcome of the growth in prices of "Food Items" which increased by 1.7% compared to 18.6% in 2008 and the growth in prices of "Clothing & Footwear" which were up by 5.8% in 2009 in comparison with 7.3% in 2008, on one hand, and the drop in prices of "Housing" and "Other Goods & Services" by 1.7% and 4.0% against a growth at 13.4% and 9.8%, respectively, in the preceding year.

rises to JD 1842.7 million in 2009 against JD 1056.5 million in 2008.

This deficit was a result of the increase in public expenditures by 11% accompanied by an 11.2% decrease in public revenues in 2009. The total public revenues fell to JD 4521.2 million in 2009 compared with JD 5093.7 million in 2008 driven by the drop in domestic revenues by 4.3%, and adrop in foreign grants by 53.6%. Total expenditures rose by 11% reaching JD 6030.5 million in 2009 against JD 5432 million in 2008 due to the increase in current and capital expenditures.

Net public debt amounted to JD 9660 million at the end of 2009, reflecting an increase of 1109 million or 13% compared with 2008. The ratio of the net public debt to GDP rose from 53% at the end of 2008 to 54% at the end of 2009.

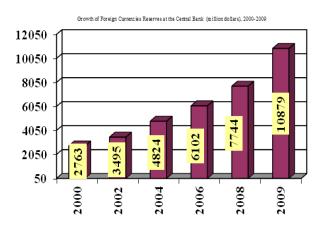

This higher net public debt was an outcome of higher domestic public debt which reached JD 5791 million or 32.5% of GDP in 2009 and the increase in outstanding balance of external public debt which stood at JD 3869 million or 21.7% of GDP. Such increase was mainly due to the implementation of a set of government plans and programs which aimed to stimulate the national economy after it was affected by the global financial crisis. Moreover, these programs have stabilized poverty and unemployment levels compared to pre-crisis levels.

At the monetary and banking sector level, the Central Bank has adopted a set of measures to optimize liquidity in order to enhance economic growth and to stimulate the banking system so as to continue to provide credit facilities to various activities and economic sectors. In this regard, the Central Bank cut interest rates on its monetary policy instruments three times during 2009 by 50 basis points each time as well as suspending certificates of deposit in 2009 and reducing the required reserve ratio in two stages from 9.0% to 7.0% in 2009. Such a policy has contributed to checking domestic liquidity slowdown (money supply in its broad concept M2), which rose in 2009 by JD 1.7 billion or 9.3%, compared to 17.3% in 2008, to reach about JD 20 billion. The rise was due to the increase in net foreign assets at the banking system by JD 1.8 billion, , and the decrease in net domestic assets at the banking system by JD 0.1 billion.

In addition, the outstanding balance of credit facilities extended by licensed banks rose by 2.1% by the end of 2009 to JD 13317. 2 million, compared with the level recorded at the end of 2008. At the level of the distribution of credit facilities balance by economic activities, the facilities balance provided to the construction sector increased by JD 289,4 million (12.6%), general trade sector by JD 297,9 million (10.3%), transportation sector by 82.6 million (22.3%) and tourism, hotels and restaurants increased by JD 82,6 million (22.3%) and JD 61.3 million (16.7%), compared with their level at the end of 2008. However, the credit facilities classified under "others", mostly

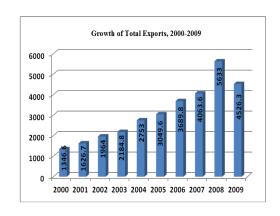

representing facilities extended to individuals, recorded a decrease of JD 560.6 million (14.2%). Deposits at licensed banks at the end of 2009 reached about JD 20298.5 million, an increase of JD 2195.9million or 12.1% compared with the end of 2008. This was due to the rise of deposits in domestic currency by JD 2516.7 million, on the one hand, and the decrease of deposits in foreign currencies by about JD 320.8 million, on the other hand.

Official foreign reserves at the Central Bank rose to US\$ 10.9 billion at the end of 2009, a growth of 40.5% compared with their level at the end of 2008. It is worth stating in this respect that such a comfortable level of foreign currencies reserves is enough to cover more than seven months of imports of goods and services

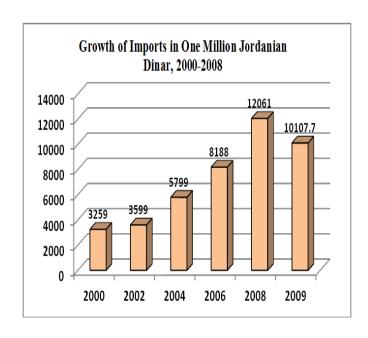

The indicators of Amman Stock Exchange witnessed a sharp decline in thier performance during the last third of 2008 and the whole year of 2009 under the pressure of the consequences of the global economic and financial crisis, represented by the slowdown or contraction of most economic activities, tightening of granting credit facilities by banks to most economic activities, especially financing stock purchases as a result of the continued conditions of uncertainty, which have prevailed to the present. Amman Stock Exchange, like the majority of stock exchanges in the world, was one of the most affected activities by the global financial crisis. The share prices index weighted by free float shares dropped by about 225 points or 8.2% during 2009 following the sharp retreat of the share prices index in 2008, when it fell by 916.6 points or 24.9%. The above developments led to the decrease of the shares' market value by JD 2.9 billion at the end of 2009. The trading volume dropped by about 52.4% in 2009 to stand at JD 9.7 billion compared to JD 20.3 billion in 2008. The net investments by non-Jordanians at the Amman Stock Exchange witnessed a net outflow of JD 3.8 million in 2009 compared to net inflow of JD 309.8 million in 2008.

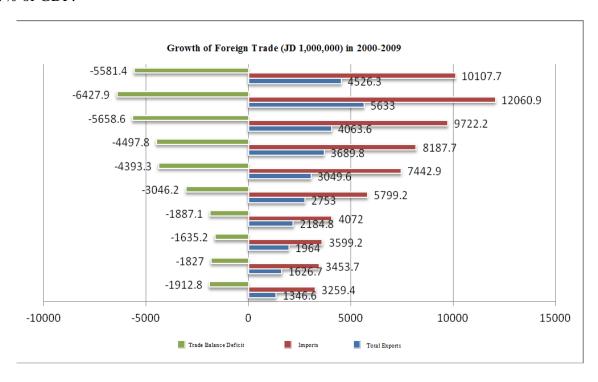

In the external sector total exports value decreased by 19.6% in 2009 amounting JD 4526.3 million compared with JD 5633.0 million in 2008. This drop was the result of the continued consequences of the global economic and financial crisis, which noticeable led to the decline in exports value covering clothes and accessories, pharmaceuticals, crude potassium, fertilizers, vegetables and crude phosphate.

On the other hand, the value of imports in 2009 fell by 16.2% to JD 10107 million against JD 12061 million in 2008. The ratio of imports to GDP in current market prices was 56.7% in 2009.

According to the afore-mentioned developments, the trade balance deficit for 2009 fell to JD 5581.4 million. It is worth stating that the deficit in the current account of the balance of payments was about JD 797.2 million in 2009 or 4.4% of GDP compared with JD 1445.2 million in 2008 or 8.7% of GDP.

Challenges Encountered by the Jordanian Economy

The Jordanian economy suffers from some structural imbalances most, notably in its production sector, the low contribution of goods sector compared to the service sector within the context of the current demographic changes and limited resources have increased pressure on infrastructure. the national economy is highly dependent on foreign aid, Its openness to the global economy has bad positive effects in terms of ease to access the global markets. however has made rendered the national economy more vulnerable to external shocks, Such a situation contributed to the following challenges:

• High budget deficit

Such a chronic budget deficit is due to higher increase in public spending rates countered by lower growth pace of public revenues. Public spending is driven by the increase in current expenditure which is overloaded by wages, subsidies interest payments and retirements expenses especially in the absence of foreign assistance. In 2009,the budget deficit after grants grew by (346.4)% representing (8.5%) of GDP compared to (2.1%) of GDP in 2008.

• High current account deficit

The 2009 figures declared a decrease in current account deficit by (42.5%) to reach JD (889.1) million compared to a deficit of JD(1546) million, Despite this achievement, (CAB) deficit still high and vulnerable to the international trade terms and worker remittances which is relies on the host countries' economies

• High Public debt

Public debt increased by JD 679.9 million during first seven months of 2010 to reach an amount of JD 10339.9 million compared to JD 9660 million at the end of 2009 representing (53.3%) of 2010 re-estimated GDP.

• High Unemployment rate

The Unemployment rate stood at 12.9% in 2009 compared to 12.7% in 2008.

• The Inflation rates are not stable and is assuming an increasing trend

In 2009, The inflation rate measured by the percentage change in consumer price index (CPI) contracted to stand at -0.7% compared to 13.9% in 2008.

• High poverty rates

The Poverty rate rose slightly to 13.3% in 2008 compared with 13.1% in 2006.

• Instable economic growth

GDP at constant market prices grow by 2.3% in 2009 compared to 7.6% in 2008

• Foreign investments fluctuations

Foreign investment decreased by 14.4% during 2009 in comparison with 2008 to reach an amount of JD 2426.6 million compared to JD 2832.9 million.

• Lower saving rates.

Despite the decrease in the saving gap from JD -880.1 million in 2007 to JD -72 million in 2008, saving figures are still negative.

• Trade balance deficit

The Jordanian trade balance is witnessing a continuous deficit due to the limited natural resources and lower contribution of industrial and agricultural sector In addition to the increase in international oil and food prices. Despite the decrease in trade balance deficit in 2009 by 14.8% to reach an amount of JD 5465 million compared to JD 6414 million in 2008, the trade balance is still below aspirations.

• Worker remittances fluctuation

Worker remittances represent a major support to the Jordanian balance of payments, These remittances a highly correlated with employment absorbing economies. Worker remittances decreased by 1.3% to reach an amount of JD 2214 million in 2009 compared to JD 2242 million in 2010.

• Sensitivity of the Jordanian economy to external shocks especially oil and food prices. The oil bill represent more than 15% of the Kingdom's imports, This percentage is changeable according to international oil prices.

• Structural imbalances in the production sector.

The Jordanian economy is considered a service economy, the contribution of agricultural and industrial sector is low compared to service sector which represents more than 70% of the economy.

Macro Economic Outlook, 2011-2013

First: Methodology of Working Out the Macro Economic Framework

The targeted indicators within the macro economic framework of the macro economy for the years 2011-2013 have been estimated according to the following principles:

- 1) Guidance by the Government and IMF in August 2010 of the main economic indicators such as economic growth rate, inflation rate, balance of payments and monetary indicators.
- 2) Guidance by the results of the Jordanian economy's macro model, especially the public fiscal sector, on the basis of the time series of the variables used in the model and their future performance based on several assumptions.
- 3) Linking the realization of the targeted economic indicators within the macro framework to projects, policies and measures at the macro and sectoral levels.
- 4) Guidance by the medium-term fiscal framework 2011-2013.

Second: Assumptions

The assumptions which have been adopted in preparation of the macro economic framework for the national economy through the implementation of the Executive development Program 2011-2013 were based on the desired objectives, namely the resumption of economic growth, public finance sustainability, monetary stability, reduction of trade balance deficit and investment flow sustainability. The following assumptions were suggested:

- 1. Beginning of recovery from the global financial crisis in 2010.
- 2. Inflation rate is stable at acceptable levels.
- 3. The increase of public revenues due to the expected increase of tax revenue.
- 4. Exports growth in 2011-2013.
- 5. Imports growth in 2011-2013 due to the expected improvement of demand, both consumption and investment.
- 6. Decline of budget deficit as percentage of GDP.

- 7. Maintaining a fixed exchange rate for the Jordanian dinar against the US dollar and maintaining comfortable levels of official foreign currency reserves so that they are sufficient to cover Jordan's imports of goods and services and remaining it within safe levels.
- 8. The growth of tourism income in acceptable levels.
- 9. Marinating a stable levels of Central Bank foreign reserves.
- 10. Enhancing a remittances levels in 2010 and resumption of their growth in 2011-2013.
- 11. Decline of current account deficit as a percentage of GDP.

Macro Economic Policies

The stability of economic policies, either monetary, fiscal or sectoral is a mainstay in enhancing economic performance which will be reflected in reducing both poverty and unemployment, in addition to improving the nation welfare.

To consolidate economic stability, the Executive Development Program (2011-2013) has been developed in t a comprehensive way that takes into consideration the global changes, the initiatives that has been implemented in the former Executive Program (2007-2009) and the 2010 Government's Action Plan. The adopted policies in terms of sectors were as follow.

Public Finance

The role of fiscal policy is not only in lowering the budget deficit and public debt but framing and stabilizing the economic performance and consolidation, the impact of the fiscal policy can be monitored by the performance of macro indicators such as GDP growth, inflation, investment, foreign reserves and others, in addition to its impact on both poverty and unemployment rates as well as national welfare, In order to manage public finance development, the following actions will be adopted:

Public expenditures

Improving public expenditure management for both current and capital expenditures by rationalizing and linking these expenditures with its economic objectives, In order to achieve this goal, it is necessary to develop appropriate indicators to measure the value for money by adopting best international practices and taking into account the following;

- Improving the accuracy of public expenditures estimations, where issuing budget supplements disrupts the fiscal performance and reflects negatively on the budget deficit especially as it increase the deviation between the actual fiscal performance and the estimated one.
- Prioritize public expenditure and organizing it according to its impact, in order to identify
 the areas and items that should be rationalized and to ensure the sustainability of economic
 growth without affecting social justice
- Arrange ,prioritize public expenditures in a manner that enhance economic growth and social justice.
- Setting up priorities of ministries and government agencies and other entities including the budgets of independent institutions as to ensure integration in achieving the sectoral goals as well as achieving the objectives of government institutions.
- Avoid issuing independent institutions budgets which contains fiscal deficit in order to ensure that institutions to match their incomes with their expenditures.
- Improving the efficiency and effectiveness of capital expenditures by cutting down the unnecessary spending, In order to achieve this goal, a comprehensive database for ongoing programs and projects will be established to identify the extent of consistency between these projects and programs according to thier objectives and sectoral strategies.
- Funding sectoral programs and projects that meet the strategic objective, The outcomes of these projects and programs should be integrated with other programs and projects in order to enhance economic growth.

Public revenue

- Increase the effectiveness and efficiency of tax collection and reduce tax evasion.
- Restructuring tax system to ensure flexibility in order to achieve the economic and social welfare goals in terms of better Wealth distribution and removal of social inequalities removal.
- Enhance the capacity of the Ministry of Finance on public revenues and expenditures projections in addition to updating these forecasts regularly and periodically (quarterly).
- Improving the monitoring process of the general budget by following up regularly an fiscal developments (annual and semiannual) in order to provide full information about state budget performance, such procedure will allow policy makers to implement right actions.
- Achieve full coverage of current expenditure from domestic revenues.

Debt

- To maintain secure public debt levels as stated in the public debt law by applying better debt management in terms of the trade off between domestic and external debt.
- Continue efforts to swap debts with investments
- Impose restrictions on borrowing to finance the current expenditure
- Monitoring external markets especially the exchange and interest rates in order to take the appropriate hedging methods which reduces the cost of this fluctuation.
- Reduce the cost of borrowing by developing the yield curve.
- Diverse the sources of borrowing between domestic and foreign bonds, short-term and long-term financing in order to ensure the reduction of borrowing cost, moreover it is necessary to benefit from low interest rates before they increase and to pay back debt obligations on time.

Monetary Policy

The stability of monetary policy and its integration with the fiscal policy within clear visions is one of the decision makers priorities and reflectes directly on economic stability.

Monetary policy priorities are to maintain stable exchange rate, contain inflationary pressures and maintain the soundness of the Banking system. In order to achieve these goals, the Central Bank has adopted a flexible monetary policy as to keep up of local and international economic developments. This flexibility will stimulate the economic growth and ensure fiscal and monetary stability. From this prospective the central bank continued using the monetary policy instruments in order to achieve the above mentioned goals, and to promote confidence in JD as a saving currency

In order to achieve the desired goals within the Executive Development Program , the monetary policy will seek to:

- Maintain an acceptable levels of money supply in order to stimulate economic activities
- Monitoring inflation rate and ensuring its stability.
- Adopting the appropriate quantitative and qualitative policies which will stimulate the economy by using interest rates or sector oriented policies.
- Monitoring the banking sector performance.
- Maintain stable levels of Central Bank foreign reserves.
- Keeping up with the developments in international exchange rates and interest rates and to
 ensure a flexible and appropriate interest rate structure which will ensure adaption to the
 economic challenges.
- Supervise the movements of bank credits to serve the economic stability.
- Adopting monetary policies that ensure a favorable business environment which attract foreign direct investments
- Support domestic exports

Investment Promotion

Jordan has made great strides in investment promotion through consolidation of market mechanisms, the activation of the private sector's role in economic life, the deepening of the economic freedom climate and the provision of a suitable regulatory investment environment, especially in development zones.

To increase domestic savings, attract more domestic and foreign investments needed for maintaining economic growth, it is necessary to activate the application of a set of investment legislations based on the evolution of a clear and transparent investment vision to enhance investors' confidence. Emphasis should focus on investment promotion programs with a view to introducing investment opportunities as well as promising sectors and industries to the private sector, through continued efforts to simplify legal requirements and administrative procedures demanded from both domestic and foreign investors. Here, it is necessary to underline the importance of achieving stability in the legislative environment, Furthermore, it is also necessary to improve the investment structure and promote its productivity through focusing on investment in the industrial sector through tax incentives and preparation of the environment for long-term finance.

Since strengthening the capital market is a major requirement to attract savings and stimulate domestic and foreign investments, it is necessary to continue securitizing the public debt, place its instruments through international auctions and start to issue long-term securities contributing to the establishment of a reference indicator for interest rates for long-term credit. Moreover, implementing more privatization processes as well as promotion of joint investment funds and setting up modern financial instruments such as derivatives and options would contribute to deepening the capital market.

Trade Liberalization

Jordan has made long strides in the trade liberalization field and promotion of its economic and trade relations with numerous countries through joining the World Trade Organization and accession to the Partnership Agreement with the European Union, Pan Arab Free Trade Zone Agreement, Free Trade Agreement with the USA and Qualifying Industrial Zones Agreement (QIZs), to expanding export prospects as well as attracting investments and making them a driving engine for economic growth.

To diversify exported goods and services, access new markets and enhance the ability to compete, efforts should be exerted to develop trade policies and strategies to reach external markets though cooperation between the public and private sectors by identifying trade development opportunities and targeted markets, monitoring economic and trade developments in other countries' markets related to the formulation of the Jordanian trade policy, promotion of Jordan's entry into the multilateral trade system through joining new regional and international trade arrangements in addition to the development and modification of customs tariffs structures in conformity with international agreements.

Enhancing National Economy Competitiveness

Efforts should be implemented to maximize the utilization of human resources and raise their productivity through focusing on the quality of primary education, higher education and vocational training for the purpose of moving from reliance on the resources-based economy to the knowledge-based economy as well as the expansion of the private sector's role and leadership through changing the state's role from the basic participant in production to the role of organizer, supervisor and monitor, the state will encourage competition, prohibiting monopolistic practices, improvement of competitive potentials of goods and services through upgrading their quality, raising productivity and reducing costs.

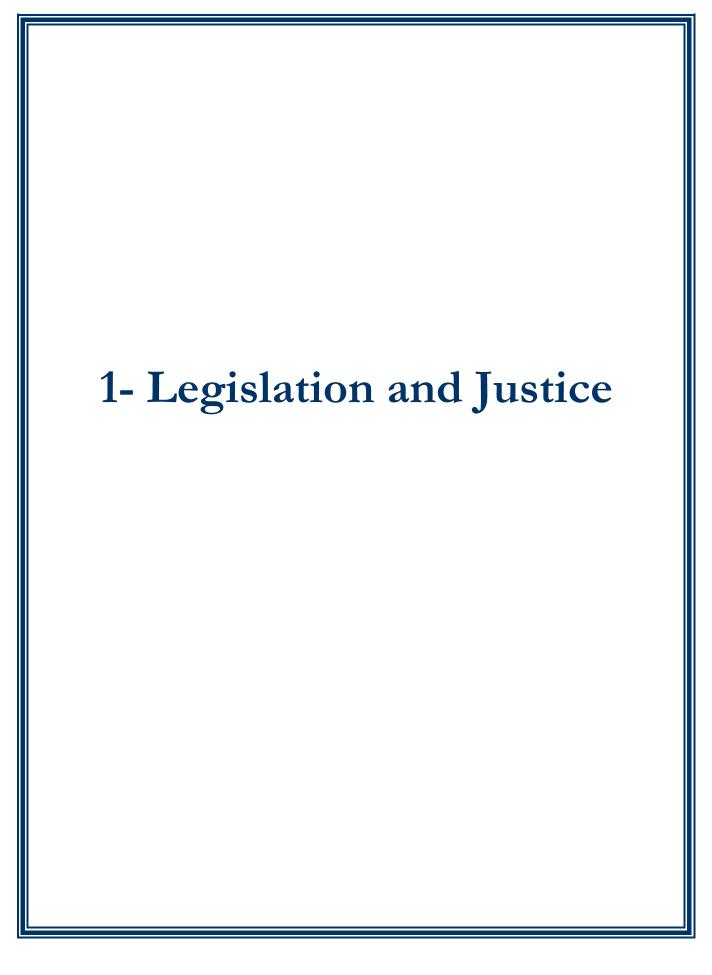

Consolidation of the national economy productivity and its competitiveness requires the improvement of the public sector efficiency and productivity through improving government services, supporting creative and innovative ideas, building an institutional and legislative environment to promote capital venture activities, increasing spending on research and development as well as establishing suitable mechanisms to link research institutions and centers.

Labor Market

Matching the outputs of the vocational and technical training system with labor market needs, locally and internationally, requires the direction of additional government investments to change vocational and technical training from a model of supply-based training to the model of demand-based training driven by market needs, provision of competitive skills, employment and development of technology through focusing on the improvement of the coordination level and cooperation between vocational training programs, development of excellent training programs, modernizing training programs to become more responsive to labor market needs, raising trainers' competence, promoting the private sector's participation in training programs to meet their needs for human resources, in addition to supporting specialized vocational training centers which respond to local labor market needs in various fields. It is necessary design a national comprehensive strategy to develop the capacities of youth's in cooperation with the private sector and non-governmental organizations.

The alleviation of poverty and unemployment problems requires the implementation of restructuring education and training systems to become capable of meeting innovations in the knowledge-based economy, meeting labor market needs for qualified employees, expanding appropriate training opportunities for the unemployed and low-income individuals with a view to equipping them with the skills required better in the labor market. Moreover, it is necessary to expand the creation of funding sources for income-generating projects and job opportunities, especially small and medium projects, support and promotion of people with pioneering ideas which can be turned into production projects as well as the importance of re-structuring the institutions involved in poverty mitigation and unemployment reduction, the creation of a comprehensive database for all such institutions to ensure avoiding duplication, increasing coordination among them to raise their efficiency in reaching targeted groups, and overcoming the problem of wasting resources and loss of efforts exerted in this respect. The creation of a comprehensive database for the labor market contributes to the identification of workforce characteristics with a view to enabling decision-makers to formulate policies in this domain. In addition, it is necessary to conduct a comprehensive re-organization and reform of the labor market, especially on immigrant labor, mechanism for the issue of work permits, its management and collection of its fees as well as the importance of levying fees on immigrant' work permits to use them in national workforce' training and employment programs.

Reform of the educational sector is important for providing the labor market with skilled and qualified young people. Consequently, it is necessary to speed up the implementation of the educational reform programme for knowledge-based economy with a view to enhancing the concept of continuous (lifelong) education, re-directing educational and strategic objectives through governance and administrative development, developing educational programs and practices to obtain learning outcomes related to the knowledge economy, upgrading the learning assessment and curricula as well as supporting the material learning environments quality and early childhood development, takes into consideration the need to promote the Ministry of Education and provide it with qualified and specialized employees who are capable of carrying out desired educational reforms, completing plans of action and schedules to implement programs and follow up the related progress of work, building institutional capacities at the directorates of education in Jordanian governorates and districts with a view to enabling them to exercise financial and administrative powers to identify the priorities of the districts within their powers covering the implementation, monitoring and assessment of educational projects as well as developing a national plan for pre-school education to address the quantitative and qualitative aspects connected with this important founding educational phase.

Legislation and Justice

The realization of Justice requires the existence of up-to-date legislations comprising the basis for organizing social, economic and political life of the society. It also requires continuous revision of the legislation to introduce new rules to address emerging conditions which existing legislations are unable to deal with. These legislations should be governed by the considerations of justice, liberty and equality. The existence of a judiciary authority that is independent, with integrity and that is efficient and effective is imperative to implement legislations with the support of executive bodies which assume responsibility for enforcing decisions and rulings.

It is worthy to note that the judiciary system consists of formal courts, shari'a courts, and special courts. Judges are independent and there is no authority over their conduct of their judiciary functions except that of the law.

The executive authority, represented by the Legislation and Opinion Bureau at the Prime Ministry, handles the preparation, drafting and approval of laws, and their submission to the legislature for consideration, discussion and adoption. Once adopted, these laws are submitted to His Majesty the King for final endorsement, and then the executive authority announces and publishes them. Furthermore, the Legislation and Opinion Bureau undertakes the task of reviewing active legislations and presenting proposals for amendments whenever the need arises.

The complexity of life and the interrelationships amongst social and economic interests, as well as the growing strength of civic society requires the revision of many legislations to modernize them and ensure that they stay abreast with the needs for communication between citizens and cooperation with states. This calls observing the modern guidelines for developing legislation and reconsidering the mechanisms for preparing them as well as the need to provide qualified and distinguished competencies to handle the various stages of the legislative process; including the preparation, development and study stages.

This also calls for restructuring the judiciary apparatus and the provision of qualified and specialized skills, in addition to the development of the shari'a judiciary apparatus and the development of laws pertaining to the litigation proceedings thus leading to the fulfillment of the key mission of government; namely ensuring justice amongst all people leading a dignified life, protecting the public and private rights of citizens in line with the ethical and moral standards and values whilst preserving the basic constitutional principles of the Kingdom.

The Legislation and Justice Pillar comprised two sectors: the first relates to the Judiciary (Regular and Religious) and the second addresses the legislation, particularly the Legislation and Opinion Bureau, This pillar aims at: strengthening the state of law and institutions, and key mission of government; namely ensuring Justice amongst all people. It also targets improving the services of courts and the Legislation and Opinion Bureau in pursuit of excellence and elevating thee basis, tools and approaches for preparing, and drafting legislations to insure they are responsive to emerging conditions, comprehensive and fulfill the needs of Jordanian society as well as their harmony with the international conventions. This will be accomplished through: the adoption of policies pertaining to the development of legislations to meet developments and emerging conditions, improving the investment climate, enhancing the competitiveness of the national economy, and further develop the penal sanctions justice to be in line with the modern penal sanctions policy and the international human rights standards, as well as strengthening the family reconciliatory and advisory services and raising the efficiency and effectiveness of the judiciary apparatus.

The anticipated financial situation for the years 2011-2013 is listed hereinafter.

Summary of the Theme's Financial Status for 2011-2013 (1,000 dinars)

Sector	Total Cost		Expected Expenditure							
Sector	Total Cost	2011	2012	2013	Total					
Judiciary	76,957	20,489	9,908	11,357	41,655					
Legislation	470	55	51	155	261					
Total	77,427	20,544	9,860	11,512	41,916					

The 2007-2009 National Executive Program achieved noteworthy quantitative and qualitative development in the area of legislation and justice, the most considerable were:

Firstly: The Judiciary

The Formal Judiciary

- 1. Upgrading the infrastructure of the courts by constricting *Palaces of Justice* and model buildings in Irbid, Balqa, Karak and Jerash Governorates, and launching the execution of the second phase in Zarqa, Ma'adaba and Ajloun Governorates and Russeifah District.
- 2. Employing the *Information Technology* where computerized systems have been operated in all courts and linked to one network as well as building a central database.
- 3. Setting up units for civil claims in all first degree courts and judiciary mediation units in 6 first degree courts.
- 4. Enhancing citizens' access to justice by establishing new magistrate courts in most of the Kingdom's districts.
- 5. Further development of law education in universities and raising the minimum grade average for admission in law schools to 70%.
- 6. Institutionalization of the mechanisms of the "Judges of the Future" programme to attract and support competencies and excelling General Secondary Exam's graduates from all the kingdom's governorates and law schools who will be subjected to special preparation as a step to appoint them in the judiciary. The number of enrolled persons in the programme totaled (177) students out of which (101) were females.
- 7. Training and qualifying (513) judges on various legal issues in 2007, and (338) and (444) judges in 2008 and 2009 respectively.
- 8. Issuance of laws amending the "Law on the Formation of Regular Courts" and the "law on the Formation of Magistrate Courts".
- 9. Increasing the number of Judges to (760) judges in 2009 bringing the national average to 13 judges/100,000 persons as compared to the international average of 6.75 judges/100,000 persons.

- 10. A tangible improvement in the indicator on the period of litigation as it dropped from (191) days for the Magistrate Court cases in 2006 to (147) days in 2009. As for the First Degree Court cases it dropped from (382) days in 2006 to (310) in 2009.
- 11. An increase in the number of female judges to (46) in 2009
- 12. In the area of strengthening the independence of the judiciary, the indicator on the confidence of citizens, parties involved in litigation, lawyers and judges in the seriousness of the state's efforts to foster the independence of the judiciary increased from (78%) in 2005 to (83%) in 2008. The indicator on the perception of the advanced segments on the success of the state in realizing the independence of the judiciary increased from (70.8%) in 2005 to (78.8%) in 2008.

Shari'a Judiciary

- 1. Endorsement of the draft bylaw on Family Rehabilitation and Reconciliation
- 2. Finalizing numerous amendments to the legislations which will enhance the performance of the shari'a judiciary such as "The Civil Affairs Law", 'The law on the Formation of Shari'a Courts", "The Execution Law', "The Inherited Estates Bylaw", and the instructions on regulating the revenues/proceeds from inherited estates profits and execution of rulings.
- 3. Computerization of numerous aspects pertaining to the shari'a judiciary such as the financial and administrative systems, the typing in of the sessions proceedings/minutes, an electronic system for the inherited estates, an electronic system for the shari'a-based inheritances, a system for execution of based rulings and documentation and the archiving and computerization of marriage contracts and other shari'a-based contracts.
- 4. Appointment of 12 judges in 2008 bringing the total of shari'a judges to 163.

Secondly: The Legislator

- 1. Studying numerous draft laws proposals submitted to the Legislation and Opinion Bureau from the cabinet and auditing it to insure that they do not violate the constitutional and legal stipulations in force, as well as provide an expert opinion on them.
- 2. Issuing (111) laws and (238) bylaws and publishing them in the Official Gazette as well as providing (271) legal opinions.
- 3. Updating the electronic website of the bureau and launching a second website for the drafts of legislations to receive the remarks and comments of citizens and specialized persons.
- 4. Sending (13) legal researchers to get their doctoral and master's university degrees in the various specializations.

The legislation and justice were granted utmost importance in Jordan based on the criteria of "Good Judiciary" that is concerned with the independence and integrity of the judiciary

as well as its high efficiency and effectiveness which ultimately led to the present status being as follows:

- 1. The availability of a package of modern legislations that keep abreast with economic, social and political developments. These legislations are effective and transparent, protect the intellectual property rights and help attract more investments.
- 2. The establishment of the "Anti-Corruption Commission", the "Jordanian Ombudsman Bureau", the "Financial Disclosure Department" and the "Money Laundry Control Unit".
- 3. The availability of infrastructure and the geographic coverage of all the Kingdom's governorates and districts, in addition to promoting computerization and simplification of procedures in the courts and the execution departments.
- 4. Institutionalization of the mechanisms for the attraction, recruitment and specialization of the judges and their aids/support staff.
- 5. The availability of alternative methods for the settlement of civil and commercial disputes outside the courts' framework.
- 6. The interaction of the civic society organizations and the citizens with the laws and bylaws before their endorsement.

Challenges

In spite of the recognized achievements in the judiciary and legislation area, the following challenges still have to be faced:

a. Challenges Facing The Judiciary Sector(Formal and Shari'a):

- Deficiency in the numbers of specialized judges in the formal and shari'a courts and the judges of the public prosecution. This reflects negatively on the quality of the judiciary rulings
- The increase in the number of cases, the enormousity of the disputes and increasing loads for the judiciary work as a result of the complexity of social and economic relations as well as population growth as compared to the limited number of specialized judges.
- Most of the infrastructure of the courts does not meet the requirements of the judiciary work according to international best practices (the majority of court buildings are rented premises that do not suit the nature of the judiciary work; the Judiciary Institute is included here too)
- The outdated penal justice system which is not capable to deal with the social changes in the past five decades.
- The overlap between the courts, the public prosecution apparatus and the Public Civil Attorney Department.

b. Challenges Facing the Legislation Sector:

- Deficiencies in the numbers of qualified personnel in preparing and drafting legislation
- Absence of a specialized institute to train on preparing, reviewing and drafting legislations
- Weak prior coordination for legislations introduced particularly as a response to the requirements of the international conventions.
- Absence of, and weak prior agreement amongst the many institutions concerned with a
 particular legislation. This leads to failure to arrive at a clear legislative text that meets
 the needs of all concerned parties.

Long term objective

- 1. Strengthen the state of law and institutions and achieve the State's mission of establishing justice among people.
- 2. Improve the services of the courts and the Legislation and Opinion Bureau and more towards excellence.
- 3. Improve the basis, means and methodologies of legislation preparation and drafting to ensure their responsiveness to new developments in all areas, as well as their comprehensiveness and ability to meet of the needs of the Jordanian and conformity with the international conventions.

Short term objectives

a) Justice Sector (civil and shari'a judiciary):

- 1. Promote the independence and integrity of the judiciary
- 2. Improve Jordan's position with respect to international indicators in the judiciary field.
- 3. Develop human resources employed in the judiciary system and increase the number of specialized judges.
- 4. Improve the courts' infrastructure.

b) Legislation Sector:

- 1. Develop the basis of preparing legislations referred to the Legislation and Opinion Bureau and to accelerate their processing.
- 2. Build the capabilities of the personnel of the Legislation and Opinion Bureau and those working in legislations preparation and drafting.

Performance indicators on the intermediate objectives level were developed in order to measure the performance of the Legislation and Justice Pillar. These include:

Firstly: The judiciary (Formal and Shari'a judiciary)

Improvement and Development of the Business Environment

Jordan made important strides in the development of economic sectors with high development potentials. Jordan took several steps to improve and develop the business environment, especially in connection with promoting the national economy's competitiveness; attracting investments; and supporting industrial and service sectors as well as identifying appropriate mechanisms to raise their competitiveness, promote their growth and increase their revenues. However, such steps still encounter a set of challenges such as the weakness of the institutional framework of the business environment and empowerment of investments, the weakness the position of Jordanian products' in world markets and the weakness of basic infrastructure that attracts investments.

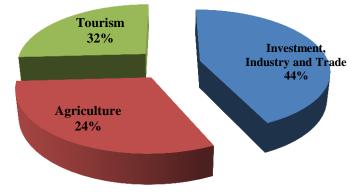

This pillars aims at improving and developing the business environment, enhancing the national economy's competitiveness locally and internationally, reducing the unemployment rate, providing job opportunities for citizens through the attraction of foreign and local investments in the industrial sector, labor-intensive export sectors, and services sector, in addition to developing and providing basic infrastructure which support industrial, touristic and agricultural investments.

This will be accomplished through a set of policies, programs and projects; most importantly through setting up an institutional framework for the business environment to ensure coordination between various investment and economic entities and policies; development of industrial cities and free zones; establishment of new development zones to serve the investment environment; and enhancement of partnership between the public and private sectors. This also includes attracting and empowering investments; supporting the industrial sector through the promotion of local industries; supporting new and small enterprises; developing targeted industrial sectors (pharmaceuticals, garments, food industries, stone and marble); preserving the Kingdom's cultural heritage through marketing Jordanian touristic products in world markets and enhancing their competitiveness regionally and globally; promoting investment in the agricultural sector; expanding the utilization of steep and rocky lands; developing agricultural and animal products; protecting plant wealth; raising the efficiency of agricultural production and quality improvement. Following is a summary of the theme's financial status for 2011-2013:

Summary of the Financial Status for 2011-2013

(1,000 JD)

Investment Development sectors Expected Expenditures' Percentage

First Sector: Investment, Trade and Industry

Jordan places special interest in the investment field and in improving its investment climate, as it is considered a basic foundation to achieve development goals, and a supporting element to the Government's efforts to improve living standards and decreasing unemployment rates. A number of policies and initiatives have been placed which aim at making Jordan one of the top countries that provide an advanced investment environment, through institutionalizing the decision making process related to investments, trade and promoting projects in Jordan, in order to draw more foreign direct investments and promote local investment, which in return leads to decreasing unemployment rates and develop the national economy. Moreover, the Government has defined its priorities in respect to its support to the service and industry sectors and defined the proper mechanisms to increase their competiveness, promote their growth and increase their revenue.

In light of the reforms pursued by Jordan to improve the business environment, the current situation could be outlined as follows:

Jordan witnessed a qualitative leap in respect to the contribution of the private sector in achieving economic growth, through the provision of legislation that govern the investment environment, provision of advanced infrastructure, and particularly the establishment of special development zones and industrial and free zones, in addition to signing several bilateral and multilateral trade agreements. Moreover, Jordan launched the Public-Private Partnership Program (PPP) in 2008. This Program is the main axis of the economic development strategy that the government adopted and reflected in all economic initiatives, when stressed on the need to improve and increase services provided by the government to attract investments and expertise from the private sector. The value of total investments benefiting from the Investment Promotion Law amounted to approximately 1,859 million Jordanian Dinars in 2009, while the value of total investments benefiting from the Investment Promotion Law during the years 2007 and 2008 amounted to 2,268 million Jordanian Dinars and 2,221 million Jordanian Dinars, respectively.

There have been many achievements in improving the business environment between 2007 and 2009, which reflected positively on the process of economic growth and employment, and on the increase in the volume of exports, notably:

- 1. Increase in the volume of investments in industrial cities to about 1.514 billion Jordanian Dinars in 2009.
- 2. The establishment of 7 specialized business incubators in partnership with various authorities in order to create incentives for beginners in the business field.
- 3. Laboratory accreditation and access to the Laboratories Institute for Standards and Metrology to examine chemical products and foods based on international accreditation.
- 4. The launch of the National Competitiveness Observatory and the establishment of the National Council for Competitiveness.
- 5. The establishment of three economic development zones (Irbid, Maan, Al-Mafraq).
- 6. Initiating the establishment of new industrial zones (Madaba, Zarqa, Aqaba, Al-Tufailiah) and the expansion of existing ones (Al-Muqar).
- 7. Development and expansion of free zones in various regions, including Al-Karama and Zarga.
- 8. Completion of the draft national strategy for investment, which outlines a clear investment map for the Kingdom over the next ten years, to measure and evaluate the performance, results and objectives of the investment process.
- 9. Opening of representative offices for the Jordan Investment Board n Kuwait, the United Arab Emirates and the People's Republic of China, and soon in Qatar.
- 10. Efforts are underway to increase exports through marketing and export promotion, and the implementation of 70 Exhibitions and business missions to include Arab countries, Europe, America and Central Asia.

- 11. Promoting Jordanian companies through international exhibitions, implementation of trade missions and participation in conferences and international meetings. The number of companies benefiting from the promotion of services and technical support amount to 630 companies. Moreover 57 memorandums of understanding were signed, in addition to many commercial contracts, through the promotion of services program.
- 12. Establishing 2 export houses) and providing support to the union of Dead Sea traders and exporters and the consortium of olive oil.
- 13. Establishing a specialized center for clothing concerned with developing design methods and training.
- 14. Signing and negotiating free trade agreements (Canada, Pakistan, MERCOSUR, etc...).
- 15. Completing the tax exemption programfor industrial production requirements and inputs, and overcoming obstacles and non-tariff barriers with Jordan's trading partners, which led to an increase in exports.

Challenges

Despite the achievements, Jordan's business environment continues to face the following challenges:

- Weak institutional framework for investments and a weak business environment
- The global financial crisis.
- Reluctance of the Jordanian youth to work in sectors that require physical effort or that are inconsistent with the community's culture.
- Lack of funding and shortage in qualified and trained staff.
- Lack of a central database of sectoral companies and small and medium enterprises.
- Jordan's weakness as a production site in relation to global markets and local communities.
- Higher input prices and production costs.
- Lack of marketing and limited resources related to implementation.

Therefore, concerted efforts between the public and private sectors are required to work on increasing investments with high added value and directed towards priority sectors, in order to create more job opportunities. additionally important of attracting foreign investments, as part of the Government's efforts to address the economic and social challenges, represented in the current trade balance deficit and the general budget deficit, as well as poverty and unemployment.

Long term objective

Provide an appropriate environment for business and investment, and to enhance the competitiveness of the national economy at the local and international levels.

Short term objectives

- 1. Improve and develop the business environment and promote its competitiveness.
- 2. Increase foreign and local investments
- 3. Empower small and medium enterprises and build their capabilities
- 4. Provide new job opportunities for Jordanians.
- 5. Increase the private sector's participation in the implementation of major economic projects in partnership with the public sector.
- 6. Develop the industrial sector.

Second: Tourism

Tourism is considered one of the development industries due to the role it plays in economic development, as it is a major driving force to other economic sectors. It is not possible to isolate the tourism sector from other service sectors such as trade, banking, transport, the media, information technology, insurance and other services connected with tourists' movement.

The tourism sector is also an important source for attracting foreign currencies, with the effect this has on the Jordanian balance of payments. It also attracts investments as well as investment in infrastructure and qualification of the natural environment and cultural and historical antiquities. As a result, tourism contributes to the preservation of the county's architectural heritage, tourism also contributes to creating job opportunities directly and indirectly, as tourist activities lead to the creation of new jobs in the field of tourism or related fields through the rising demand on tourist products, which also inevitably leads to further investment in the tourism sector and its geographical distribution in various regions. In addition to the above, tourism is a human activity with social, cultural and intellectual effects facilitating the dialogue of cultures and civilizations as well as spreading understanding among peoples and development of noble human values based on peace and mutual respect.

Jordan's central geographical and strategic position, its nature, rich cultural heritage and abundant archaeological sites with prominent significance constitute pillars for the tourism sector. Indeed, Jordan is a large historical museum filled with religious, cultural, architectural, , and natural landmarks forming the major constituents of tourism in Jordan, thereby allowing for the following types of tourism in Jordan:

- 1. Cultural tourism related to antiquities and heritage.
- 2. Religious tourism.

- 3. Environmental tourism.
- 4. Ventures tourism.
- 5. Medical treatment tourism.
- 6. Conference tourism.
- 7. Familial tourism.

The number of tourists who visited Jordan in 2009 reached 7.084 million tourists compared with 7.10 million tourists in 2008, with a decrease of 0.2% due to the decrease in the number of one day tourists by 2.3%. Meanwhile, lodging tourists' number increased by 1.6%, who presented 53.3% of the total number of tourists, against 48.4% of one day tourists. This indicates Jordan's importance as a tourism destination, and a linking point for regional and international tourism.

Tourism revenues amounted to JD 2.67 billion in 2009, compared to 2.88 billion in 2008, with a decrease of 1.1%. Comparing the increase of income with the increase in the number of tourists, it appears that the growth in tourism income is higher than the increase in the number of visitors and Dead Sea tourists by three times. Moreover, the source of nearly 43.6% of tourism income in 2009 is from Arab tourists, 28% from foreign tourists, and 28.4% from Jordanian tourists residing out of the country. Accordingly, the importance of the Arab market as a source for tourism income relatively decreases in comparison with its importance as a source of tourists in terms of the number of tourists. In this context, the revenues from touristic and historical sites reached 16.053 million JDs in 2009, compared to 18.951 million JDs in 2008, i.e. with a decrease of nearly 15%. Direct employment opportunities in the tourism sector registered an increase of 6%, as employees in the sector reached 40 thousand, compared to 38 thousand employees in 2009.

The tourism sector scored numerous achievements in 2007-2009 the most important of which were the following:

First: Competitiveness and enhancement of Jordan's status on the global tourism map:

- 1. Selection of Petra as one of the New Seven Wonders of the World.
- 2. Working out an integrated electronic marketing plan for the tourism sector.
- 3. Implementation of external advertising campaigns in all countries and participation in specialized tourism exhibitions and fairs.
- 4. Launching a publicity campaign through various channels under the motto: "Jordan Welcomes You".
- 5. Working out a strategic plan for tourism marketing.
- 6. Completion of a national system for tourism information.
- 7. Holding the First Jordanian Travel Fair at King Hussein bin Talal Conference Center in the Dead Sea area.
- 8. Launching the website of the Jordan Tourism Board in six foreign languages and the website of Petra Archaeological Protected Site.

Second: Development of tourism products and infrastructures:

- 1. Starting to develop the third tourism project which is aimed at placing five Jordanian cities on the national tourism map at a cost of US\$ 71million.
- 2. Completion of the Tourism Sector Development Project (the Japanese Project) through which numerous facilities have been developed. Such facilities constitute an important addition to Jordanian tourism products in Amman, Salt, Ma'daba and the Dead Sea as well as the establishment of several specialized museums including Karak Fortress, Dead Sea

- Panorama and Salt Historical Museum in addition to the National Museum in Amman, which is due to be completed at the end of this year to form the gate to Jordanian tourism.
- 3. Completion of the Cultural Heritage Promotion Project, which has been developed at Um Alrisas, a World Heritage Site, and equipping it with all facilities which serve visitors as well as the completion of Allahoon Museum.
- 4. Completion of Dar Alsaraya Museum in Irbid and Lot Museum, the lowest museum on earth in Ghor Alsafi.
- 5. Launching the Tourist Tracks project, which is targeted towards the local market and is aimed at enhancing local communities' participation in the tourist process and integrating them into tourist activities and programs. Besides, the Salt Track and Rasoon Track have been placed on the Jordanian tourist map.
- 6. Starting to implement the National Plan to Develop Jordanian Tourism Products.

Third: Provision of the legislative and institutional environment needed to develop the tourism sector's performance:

- 1. Issue of a new regulation for the Tourism Promotion Authority.
- 2. Issue of the regulation of the Petra Archaeological Reserve.
- 3. Launching the Strategy to Manage the Archaeological Heritage in Jordan.
- 4. Development of a geographical database of archaeological and tourist sites in Jordan.
- 5. Carrying out programs to qualify and train human resources and completion of the hotel institute project.

Challenges:

Despite the achievements, the tourism sector is facing many challenges, including

- Competition at regional and global level, taking into account the vulnerability of promotion and marketing allocations compared to those States.
- Provision of appropriate tourist facilities within the reach of local tourism.C
- Concentration of investments in tourism in specific areas (Amman, Aqaba and the Dead Sea) with the difficulty of attracting tourism investments in other tourist locations.
- The integration of local communities as an actor in the process and the lack of tourism awareness among the citizens of the importance of the national heritage of Jordan and the preservation of the environment.
- The large gap in the modern technical support (equipment) to be used to preserve the historical and cultural heritage.
- Lack of qualified personnel to promote the tourism sector as a promising sector.

Long term objective

- 1. To develop and provide tourism infrastructures and facilities.
- 2. To preserve the Kingdom's cultural heritage and market it globally.
- 3. To develop and improve the tourism investment climate.
- 4. To integrate local communities into the development and planning processes.

Short term objectives

- 1. To diversify touristic products to reflect the diversity and richness of tourism components and sites in Jordan.
- 2. To provide an operational and management framework to improve the performance of touristic sites and their basic services.
- 3. To access promising tourism markets.
- 4. To increase touristic investments

Third: Agriculture

The agriculture sector in Jordan is characterized by the diversity of production methods and techniques. This sector contributes 3.3% of GDP at constant prices. The value of agricultural exports increased by 25% last year.

Moreover, 5.6% of the total labor force works in this sector

Agricultural development plays an important role in conserving biodiversity and vegetation, and in preventing the risk of desertification, and climate change, in addition to limiting their consequences on the environmental balance. Agriculture is also key to the Kingdom's food security, as Jordan is self-reliant on vegetables, fruits, white meat (chicken), eggs and olive oil.

His Majesty King Abdullah II announced 2009 the year of agriculture, given the economic, social and environmental importance of this sector and its close link with food and social security. Accordingly, the Ministry of Agriculture, in cooperation with partners in the sector, prepared a paper on agriculture for the upcoming years that contributes in developing this sector.

Major Agricultural Indicators for 2009

Indicator	Value in 2009
Agricultural workforce (thousand)	120
Loans by the Agriculture Credit Corporation	27000
Area of land actually cultivated (thousand)	2730
Area of land cultivated with crops (thousand)	438
Area of land cultivated with vegetables (thousand)	471
Area of land cultivated with fruit trees (thousand)	526
Area of land cultivated with olives (thousand)	1295
Area of land with plastic green houses (thousand)	33
Total agricultural exports (million JD)	582
Total food exports (million JD)	513
Total exports (million JD)	3573
Total imports (million JD)	9993
Total agricultural imports (million JD)	1729
Total food imports (million JD)	1456
Percentage of agricultural exports	16%
Percentage of agricultural imports	17%
Agricultural deficit	1147.4
Agricultural imports quantitative record (1994=100)	190.4
Agricultural imports price record (1994=100)	188.2
Agricultural exports quantitative record (1994=100)	270.6
Agricultural exports price record (1994=100)	208.1
Number of registered agricultural companies	593
Capital of registered agricultural companies (million JD)	161.6

The agriculture sector accomplished many achievements over the period 2007-2009, most importantly:

First: legislations regulating the sector

Laws and Regulations

- 1. Regulation on regulating the use of lands/ Statute of Land Use Regulation.
- 2. Regulation on classifying protected wild birds and wild animals according to their degree of protection.
- 3. Animal welfare law.

- 4. Law of the Animal Wealth Support Fund.
- 5. Law of Risks Fund for Farmers.
- 6. Law on Veterinarians Union.
- 7. Amendment of regulations issued in accordance with the Law of Agriculture.
- 8. Amendment of the Law of Sales Tax to exempt 35 production inputs from sales tax.

Second: Agricultural resources for the year 2009

- Reclamation of 15,835 dunums of agricultural land, from which 2,767 farmers benefited.
 4,767 dunums were planted with fruit trees.
- Digging water collection wells with a storage capacity of 84,226 m3, and maintaining and creating irrigation canals with a length of nearly 45km, and building one soil embankment whose storage capacity is nearly 500 m³, and building 3 soil depressions with a capacity of 750 thousand m³.
- Production of 279,312 fruitful plants and 16300 decorative plants and production of 4.319 million plants that were planted in forest and pasture land for both the public and private sectors.
- Protection of existing forest resources.
- Building agricultural roads with a length of 15 km.
- Continuation in implementing the Field Crops Subsidy Project.
- Provision of preventive services and implementation of campaigns to combat agricultural pestilences, where about 145 million sterile insects have been released within the project to combat the Mediterranean fly.

Third: household food security and fight against poverty:

- 965 families benefited from these projects: (hybrid goat, water harvesting, poultry) in various regions of the Kingdom.
- compensation of 576 frost-affected farms with a total cost of 418 thousand Dinars.

Fourth: Animal wealth

- Provision of veterinary services to owners of 6.65 million animals by providing necessary inoculations and treatment.
- Rehabilitation and expansion of veterinary clinics and animal health laboratories (total number of 13 in all governorates) and provision of 40 mobile veterinary clinics.
- Continued implementation of the National Numbering Project aimed to track the health status of livestock. Nearly 600 thousand sheep, goats, cows and camels have been numbered.

Challenges

Despite achievements, the agriculture sector still faces several challenges and difficulties, including:

- Unsuitable weather conditions, high agricultural risks, and consequent drought years.
- Continued decline in areas of agricultural land as a result of urbanization, fragmentation of land ownership, and low productivity due to high salinity levels.
- Widening of the food gap (between output and the actual needs).
- Low amount of water allocated to agriculture and the fluctuation of rainfall from year to year.

- Unwillingness to take up agriculture as a profession, and low capacities of agricultural workers (local and expatriate).
- High costs of agricultural production.
- Misuse of pastureland and encroachment on forest and agricultural lands.

Long -term Objectives

- 1. Achieving food security at the household level, poverty alleviation and addressing unemployment.
- 2. Creation of the right climate for investment in the agriculture sector.
- 3. Achievement of sustainable agricultural development.

Short -term objectives

- 1. Preserving and developing agricultural resources.
- 2. Increasing self-reliance and improving the agricultural trade balance.
- 3. Increasing the efficiency of agricultural production and improving the quality.
- 4. Providing the right institutional environment for agricultural development.
- 5. Providing health protection for livestock.
- 6. Contributing to rural development.
- 7. Enhancing economic opportunities for agricultural producers and pursuing local and international business opportunities.
- 8. Contributing to the achievement of food security at the household level and reducing poverty and unemployment.
- 9. Appropriate agricultural technology transfer and diffusion to the farmers.

Policies

- 1. Promoting investment in the agricultural sector.
- 2. Expanding the utilization and reclamation of sloping and rocky lands.
- 3. Providing health protection for animal wealth and developing agricultural animal products.
- 4. Protecting plant resources/wealth, providing productive and improved seedlings and developing plant agricultural products.
- 5. Raising the efficiency of agricultural production and improving its quality.
- 6. Reducing the effects of risks and hazards facing agricultural producers .
- 7. Developing and promoting specialized and applied agricultural research and transferring results to the agricultural sector's employees.
- 8. Preserving forest wealth areas and plant cover.

Administrative, Financial and Monetary Reforms

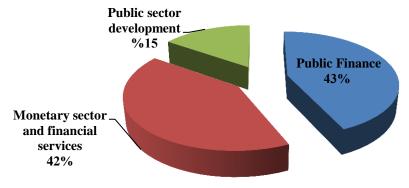

The realization of economic and social development is linked to the degree of development of administrative, financial and monetary services as well as supporting financial services. The development of this sector's institutions leads to the increase in savings and their efficient distribution over investments that yield the highest returns to the national economy.

The pillar of administrative, financial and monetary reforms faces numerous challenges. Key among these in terms of the public sector are the following: the inflation of the public sector and branching of government bodies, multiple institutional modes, the continued culture of the employment-based society and rising demand for public jobs. At the financial and monetary level, challenges include the impact of the global financial crisis on the national economy, in addition to the chronic deficit in the publi budget, rising ratio of public expenditure as a ratio of total expenditure, rising internal and external public debt levels and their effects on the economy.

At the level of the public sector, this pillar aims at the development of an organizational structure for the public sector characterized by transparency, flexibility, efficiency, effectiveness, harmony and the direction of policies, programs and projects in line with national objectives and priorities. At the financial reform level, the objectives are the sustainability of financial stability, increased self-reliance, safeguarding the public money and enhancing control over it, establishing monetary and banking stability in the Kingdom, the development of financial services, as well as enhancing the level of technical and legislative infrastructure level in the capital market. This will be achieved through the ensuring financial stability, reducing the public debt, improving financial administration, promoting the customs administration and tax revenues, harmonizing the interest rates structure in the monetary market with economic activity, promoting the application of the rules of institutional governance to all banks while monitoring the assessment of compliance with them, protecting the insurance sector's stability and strengthening trust in it as well as ensuring continued efforts to deepen the capital market. The following is a summary of the financial status of the pillar during 2011-2013:

Summary of the Financial Status for 2011-2013 (1,000 dinars)

Contan	Total Cost	Expected Expenditure						
Sector	Total Cost	2011	2012	2013	2011-2013			
Public sector development	33,696	4,484	2,251	7,514	14,249			
Public finance	85,020	16,352	12,153	11,810	40,315			
Monetary sector and financial services	100,790	20,100	10,565	7,840	38,505			
Total	224,164	40,936	24,969	27,164	93,069			

Expected Expenditures' Percentage for sectors 2011-2013

First Sector: Public Sector's Development

The importance of developing the public sector lies in strengthening the ability of ministries and government departments to focus their attention on their basic responsibilities. This is in addition to preparing and implementing a policies and procedures system reflecting national priorities and the optimal use of financial resources while also emphasizing achievement of objectives. This can be achieved through the review and building of the public sector's organizational structure, the improvement of its its services and development of its human and financial resources and on the basis of standards of excellence and the mechanisms of accountability, transparency, decentralization, partnership with the private sector and civil society institutions, encouraging innovation and excellence, seeking government services' automation this incentive that all the above lead to a government administration which is guided by results, geared towards the citizen and operating with efficiency, effectiveness and transparency and is subject to accountability.

The responsibility to develop the public sector lies primarily on all the Government public administrations in the Kingdom. Other national institutions outside the government's machinery, such parliament and private sector institutions, can also contribute to this objective. However, responsibilities vary according to the roles played by institutions in this respect. These roles are divided into two levels: the first level is concerned with developing policies and leading the efforts of developing the public sector in addition to the provision of technical support, creating an appropriate environment for as well as incentivizing the implementation of programs. The second level is concerned with the implementation of programs and ensuring their sustainability. The following table sets out the division of responsibilities by entities:

Entity	Responsibilities
The Ministry of Public Sector	Administration of the public sector's development programs
Development	and identifying the public sector's development policies
Civil Service Bureau	Participation in the formulation and implementation of human
	resources policies
National Institute for Training	Participation in the identification and implementation of
	institutional capacity building policies for government
	departments
Government Performance	Government performance assessment and monitoring
Monitoring Administration	
Ministry of Communications	Implementation of the electronic government's program and
and Information Technology	participation in the automation of services
King Abdullah II ibn Al	Promotion of a culture of excellence and incentivize
Hussein Center for Excellence/	government institutions to develop their performance and
King Abdullah II's Award for	support the public sector's development initiatives and
Government Performance's	programs
Excellence and Transparency	
Ministry of Finance and its	Enhancing the efficiency of expenditures, improving revenues
departments	sources, realization of financial stability and linking budgets to
	results
Ministries, government	Implementation and monitoring of all relevant public sector
institutions and departments	development programs

Human resources administration and development in the public sector is supervised by the Ministry of Public Sector Development, the Civil Service Board, the National Institute for Training and other competent entities. These various authorities coordinate for the purpose of supervising projects and programs which aim at developing the public sector and providing the technical support to governmental organs for the implementation of human resources methodologies application so that human resources in the civil service are organized and the needs for jobs are identified according to replacement programs and job circulation.

In order to keep apace the economic, social, political and housing needs and developments in the Hashemite Kingdom of Jordan, the jobs structure has developed and expanded during the past few years, as shown in the following table:

Growth of the number of jobs and employees in civil service and their rate to the population in Jordan

Year	Population	Jobs	Applicants	Leavers	Appointed persons	Employees	Applicants/ Population Rate	Appointed persons /applicants rate	Jobs/ Population Percentage
2007	5723000	177003	178059	8535	11062	149899	3.09%	6.21%	3.09%
2008	5850000	179975	191475	6672	10024	181382	3.08%	5.24%	3.08%
2009	5986618	192947	203476	7295	10666	191695	3.40%	5.24%	3.22%

The most prominent units accomplishments in the public sector in the period 2007-2009 include the following:

- 1. Establishment of policy units and development of the institutional performance to support decision-making mechanisms in 15 departments.
- 2. Establishment of ombudsman bureau in 2008.
- 3. Re-structuring of 50 government departments.
- 4. Enactment of the Civil Service Statute No, 30 for 2007.
- 5. Enactment and publishing of the Job Conduct Code and the ethics of the public job.
- 6. Preparation of the National Electronic Guide and Program to monitor and assess government performance.
- 7. Training more than 500 employees from various public sector institutions in all domains pertaining to the support of decision-making mechanisms. The training focused on the National Agendas and Jordan First documents as well as strategic planning methodologies, performance monitoring and evaluation, and the National Electronic Program to Monitor and Assess Government Performance.
- 8. Participation in reviewing and developing the strategies and programs of action of 40 institutions and ensuring their conformity with the Royal letters designating the Prime Minister, National Agendas and *Jordan First*.
- 9. Qualification of 20 government departments to apply for the King Abdullah II Award for Government Performance, Excellence and Transparency through the National Institute for Training. The number of participants was 775.
- 10. Implementation of 1,105 training programs and workshops through the National Institute for Training in the fields of development of administrative skills, communications skills, typing using the computer, dealing with the public, orientation of new employees, preparation and qualification of administrative leaders, strategic planning as well as monitoring and evaluation. The number of trainees was 20,664.

- 11. 46 electronic services have been launched at a number of institutions such as the Income Tax and Sales, Jordanian Customs, Ministry of Industry and Trade, Land and Surveying Department and Government Tenders Department.
- 12. 112 government institutions have been connected to the electronic government's portal and 33 electronic services have been activated. There are now 1,800 information services at the portal in Arabic and 899 information services in English.
- 13. Information and work manuals have been issued, and among the important ones are: Instructions on Job Specification and Classification, Employment of Workers with Daily Wages, Human Resources Planning, the Granting of Additional Allowances, Recruitment and Appointment, Official Working Hours, Annual Leave and Leaving Permits and Forms, Dispatching Employees in Scholarships and Training Courses, Guide on Government Services Improvement, the Use of Qualifications Marketing, Job Codification, Dispatching, the Specialized Reference, the Use of the Employee's Card, Job Specification Card and Electronic Human Resources Planning Forms, and Placement of Third Category Employees.
- 14. Launch of the electronic information card for each civil service employee for the purpose of completing and correcting information on human resources.
- 15. Activation the individual performance assessment management process and development of the criteria and forms used.
- 16. Promotion and development of job description tools and review of job descriptions and automation of civil service jobs.
- 17. Completion of the first stage of the unified Human Resources Management Information System (HRMIS).
- 18. Activation of the National Communication Center in cooperation with the Ministry of Communications and Information Technology.
- 19. Provision of the infrastructure for the electronic testing system.
- 20. Establishment of the Electronic Archiving System and its activation for archiving all civil service employees' files, employment applications and job leavers and connecting all departments to this system.
- 21. Addressing dislocations in the employment process in the civil service.
- 22. Re-structuring salaries and allowances in the civil service.

Challenges:

Despite the above achievements, the public sector continues to encounter numerous challenges; most important of which are the following:

- Inflation and branching of government institutions and multiplicity of institutional modes.
- Institutional weaknesses and rapid succession of political leaderships for public sector development.
- The disconnection between legislation and changes made to the public sector
- The weakness of the legal umbrella regulating the work of the institutions concerned with developing the public sector and their limited mandate
- Weak administration and accountability relating to the commitment towards and completion of public sector development programs at all ministries and institutions.

- Weak monitoring and assessment mechanisms and limited ability to identify performance indicators in the public sector.
- Limited financial and administrative resources and the infrastructure needed for the process of developing the public sector.
- A weakness in institutionalizing coordination and the failure to apply the partnership approach by the entities concerned with the development of public sector institutions.
- Change-resisting culture in society, limited experience in technological applications and use of electronic government applications in a practical manner to serve the citizen.
- Weak commitment to the application of the documents on Policies for the Public Sector's Development document and the General Policies for Human Resources Management.
- The weakness in public sector productivity and efficiency and its negative consequences on Jordanian rankings in international reports of relevance.
- Weak human resources management and development units at government institutions, multiplicity of institutionalized organization of human resources management and development and limited interest and leadership response at ministries and departments to human resources programs and developments.
- Overlapping and duality of the functions and responsibilities of the entities involved in human resources development in the public sector.
- A lack of harmony between the training and qualification plan and the training needs of public sector institutions.
- Absence of clear bases for the establishment or removal of government institutions and the growing trends towards moving away from the umbrella of the civil service of government entities without there being any bases or criteria for such independence.
- Continued culture of the job-based society and increasing demand for government jobs.
- Weak competitive capacity and job benefits of the civil service machinery and the ease with which well-qualified employees move to institutions in the public and private institutions outside the civil service machinery.

Long term objectives

- 1. Development of an organizational structure for the public sector characterized by transparency, flexibility, efficiency, effectiveness and harmony.
- 2. Orientation of policies, programs and projects in conformity with national objectives and priorities.
- 3. Improvement of the quality of government services.
- 4. Recruitment of qualified and competent human resources.

Short term objectives

- 1. Development of the structure of government machinery at the institutional and sectoral levels.
- 2. Enhancement of the government machinery's performance efficiency and effectiveness and empowering it to use transparency and accountability tools.

- 3. Improvement of the performance and capacity building of government institutions and their human resources
- 4. Development of recruitment mechanisms and human resources' management, qualification and assessment.
- 5. Upgrading of the level of government services and the promotion of electronic government applications.
- 6. Institutionalization of monitoring, evaluation and decision-making mechanisms at all public sector institutions and the Council of Ministers.

Policies

- 1. Provision of legislations and technical instruments needed to develop the public sector.
- 2. Raise the level of government services and simplifying their procedures and their automation.
- 3. Retain qualified personnel in the civil service.
- 4. Enhance the sense of responsibility and commitment to employees' public job ethics.
- 5. Complement employment with actual needs and human resources development.
- 6. Commit to the application of government performance monitoring and assessment mechanisms.
- 7. Improve Jordan ranking in international indicators related to public sector development.
- 8. Promote initiative taking and creativity at public sector departments.

Second: Public Finance Sector

During the years 2008 - 2009, the global economy encountered numerous challenges including rising global prices of oil and foodstuff, the beginnings of the global financial crisis which had adverse effects on both developed and developing countries. Jordan was equally affected given the openness of the Jordanian economy to the outside world and the diversity of economic relations with various countries in the world.

The 2009 public budget deficit was estimated at about 10% of GDP, before aid. However, a set of developments arising from the world financial crisis and the need to inject more funds through the public budget in order to maintain minimum positive economic growth rates led to an increase in the public budget deficit to about 10.3% of GDP. While the measures adopted allowed for an increase in the public budget deficit, they additionally contributed to strengthening the bases of monetary and fiscal stability in Jordan.

The public debt's ratio to GDP at the end of 2009 reached about 54%, of which a large proportion was local internal debt and due to rising rates of financing the public budget deficit during the current year.

With regards to the simplification of measures for citizens and investors, numerous services were developed during the past period. For instance, SMS services were introduced into the Lands and Surveying, the Jordanian Customs, Public Supplies Departments and the Unified Purchasing Department. In addition, the safe network was activated, the electronic website of the Public Requisitions Department and the filing system used in it have been connected, the customs service's system (Automated System for Customs Data- Asycuda)and the electronic monitoring service at a number of customs centers were implemented. Moreover, the second phase of the electronic payment system was initiated which will contribute to a facilitating the processes of revenues payment and provide citizens and investors with ample flexibility to carry out their work.

Moreover, the Government Procurement Department and the Public Supplies and Unified Purchases Department have started to apply the electronic transmission method to open tenders. These departments have also submitted the draft Government Purchases Statute to the Council of Ministers and applied the electronic archiving system as well as the unified purchasing document as a reference as best practices. The Public Supplies Department and the Unified Purchases Department have implemented several projects and programs which facilitate service provision to both citizens and investors equally through the activation of the electronic purchasing system, the warehouses management system, in addition to the adoption of a new organizational list for payment to suppliers and the completion of electronic connections with other departments.

Following are the main achievements in the public finance sector during the years 2007-2009:

First: Public Finance

- 1. Implementation of the Ninth and Tenth Agreement on Debt Swap with Germany for the implementation of development projects amounting to Euro 20.5 million and at with a 50% discount rate.
- 2. Commitment to issuing Quarterly External Debt Statistics (QEDS). Jordan is considered an advanced country in the field of debt statistics.
- 3. Completion of the main phase of the Unified Treasury Account project through the signature of an agreement with a commercial bank in Jordan to move the accounts of departments and financial centers in the governorates to one Unified Treasury Account.

- 4. Preparation of the public budget according to the concept of the medium-term financial framework and in a manner that reflects fiscal policy objectives and limits fiscal deficits on the short and medium terms.
- 5. The preparation of the public budget in accordance with the concept of a results-guided budget with a view to allocating financial resources efficiently through connecting the programs and projects of ministries and government departments with their strategic objectives.
- 6. Continue in the preparation of the budget according to results-oriented budget concept in order to allocate financial resources efficiently by linking programs and projects of each ministry and government department strategic
- 7. Adoption of an advanced chart of accounts for the items in the public budget and which conforms with the latest international standards and practices in relation to the classification of expenditures and in order to achieve the greatest degree of transparency and inclusiveness of the public financial data and improve the management level of public finances.
- 8. With a view towards enhancing the efficiency of public finances and providing a comprehensive database of all financial data for ministries and government departments, the implementation of the last stages of the Government Financial Management Information System (GFMIS) have started

Second: Financial Reforms

- 1. Computerization and connection of financial centers in the governorates and districts with the centre in relation to pension, public finances as well as buildings and lands tax with a view to providing an integrated service to citizens in their places of residence.
- 2. Activation of a number of services at the Ministry of Finance to include SMS services, spoken service, pension services screens as well as the computerization and connection of several financial systems.
- 3. Starting to apply E-payment through the expansion of public revenues collection methods including payment using credit cards and through the internet.
- 4. Development of the work flow system through the automation of work procedures and doing away with paper transactions so as to reduce effort and time for the customer to include all directorates and centers of the department in various governorates and districts in Jordan.
- 5. Launching the project on the Management of Government Stock Department and the coding and classification of supplies.
- 6. Activation of the safe network and connecting the Department's electronic websitedepartment's and the archiving system used by the Public Supplies Department.
- 7. Computerization of processes at the Pensions and Compensations Department,
- 8. Application of a new mechanism to estimate value and enhance the efficiency of collection of charges at the Lands and Surveying Department.

Third: Financial Legislations

1. With a view to activate the role of monitoring units at the ministries, departments and other government institutions in safeguarding the public money, Regulations No. 6 of 2009 / Regulations Amending the Applied Regulations for Financial Affairs No. 1 of 1995 were issued.

- 2. With a view to complete the database of taxpayers and ensure access to all categories subject to the provisions of the income tax law, Regulations No. 5 of 2009 / Regulations Amending the Applied Regulations for Financial Affairs No. 1 of 1995 were issued.
- 3. For the purposes of tax reforms, legislations and taxes standardization and the application of an integrated tax legislation which achieves the highest degree of justice and transparency, fundamental amendments were introduced to the Income Tax Law and General Sales Tax Law in 2009 and were approved early in 2010.
- 4. Jordan entry into the final stages of the Government Purchases Agreement (GPA).
- 5. Signature of memorandums of understanding with a number of countries in the field of customs and facilitating a series of supplies and combating smuggling with a number of countries.
- 6. Activation of the role of customs in the field of intellectual property protection and combating smuggling and illegal activities.

Challenges

Despite the above achievements, the public finance sector continues to encounter numerous challenges most prominent of which are the following:

- Chronic deficit in the public budget.
- The impact of the global financial crisis
- High volume of the public debt (internal and external) and in absolute figures
- Distortions and imbalances in the public budget
- The advancing nature of smuggling methods at the world level and which make use of the advances in technology in addition to the increase in cases of customs evasion and commercial deception.
- High ratio of current expenditure as a ration of general expenditure.
- Multiplicity and diversity of financial statutes and legislations for entities subject to monitoring

Long term objectives

- 1. To contribute to the development of the Jordanian economy to become prosperous and open to regional and global markets
- 2. To contribute to the enhancement of the government administration to become financially stable as well as transparent and accountable at the central and local levels

Short term objectives

- 1. To preserve financial stability and increase self-dependence
- 2. To protect the public money and enhance monitoring over it

Third Sector: Monetary Sector and Financial Services

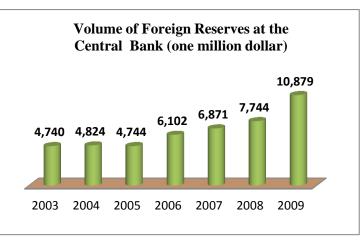

The monetary and financial services sector has contributed to the process of economic development in Jordan through a number of accomplishments with direct and indirect impact on local economic growth. The Central Bank of Jordan has continued the application of its flexible monetary policy aimed at the maintenance of monetary stability and ensuring the safety and soundness of the banking system. This policy was characterized during the period 2007-2009 by flexibility and interaction with economic developments, especially rising oil and basic commodity prices and the repercussions of the global financial crisis. Regarding the banking policy, the Central Bank adopted further measures that aimed at raising the standards of banking institutions and enhancing their capabilities to manage risks in accordance with the best international standards.

On the other hand, the Jordanian financial institutions contributed to the provision of financial services that enhance the Jordanian economy's capacity to grow, develop and keep abreast of the best international practices. Such institutions are mainly active in ensuring customers' deposits, loan assurance, exports credit and re-financing housing loans. Capital market institutions, represented by Amman Stock Exchange, the Securities Depository Center and the Securities Commission, regulate financial mediation operations between savers and investors and therefore incentivizing and promoting national investment.. On its part, since its inception, the Securities Commission has sought to issue legislations and undertake measures with a view to develop and regulate the market. In the insurance field, the Insurance Commission supervises a large number of insurance companies which practice various types of insurance. In addition, the Insurance Commission supervises supporting insurance service providers and seeks to organize and develop insurance services in the Kingdom with a view to maintain the insurance sector's stability and to protect the rights of the insured. Following are the entities involved in the monetary sector and financial services:

First: The Central Bank of Jordan and the Banking System

The Central Bank undertakes the protection of monetary stability represented by the Jordanian

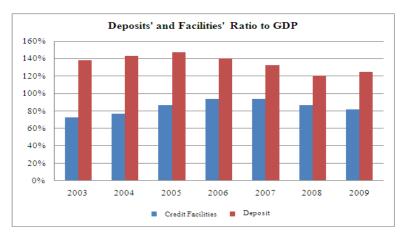

dinar's exchange rate, containing inflationary pressures and the provision of an interest rate structure that strikes a balance between containing inflationary pressures and stimulating economic development. To realize the stability of the exchange rate, the Central Bank has adopted the fixed exchange rate regime for the Jordanian dinar against the US dollar. This regime has proved to be the most suitable and optimal for the Jordanian economy through enhancing confidence in the Jordanian dinar as an attraction for local savings as well as enhancing the competitiveness of national

exports and attracting local and foreign investments. This has led to foreign reserves reaching unprecedented levels of US\$10.9 billion at the end of 2009.

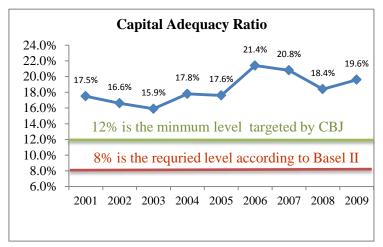

As for the banking sector, there are 23 banks operating in Jordan as of the end of 2009, including two Islamic banks and eight branches of non-Jordanian banks. All these banks perform their activities through 619 branches and 66 reprehensive offices throughout the Kingdom. It is also worth stating that three foreign banks have been licensed. The ratio of total banks' assets at the end of 2009 was about 196.5% of GDP, while the ratios of deposits and facilities to GDP were 113.9% and 74.15% respectively.

Banking activities have undergone remarkable expansion. The cumulative licensed banks' budget reached 32.0 billion Jordanian dinars at the end of 2009, an increase of 2.16 billion dinars, i.e a 7.3% of the level registered at the end of 2008. The existing balance of total facilities at the end of 2009 amounted to 13.3 billion Jordanian dinars, while the total deposits of licensed banks at the end of 2009 were 20.3 billion Jordanian dinars.

To address the repercussions of the global financial crisis on Jordan's economic growth prospects in 2009, the Central Bank adopted in November 2008 a set of gradual measures most important of which were the reduction of interest rates on various monetary policy instruments five times by 50 basis points each time, as well as the reduction of the compulsory monetary reserve rate on deposits to reach 7%. All such measures provide banks with further space to expand the granting of credit to various economic sectors and projects, which in turn supports economic growth, Furthermore, the Central Bank stopped issuing certificates of deposit from October 2008so that their balance fell from 2.5 billion dinars at the end of September 2008 to 150 million Jordanian dinars at present, which has led to pumping more liquidity into the national economy.

The Central Bank's oversight of the banking sector complements latest international oversight standards. The control and regulatory frameworks reflected a commitment to international monitoring and accounting standards. Moreover, interest increased in risk management, control and audit in addition to combating laundering money operations, as well as the application of institutional governance principles.

In this respect, the Central Bank targets a number of financial soundness indicators, including the capital adequacy ratio.

The Central Bank targets the capital adequacy ratio at a minimum level of 12% against 8% in accordance to Basel II Committee's Decisions.

Second: Non-banking Financial Institutions

Non-banking financial institutions include the Jordan Deposit Insurance Corporation, the Jordan Loan Guarantee Corporation, and the Jordan Mortgage Refinance Company. These institutions aim at encouraging savings and strengthening confidence in the banking sector. The Jordan Deposit Insurance Corporation provides protection of deposits at the licensed banks in accordance with the corporation's provisions of law for the year 2000. Data indicates rising deposits' value subject to the provisions of the corporation's law to 12,823.6 million Jordanian dinars or 80.8 % of the total

deposits in Jordanian dinars of the banking sector at the end of December 2009 compared with 11,017.2 million Jordanian dinars or 82.5% of the total deposits in Jordanian dinars at the end of 2008; a growth rate of 16.4%. It is worth-stating that the fully-guaranteed deposits constituted 11.5% of the total deposits subject to the corporation's provisions of 2009, and that the guaranteed deposits belong to about 1,7 million depositors forming 92.6% of the number of guaranteed depositors.

The Jordan Loan Guarantee Corporation provides the guarantees needed to improve the credit environment available for economic projects, national exports and the small and medium—size business community. Within In the Loan Guarantee Program, in 2009, the value of guaranteed amounts was 10.9 million Jordanian dinars so that the outstanding guaranteed portfolio reached 44.3 million Jordanian dinars at the end of the year. Within the Exports Guarantee Program, the value of guaranteed exports shipments in 2009 was about 45.9 million Jordanian dinars. The value of the existing shipments at the end of the year was about 8 million Jordanian dinars.

In order to develop and promote the housing finance market and meet the housing needs of low-income segments of society, the Jordan Mortgage Refinance Company gives loans to re-finance housing loans given by banks to citizens for the purpose of residency ownership. During 2008, the company signed 17 loan agreements with nine financial institutions.

The Capital Market: The main feature of the capital market is separation between the market's monitoring and legislative roles. The Securities Commission undertakes the monitoring and legislative role while the Amman Stock Exchange and the Securities Depository Centre undertake the executive role. These institutions operate as follows:

The Jordan Securities Commission: The Commission aims at protecting investments in stocks , development and monitoring the capital market. The Commission oversees the issuance of stocks while organizing and monitoring the activities of those institutions that fall within its oversight mandate, the Stock Exchange, the Securities Depository Centre and certified financial professions.

Amman Stock Exchange: On 11 March 1999, Amman Stock Exchange assumed operations as a non-profit administrative and financial institution and is licensed to operate as a for trading securities in the Kingdom.

Securities Depository Center: The Securities Depository Center was established as a public entity in accordance with the Securities Law No. 23 of 1997 to be the only entity in the Kingdom authorized by the Securities Law No. 76 of 2002 to register, save, transfer ownership, deposit, as well as conduct clearance and settlement of stocks.

The securities sector has undergone major developments in the past eleven years. Such developments have increasingly contributed to serving various sectors and activities of the national economy and enhancing Jordan's economic development. The market value of the companies listed in Amman Stock Exchange rose from 4.1 billion Jordan dinars in 1999 to 22.57 billion Jordanian dinars at the end of 2009, an increase of about five- times. During the same period, the volume of trade rose from 389.4 million Jordanian dinars to 9,67 billion Jordanian dinars, an increase of more than twenty three times. The daily average for trading was 38.8 million Jordanian dinars in 2009 compared with 1.6 million Jordanian dinars, a growth rate of more than 24 times. In 2009, the average turnover rate was 91.3% compared with 19.1% in 1999. The investment rate of non-Jordanians increased from 43.1% in 1999 to 48.9% in 2009. The market value as a ration of GDP reached 150% in 2009 in comparison to 72.3% in 1999. The number of companies listed in Amman Stock Exchange rose to 272 in 2009 compared with 151. The companies registered an increase by

over four times to reach 6.7 billion Jordanian dinar at the end of 2009 compared with 1.5 billion Jordanian dinars. The number of financial services companies increased to 93 companies in 2009 from 29 companies in 1999. Moreover, IPOs saw an increase from 128.6 million Jordanian dinars in 1999 to reach 4798 million Jordanian dinars in 2009, an increase of more than 37 folds.

Fourth: Insurance

The Insurance Commission seeks to organize the insurance sector and supervise it with a view to ensuring the climate conducive to promote it and enhance the insurance industry's role in the national economy. The Insurance Authority also aims to protect the rights of the insured and strike a balance between the parties of the insurance relationship.

The Insurance Commission supervises the insurance companies operating in the Kingdom whose number reached twenty eight at the end of 2009, all of which are Jordanian public shareholding companies, except one foreign company specialized in life insurance. Eleven Jordanian companies undertake general insurance only, while the remaining companies practice general insurance in addition to life insurance. The latest available data on insurance companies show that their capital reached 287.3 million Jordanian dinars at the end of 2009.

In addition, the Insurance Commission supervises the providers of supporting insurance services. The number of insurance services providers' licenses and renewed licenses in 2009 was 695 licenses, an increase of 11.7% compared with 2008 when 505 insurance agents, 82 insurance brokers, 9 re-insurance brokers, 46 loss settlers, 16 insurance consultants, 13 actuaries and 13 companies for the management of medical insurance expenses and services were licensed. Moreover, 11 banks were awarded the license to practice insurance operations.

The following set of accomplishments were realized during 2007-2009:

First: Monetary Policy

- 1. Maintenance of monetary stability represented by the exchange rate stability, general prices level stability and interest rates stability in the banking sector.
- 2. Strengthening of the Central Bank's independence through the signing of a memorandum of understanding between the Central Bank and the Ministry of Finance which stipulated the securitization of the overdrawn public budget account balance at the Central Bank.
- 3. Application of the interest rate corridorregime.

Second: Banking Sector

- Enhancing the efficiency and effectiveness of banks in practicing banking operations, as the Central Bank undertook a number of measures which developed the performance of the banking sector and organized its work. Following are the main regulations and measures:
 - o Issuance of amended regulations concerning the management and marketing of investment portfolios and funds in foreign currencies for customers' benefits.
 - Issuance of amended regulations concerning the control systems and internal monitoring with a view to activating the banks' internal monitoring.
 - o Issuance of amended regulations concerning the domestic proliferation of licensed banks with a view to organizing this process and ensuring the provision

- of a sound financial and administrative status at the banks which wish to establish branches inside Jordan.
- o Issuance of amended regulations concerning legal liquidity. The inter-bank weighted average of deposits (with a maturity of one year or less) was raised to 100% against previous weights which ranged between 50% and 75%.
- Issuance of regulations concerning Basel II and whereby the first pillar of Basel Accord II was completed.
- Issuance of the Institutional Governance Manual (Institutional Governance) for banks in Jordan whereby banks are obliged to prepare the Institutional Governance Manual to contain the best international practices in this field.
- Issuance of the regulations regarding capital efficiency according to the Basel II Standards.
- o Issuance of regulations concerning Islamic banks' legal liquidity.
- o Issuance of regulations concerning combating money laundering and financing terrorist operations.
- Issuance of amended regulations concerning the classification of credit facilities and calculation of the backslide allowance and banking risks reserve.
- o Issuance of regulations regarding stress testing according to Basle II Standard.
- Renewal by the Government of the full assurance of deposits in Jordanian dinars and foreign currencies between banks in full and to the end of 2010, with a view to enhancing confidence in the banking sector in light of the consequences of the global financial crisis.
- Provision of the guarantees needed to improve the available credit environment for economic projects, national exports and the small and medium enterprises by the Jordan Loan Guarantee Corporation. Since the corporation was set up in 1994, guarantee was given to nearly9405 loans amounting to 143 million Jordanian dinars in addition to guaranteeing export shipments in the value of 260 million Jordanian dinars within the exports credit assurance program at the Jordanian Company for Loans Assurance.

Third: Capita Market

1. Amman Stock Exchange continued to be affected by the global financial crisis, especially by the decrease in the level of liquidity directed towards investment tin the market. This is attributed to several reasons; including the shrinking of shareholders' wealth as a result of the fall in the market value of the stocks owned by them as well as the decrease in the extension of banking loans for the purpose of investment in stocks and the demand to consolidate past loans' assurances. Investment in stocks receded as a result of developments in the regional and international stock exchanges markets and given the lack of evidence indicating the end of the crisis and a success in addressing it at the international level. This had also lead to a decrease in performance indicators at the Amman Stock Exchange following the start of the September 2008 crisis. The market value of listed companies at the Amman Stock Exchange fell from 37.5 billion Jordanian dinars at the end of August 2008 to 25.4 billion Jordanian dollars at the end of December 2008, a 32% decrease. The anticipated record of market value of free shares saw a decrease by 37% in the same period. It is expected that Amman Stock Exchange indicators will be affected by the developments of international and regional stock markets in the future, which may lead, in the event of the continuation of such a crisis, to lower investment flows into the Stock Exchange from

abroad, increased trends towards cash preference and low-risk liquid investments, a decrease in the volume of IPOs and a decline in the profits of brokering companies in the market as a result of the decline int eh volume of dealinds and the decrease in the investment portfolios of these companies. Moreover, the profits of public shareholding companies may also decrease, and especially real estate companies, financial services companies and companies which invest in the stocks. It is additionally possible that the number of those employed in connection with these occupations will decrease.

- 2. Launching by the Amman Stock Exchange of the new copy of the electronic circulation system known as NSC V900.
- 3. Adoption of regulations relating to trading through the internet, in preparation for using the trading system through the internet soon.
- 4. Signing an agreement of joint cooperation between Amman Stock Exchange and London Stock Exchange aimed at strengthening the ties between the two institutions, as well as awarding full membership to the Amman Stock Exchange in the World Federation of Exchanges (WFE) in 2007.
- 5. Launching the Dow Jones Amman Stock Exchange Index (Dow Jones ASE-100), in the beginning of 2008. This a wide reference index which measures the performance of theshare of the 100 biggest companies listed in Amman Stock Exchange on the basis of the market value of free shares.
- 6. Setting up the Stock Exchange Simulation Room at a number of Jordanian universities.
- 7. Updating the technical infrastructure of capital market institutions.
- 8. Starting to apply the Manual of the Rules of Governance of Listed Companies, approved by the Securities Commission in 2008, as of 1 January 2009.
- 9. The Securities Depository Center announced the ownership and trading by the representatives of public shareholding companies board members and those who own 1% and more of the public shareholding companies with a view to enhancing the principle of transparency and disclosure in the Jordanian capital market.
- 10. Posting the financial rates and corporate procedures pertaining to public shareholding companies at the Securities Depository Center's website.
- 11. Development of special programs for the prohibition of disposals system and the addition of special protection programs and the delegation of powers to the system's users at the Securities Depository Center.
- 12. Implementation of the backup site and work sustainability site of the Securities Depository Center.
- 13. Opening branches for the Securities Depository Center, the first in Shmaisani (in Amman) in 2007 and the second in Irbid in 2008.
- 14. Issue by the Securities Authority of a number of regulations organizing the market most important of which are the Regulations of the Investors Protection Fund, Regulations on the Bases and Standards for the Preparation of Annual and Provisional Financial Statements for 2007, Regulations on the Investigation on Violations Committed Against the Securities Law for 2008, Regulations on Combating Money Laundering, and Regulations on the Bases of Granting Shareholding Options for the employees of Public Shareholding Companies. The Regulations on Trading Through the Internet for 2009 were also approved.
- 15. Start of the application of a preliminary project for electronic disclosure.

- 16. Launching the project on the development of the capital market technical environment, and hence the start of the implementation of modern electronic systems for trading and oversight of trading and depositing in accordance with the latest international standards.
- 17. Signing a Memorandum of Understanding on the King Abdullah II Chair for Securities Studies at the University of Jordan with a view to working out the mechanisms of the establishment of the King Abdullah II Chair for Securities Studies at the Jordanian University.
- 18. Signing a Memorandum of Understanding between the Securities Commission and the Stock Market and Exchange Project Unit at the Ministry of Finance in the Republic of Yemen, whereby the Commission will provide the Yemeni side with the expertise needed to set up stock exchange entities in Yemen.

Fourth: Insurance

- 1. Taking the necessary measures to enhance the institutional governance for insurance companies and issue regulations for combating money laundering in insurance activities.
- 2. Issue of a set of regulations to regulate the insurance sector most important of which are the system to amend the minimum capital of the insurance company and re-insurance company as well as regulations on licensing foreign insurance companies and licensing re-insurance companies in addition to exempted re-insurance companies and banking insurance.
- 3. Provision of alternative means to settle disputes by cordial settlement between the insured and the insurance company through mediation or through the insurance disputes settlement committee.
- 4. Drafting the Law of Insurance and submitting it to the Council of Ministers to take the constitutional procedures to enact it in 2010 to become the comprehensive legislative reference on insurance in Jordan, which addresses the principles and provisions of the insurance contract and the regulation and development of insurance work in the Kingdom. The law will enhance the Jordanian economy's competitiveness and realize the Royal vision to consolidate Jordan as a regional insurance center through participation in the provision of a suitable legislative environment which seeks to attract major world insurance and reinsurance companies as well as attract insurance brokerage companies, re-insurance brokers and insurance management companies, which play a prominent role in the service of insurance and re-insurance companies.
- 5. Completion of establishing the technical and legal bases for a national project for insurance against earthquake risks to insure existing residential buildings and new buildings as well as drafting a preliminary project for compulsory insurance against earthquakes for commercial and industrial enterprises and government buildings. The legislations pertaining to the project are expected to be enacted in 2010.
- 6. The continued implementation of the occupational qualification and training programs for employees of the Insurance Commission and the insurance sector.

Challenges

Despite the above mentioned accomplishments, the monetary and financial services sector continues to encounter the following challenges:

- Addressing the effects of the global financial crisis.
- Maintenance of the monetary and banking stability in the Kingdom.

- Addressing financial and banking globalization.
- Absence of local credit classification institutions and obtaining international accreditation.
- The absence of Islamic financial tools to stimulate and direct investment
- The shortage of credit information about borrowers in the Jordanian market.
- Lack of internal and external balance reflected in the Public Budget deficit and Current Account deficit.
- Weakness of the secondary bonds market and not issuing government bonds in a regular and periodic manner.
- The inability of the legal environment to promote the ability of re-insurance companies to provide their services and export them to neighboring companies in addition to their treatment, in taxation terms, as non-resident companies as companies that provide services across borders.
- Constraints and obstacles to the ownership by non-Jordanians of shares in public share holding companies addressed in the Statute of the Regulation of investments by Non-Jordanians

Long term objectives

- 1. Maintain monetary and banking stability in Jordan.
- 2. Develop financial services (banking and insurance services, loans assurance mechanism and capital market) so as to contribute to the realization of economic and social development.
- 3. Strengthen the financial market through raising the level of the technical and legislative infrastructure in the national capital market.

Short term objectives

- 1. link the Jordanian dinar's exchange rate to the US dollar.
- 2. Ensure the stability of the Jordanian dinar's exchange rate.
- 3. Ensure the stability of the general price level.
- 4. Manage Jordan's reserves of foreign currencies.
- 5. Develop banking units centers in accordance with the best international practices and standards.
- 6. Increase the assurance volume of small and medium projects and assurance of Jordanian exports.
- 7. Provide full protection to the majority of bank depositors.
- 8. Build up a suitable level of reserves at the Deposit Insurance Corporation so as to protect bank depositors.
- 9. Develop and organize the insurance sector.
- 10. Expand the insurance coverage for various categories of society and preserve the balance between the parties to the insurance relationship.
- 11. Increase the methods of information dissemination at Amman Stock Exchange to ensure access by the largest possible number of investors.
- 12. Develop the requirements of financial affordability of licensed financial services companies so as to strengthen their status and protect investors and dealers with such companies and lessen their exposure to any financial risks.

- 13. Enhance the rule of law and the oversight role of the Securities Commission in the Amman Stock Exchange.
- 14. To apply the international standards issued by international organizations in the capital market field.
- 15. To apply the governance rules of corporate companies listed in the Amman Stock Exchange and monitor companies' commitment to them.

Employment Support and Vocational and Technical Training

Jordan witnessed in the past few years economic and social developments leading to the increase of the volume of immigrant labor in some sectors, especially construction and agricultural sectors, also became engaged in these sector. To address such challenges and deciliters, the Government, in cooperation with the armed forces and private sector, has adopted a set of programs and projects aimed at providing the Jordanian labor market with trained and qualified Jordanian labor, reducing the immigrant labor rate, unemployment reduction and raising the proportion of the economically active population.

- Vocational and Technical Employment and Training Support theme aims at organizing the Jordanian labor market, raising the proportion of the economically active population, reducing unemployment, increasing employment through raising women' economic participation, reducing the rate of voluntary unemployment, raising job opportunities of persons with special needs, stimulating investments that generate job opportunities to absorb the growing number of Jordanians who will join the Jordanian labor market, coordinating pension systems with the demographic opportunity status, making use of this phenomenon in the long term and enhancing partnership with the private sector and civil society organizations.

Following is a summary of the expected financial status of this theme for the years 2011-2013:

Summary of the Expected Financial Status for 2011-2013

(1000 JD)

Sector	Total Cost	Expected Expenditure							
		2011	2012	2013	2011-2013				
Employment Support and Vocational and Technical Training	308,961	43,689	37,905	39,435	121,029				
Total	308,961	43,689	37,905	39,435	121,029				

The Jordanian market is considered to be a source of educated workforce with high competence while is also being an importer of low education level and high occupational competence in some sectors. One of its major characteristics is low economic participation rates, whereby the revised economic participation rate was 40.1% in 2009.

The number of the Jordanian workforce in 2009 is estimated to be 1,400,805 male and female workers of the total population. Public sector employees constitute 38.9% of the total number of employees compared with 60.7% in the private sector. The overwhelming majority of employees are males accounting for 83.9%. The number of immigrant workers registered with the Ministry of Labor was 335,707 in 2009 forming 23.9% of the total workforce in Jordan. Immigrant workers are mainly employed in the sectors of agricultural services, social and personal services, manufacturing industry, commerce, restaurants and hotels, building and construction, whereby the rates respectively were about 26.7%, 25.6%, 19.9%, 13.5% and 11.4%.

The unemployment phenomena is one of the main problems facing the Jordanian economy. Unemployment rates are still high due to several factors most predominantly the demographic transformations, which have led to the growing numbers of new entrants into the labor market, weak coordination between the outputs of various educational levels and the requirements of the labor market, competition created by the immigrant workforce with the Jordanian workforce in some occupations and fields of specializations resulting from the big gap in wages between both

sides. Moreover, variation still exists in unemployment rates between different governorates, whereby the highest unemployment rate was in Ma'an Governorate (17.7%) and the lowest was in Amman Governorate and Aqaba Governorate 11.2% and 12.4% respectively.

Women account for 17.8% of the Jordanian workforce compared with 40% in developed countries. The low women participation is attributed to several reasons including their average practical working life, their high enrolment rates in education and early withdrawal from the labor market. 2009 gender indicators demonstrate that the gender gap of women's economic participation was 49.9%, which means that women's economic participation is still below the desired level Females activity is concentrated in education (38.1%), health and social work (14.8%), manufacturing industry (7.9%) sectors according to 2009 statistics.

Jordanian Labor Market (2006-2009)

T 1		Va	llue	
Indicator	2006	2007	2008	2009
Unemployment rate	14%	13.1%	12.7%	12.9%

Employment rate of Vocational Training Corporation n graduates	70%	71.3%	74.6%	74.6%

Within the theme of - Vocational and Technical Employment and Training Support, numerous achievements were realized during the past three years most important of which were the following:

First: Raising the level of coordination between human resources stakeholders:

1. Preparation of the Higher Council for Human Resources Development bylaws.

- 2. Structuring the Technical and Vocational Education and Training Council (TVET) to become the Employment, Technical and Vocational Education and Training Council (ETVET).
- 3. Establishment of the Economic and Social Council.
- 4. Issuing a unified national strategy for vocational and technical education and training in 2008.
- 5. Issuing the new Law of Social Security No. 7 of 2010.
- 6. Expansion of the social security umbrella to include enterprises employing one or more workers. The coverage of enterprises up to 31 March 2010 was as follows: 1,235 enterprises in Aqaba, 5,243 enterprises in Irbid Governorate and 809 enterprises in Ma'an Governorate.

Secondly: Meeting the labor market's needs for qualified local vocational workforce through the following:

- 1. The National Company for Employment and Training was established in cooperation with the Jordanian Armed Forces. The company's long-term strategic objectives are to change the social culture by emphasizing the importance of being equipped with vocations given the effect on ensuring a socially and economically safe future, consolidating social safety and stability through providing professional vocational and technical job opportunities that provide decent economic and social returns, growth of the middle class as well as providers' the national economy with vocational cadres through the recruitment of youth who will work in all technical and vocational sectors. The company's major accomplishments in 2007-2009 include the employment of four groups of trainees (10,286 trainees). Two groups of 5,275 trainees graduated and the remaining trainees are being trained at public sector institutions and are expected to graduate this year and early next year. The company secured permanent jobs for 2,458 graduates composing 46% of those trainees. The remaining graduates are self-employed in small projects or individual investments. The total employment rate reached 34.2% of the company's total strategy involving 30,000 trainees.
- 2. Improve the operational efficiency of the Training and Employment Fund and finance training programs linked to the private sector (drafting new bylaw for the Fund and perform the procedures to have it approved by the ETVET Council).
- 3. Responding to the demand of the Jordanian labor market, new and specific specializations will be available for vocational education.
- 4. Increasing the numbers of employed Company trainees through the National Training and Employment Project from 1,961 employees in 2007 to 2,991 employees in 2008 and 3,559 employees in 2009.
- 5. Increasing the employment rate of the Vocational Training Corporation graduates from 5,803 employed in 2007 to 6,185 employed in 2008.
- 6. The total net numbers of created job opportunities were about (70,000) opportunities in 2007 and (65,000) opportunities in 2008 as well as about (69,000) job opportunities in 2009.

Challenges

Despite the achievements in the past few years, the field of employment and training still encounters some challenges characterized in the following:

- Considerable inconsistency in unemployment rates between governorates in the Kingdom.
- Shortage of data, information and studies on the Jordanian labor market and Jordanian workforce abroad.
- Low percentage of participation in vocational internship programs due to the prevailing societal culture.
- Weak coordination between the entities involved in the field of technical and vocational education and training as well as the multiplicity of such entities and different levels of training quality and types in them.
- Low Jordanian female participation in the workforce compared with developing and developed countries.
- The educational level of more than half of the unemployed in Jordan (56.9%) was below high school education in 2009.
- Resistance of employers to the employ Jordanians because of the common belief that the Jordanian worker is less efficient and less productive than the foreign worker.
- Weak participation of the private sector and civil society institutions in 'training and employment of Jordanians..
- Absence of a bridging system from the basic levels of vocational training (with limited skills, skilled, vocational) to technical and specialized levels (non-academic).

Long term objectives

- 1. Participate in raising the economically active population rate
- 2. Participate in the reduction of the unemployment rate and in increasing employment.

Short term objectives

- 1. Participate in raising women's economic involvement.
- 2. Participate in reducing the unemployment rate through training and employing Jordanians.
- 3. Increase job opportunities for persons with special needs.
- 4. Raise the vocational training system's efficiency and effectiveness to meet the labor market's needs and international standards through coordination between supply and demand in the Jordanian labor market.
- 5. Stimulate the investments that generate suitable job opportunities to absorb the growing number of Jordanians joining the Jordanian labor market.
- 6. Increase the willingness Jordanian to take up vocational and technical work.

Policies

- 1. Participation in the development of the labor market requirements for qualified vocational local workforce for the sake of gradual replacement of the foreign workforce by the Jordanian workforce.
- 2. Encourage women's entry into the labor market.
- 3. Activate regulatory policies of the labor market and expand inspection operations.
- 4. Enhance partnerships with the private sector and civil society organizations.
- 5. Adapt retirement policies to window demographic opportunity and using this phenomenon in the long term
- 6. Raising the level of coordination between the entities concerned with human resources development.

Social welfare

Welfare is accomplished through the provision of decent life, economically and socially for citizens, and for the enhancement of society's safety, cohesion and consolidation of its stability. This is represented by response to all essential human need, especially in connection with marginalized groups and the poor. Realization of social welfare is a common responsibility and a demand by all society's categories and factions so they all should work and coordinate toward achieving it.

The Social Welfare pillar consists of three main sectors: health care, poverty mitigation and social welfare, and local development. It is aimed at raising the level of health care services, realization of the health care sector's sustainable funding through the stimulation and development of human resources employed in the health care sector, support of primary health care services, fairness in access to health care services as well as the adoption of the comprehensive quality concept in the provision of health services and expansion of the health insurance coverage.

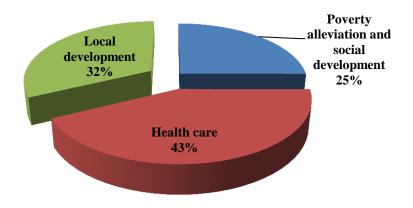

As regards poverty mitigation, it is necessary to provide a comprehensive and effective social security system for the poor and enabling them economically, create sustainable local economies, and provide social welfare services matching the best international practices. This is carried out through the implementation of programs aimed at improving the mechanisms, of targeting for beneficiaries from poverty alleviation programs, social welfare, empowering the poor and upgrading the level of standard of living, raising the capacities of non-governmental organizations and the private sector with a view to providing social protection and welfare services to targeted categories as well as improve housing quality and infrastructure services for poor areas.

The Social Welfare pillar seeks to consolidate the local development concept, achieve a high degree of balance in the distribution of development gains between regions in the Kingdom, attain of a higher decentralization level in development work, increase citizens' involvement in community development, incentivize the private sector to set up investment projects, increase available investment opportunities to support small and medium projects for individuals and institutions and promote of good governance. Following is a summary of the pillar's financial status for the years 2011-2013:

Summary of the Financial Status for 2011-2013

(1,000 JD)

Sector	Total Cost		Expected Expenditure				
	Cost	2011	2012	2013	2011-213

Total	1,795,670	412,317	272,113	357,872	1,042,302		

Social Welfare pillar Expected Expenditures' Percentage

First: Health Care Sector

The health sector witnessed significant development which positively affected the health status of citizens, and the general health indicators reflect the quality and efficiency of health services. Jordan has advanced ranking in a number of indicators: increased life expectancy at birth for males to 71.6 years and 74. 4 years for females, reduced rate of maternal mortality to 19.2 per hundred thousand live births, the population growth rate dropped to 2.2%, and the percentage of people covered by the Measles vaccine reached 100%, moreover, Jordan expanded the umbrella of health insurance to benefit new categories including children under the age of six, citizens in remote areas, disadvantaged factions, and beneficiaries of the social safety net program.

The increasing demand for health services as a result of population growth and the high prevalence of diseases such as heart failure, cancer, diabetes, in addition to the high proportion of the population among the elderly and children, requires concerted efforts and strengthened cooperation and coordination among stakeholders at the national level for the advancement of the health sector in a comprehensive manner.

The Ministry of Health is the government entity responsible for all matters relating to health in the Kingdom, where services are provided (preventive and curative) through a wide network of health centers and hospitals, in addition to the supervisory role assigned to it. The Royal Medical Services, university hospitals, the private sector as well as international organizations and charity sector also provide specialized treatment services, whereby The Higher Health Council is responsible for policies related to the health sector in addition to coordination among all actors involved.

First: Primary Health Care

Primary health care services are based on the concept of universal health care, which focuses on promoting healthy lifestyles and avoiding risk factors, as there has been a high incidence of non-communicable diseases, particularly heart disease, cancer and diabetes.

1. Primary health care services are provided through health care centers affiliated to the Ministry of Health: (70) medical centers, (378) primary health centers and (236) sub-health centers (in 2009).

- 2. Royal Medical Services are involved in the provision of primary health care services through field clinics and health centers, where the overall pilot has recently been established (5 comprehensive health centers) in various regions of the Kingdom.
- 3. Family planning services are provided through the Jordanian Association for Family Planning and Protection (16 clinics distributed in various regions of the Kingdom), The United Nations Relief and Works Agency (UNRWA) provides primary health care services for Palestinian refugees living in Jordan (24 medical clinics), in addition to the private sector contribution in this area through hundreds of centers and clinics.

Second: Secondary and Tertiary Health Care

All health sectors contribute to the delivery of secondary and tertiary health care, with a variation in the amount and type of services. The number of hospitals providing such services amounted to (104) hospitals in 2009, with (11 626) beds, in coordination between the Ministry of Health, Royal Medical Services, the University of Jordan, the King Abdullah University Hospital and the private sector.

Hospitals and beds distribution according to sector in 2009

Sector	Number of hospitals	Number of beds	Rate of beds
Ministry of Health	30	4358	38.4%
Royal Medical Services	12	2400	18.8%
University of Jordan	1	519	4.6%
King Abdulla University Hospital	1	494	4.3%
Private sector	60	3855	33.9%
Total	104	11626	100%

Source: Ministry of Health, Annual Statistical Abstract 2009

The health care sector has achieved significant accomplishments over the years (2007-2009), including;

- 1. Establishment of Prince Hussein bin Abdullah II Hospital, Queen Rania Al-Abdullah Hospital for children.
- 2. Establishment of (28) centers for primary and comprehensive health care, and the expansion of (9) health centers affiliated to the Ministry of Health.
- 3. Increase in the proportion of health insurance coverage, where the percentage of beneficiaries increased from (78.8%) in 2007 to (85.9%) in 2009.
- 4. Increase in the number of hospitals that provide emergency services under the supervision of medical specialists to (15) hospitals
- 5. Increase in the number of health projects involving public and private sectors, under the auspices of the Higher Health Council (from 5 in 2007 to 7 in 2009).
- 6. Development of the National Observatory of Health Human Resources in Jordan in 2009.
- 7. Issuance of the report on National Health Accounts for the year 2007.
- 8. Preparation of the Kingdom's Health Map in 2008.
- 9. The Formation of the Transparent Pharmaceutical Council which includes representatives from public and private sectors, as well as civil society institutions involved in the medical

sector in Jordan to take decisions based on evidence and research- an initiative which is the first of its kind in the Arab World and the Middle East.

- 10. Launch of the population opportunity policy in Jordan in 2009.
- 11. Rising coverage rate of vaccinations to include 98% of children during the first year of age.

Health Indicators Development for 2005-2009

Indicator			Years		
indicator	2005	2006	2007	2008	2009
Crude birth rate per 1000 population	29	29.1	29.1	28	29.1
Population growth rate	2.5	2.3	2.2	2.2	2.2
Total fertility rate	3.7	3.7	3.6	3.6	3.8
Life expectancy at birth (males)	70.6	70.6	71.6	71.6	71.6
Life expectancy at birth (females)	72.4	72.4	74.4	74.4	74.4
Infant mortality rate per one thousand live births	22	22	19	19	23
Maternal mortality rate per one hundred thousand live births	31	31	30	19.2	19.2
Physicians ratio per ten thousand people	23.5	24.5	26.7	24.9	24.5
Dentists ratio per ten thousand people	7.6	8.2	8.5	8.7	7.3
Ratio of nurses (certified nurse, associate nurse, midwife, assistant nurse) per ten thousand people	29.4	33	33.6	33.2	40.3
Pharmacists ratio per ten thousand individual	12.9	12	14.1	13.2	14.1
Bed ratio per ten thousand individual	17	19	18	18	18

Challenges

Despite the realized achievements, there are still a number of issues and challenges which should be addressed, notably:

- Difficulty in attracting new competencies and the difficulty in retaining technically qualified employees.
- Increasing demand on health services.
- The paradigm shift of diseases.
- Absence of a comprehensive health insurance system.
- Weak health information systems and limited use in decision-making and policy formulation.
- The rising cost of health services and expenditure in light of failure of fiscal policy in cost recovery.

• Duplication and expansion of health services.

Long-term Objectives:

- 1. Improve the quality and safety of health care services.
- 2. Achieve sustainable financing of health-care sector while reducing the burden on public finances.
- 3. Reduce the rates of non-contagious diseases.

Short-term Objectives:

- 1. Raise the utilization rates of reproductive health services / family planning services.
- 2. Increase the rate of health institutions with certified accreditation.
- 3. Control and guide health spending.
- 4. Reduce the prevalence of risk factors of non-communicable diseases.
- 5. Raise the efficiency of human resources working in the health sector.

Indicator	Baseline Value 2006	2007	2008	2009	2010	2011	2012	2013	Responsible Entity	Supporting Entities	
Raise the utilization rates of reproductive health services /family planning											
Contraceptive prevalence rate (all methods)	1	57%	57%	59.3%	60%	61%	62%	63%	Ministry of Health	The Higher Population Council

Rate of smokers (18- year old and above)	29%	29%	29%	29%	27%	26%	25%	25%	Ministry of Health	The Royal Medical Services

Policies:

- 1. Expansion of health insurance coverage.
- 2. Promote equitable access to health service.
- 3. Strengthen partnership between health sectors.
- 4. Stimulate the development of human resources employees in the health sector.
- 5. Adoption of the comprehensive quality concept in the provision of health services.
- 6. Effective and appropriate dissemination of information and services on reproductive health / family planning.
- 7. Improve ambulance services and emergency.
- 8. Support of primary health care services.
- 9. Support of health information systems and promote their use.
- 10. Promote of rational use of medicines.
- 11. Promote the practice of healthy life styles.
- 12. Promote the concept of health care in local development.

Second: Poverty reduction and Social Development

As in other developing countries, Jordan suffers from the problem of poverty, in both its social and economic dimensions. The poverty problem came into light as an issue requiring solutions in the mid-1980s and in similar vein to other countries, Jordan initiated a number of plans, programs and studies to understand poverty and its forms in order to implement the necessary measures to address this phenomenon and lessen its effects.

The study on poverty, based on data from the household income and expenditure survey conducted in 2008 and published in July 2010, revealed a decrease of the poverty rate to 13.3%, compared to 13% in 2006. Results also indicated an increase in the number of poor persons; (728) thousand in 2006 compared to (781) thousand in 2008. Moreover, the general poverty line per person per year reached (680) JDs, while the food poverty line per person per year reached (292) JDs in 2008.

Based on the aforementioned data, areas with a poverty rate higher than (25%) were identified as poverty pockets and numbered (32) areas.

The National Aid Fund is responsible for providing the necessary support and training for poor families. Accordingly, the Government supported and activated the Fund, increasing its financial resources and developing its mechanisms in order to ensure access to a broader segment of the poor and with a higher level of financial assistance. The National Aid Fund is considered the main social safety net program for the poor in Jordan. The Fund has seen significant increases in its budget in the past years, doubling the number of beneficiaries and raising the ceiling on aid, with a total annual budget of about (88) million JDs, and its services benefiting approximately (80) thousand poor households.

Moreover, the Government had spearheaded many other initiatives to combat poverty. For example, The government has sought to activate the law of the Zakat Fund as a means of contributing to the fight against poverty. The Government additionally launched several programs and projects to target the poor and poverty areas through governmental and non-governmental institutions. These programs and projects were not limited to providing financial aid as they included activities to encourage productive initiatives and the provision of social welfare for the poor and marginalized such as orphans, the elderly and disabled individuals. A number of royal initiatives were also implemented to provide adequate housing for the poor and destitute.

The Government's initiatives in addressing the issue of poverty reduction resulted in a number of achievements in the period 2007-2009. The major achievements include:

- 1. Formation of a steering committee to develop an integrated government plan to identify the needs of poor areas in terms of projects and development priorities.
- 2. Implement household income and expenditure survey (2008), which considered as the source of defining the poverty level in Jordan.
- 3. Development of principles and criteria for identifying poverty pockets, with (32) areas identified as pockets of poverty with a poverty rate exceeding 25%.
- 4. The number of households benefiting from the Productive Families Program amounted to (619) households.
- 5. Establishment of (106) Trust Funds with charity organizations.

- 6. Establishment of (14) Care Homes and a Social Services office.
- 7. The Rehabilitation of (165) charity organizations for the implementation of development projects.
- 8. The number of beneficiaries of the recurrent program of financial aid and supplementary income has been increased to reach (75788) in 2009.
- 9. The number of beneficiaries of the Aid Program for persons with disability and special needs to has been increased to reach (7304) in 2009.
- 10. The number of beneficiaries of the Physical Rehabilitation Program has been increased to reach (520).
- 11. Development of the skills of (2026) workers and specialists in the field of social care for the end of the year (2009).
- 12. The Zakat Fund contributed to the reduction of poverty and unemployment through the implementation of many programs and projects, particularly in the fields of monetary aid/cash transfers, the rehabilitation of productive households, and the distribution of food rations/parcels.
- 13. The provision of social safety nets in order to protect citizens from the consequences of the liberalization of fuel prices and the sharp increase in general prices. Measures included the increase in employees' salaries and compensations for fuel consumption and others. Such allocations increased from (107) million JDs in 2007 to (391) million JDs in 2008.
- 14. Adoption of the National Strategy for Persons with Disabilities (2007 2015), and Law No. (31) pertaining to the rights of persons with disabilities and special needs for the year 2007 and the establishment of the Supreme Council for Persons with Disabilities.

Challenges

Despite the improvement demonstrated by the indicators in the 2006 study on poverty, the significant rise in the general cost of living over the past two years, in addition to the global financial crisis from which most countries, including Jordan, are suffering, may in turn lead to a negative impact on national efforts to address and mitigate the problem of poverty. This is in addition to a number of other challenges such as:

- Poverty is not being addressed in a multi-dimensional and comprehensive manner.
- The weak link between wage levels and inflation rates.
- The weakness of the concept of social responsibility in the contribution of the private sector and non-governmental organizations in activities relating to combating poverty.
- The increase in housing costs beyond the capabilities of poor households.
- The decrease in the level of social welfare services and the weak institutional capacity of those in charge.
- The absence of a link between cash assistance and the general improvement of standards of living of the poor.

- Poor coordination and cooperation between public and private sectors, leading to the marginalization of issues related to persons with disabilities and special needs.
- Weak cooperation and proper coordination between the sectors involved in the promotion of social solidarity and the fight against poverty. This leads to duplication in the work of these institutions and a waste of resources and capabilities.

Long term objectives

- 1. Providing a comprehensive and effective social security system for the poor.
- 2. Reducing the poverty rate in Jordan.
- 3. Providing social welfare services in line with best international practices.

Short term objectives

- 1. Improving the targeting mechanisms for beneficiaries of programs and projects to combat poverty and to achieve social welfare.
- 2. Improving the standard of social welfare provision and strengthening the role of civil society in providing such services.
- 3. Developing local economies in impoverished communities and poverty pockets and encouraging public participation in those programs.
- 4. Activating the role of public and private sectors for the empowerment of persons with disabilities and provide them with appropriate services.
- 5. Providing and maintaining quality services to persons with disabilities.
- 6. Preventing duality and repetition in similar programs, projects and activities in the field of poverty alleviation.

Third: Local Development Sector

The economic and social development process at national and local levels has acquired special importance, given the political will that motivates the advancement of local communities and improvement of living standards. Local development effectively contributes to the creation of effective local economies capable of realizing optimal and sustainable utilization of available resources. It also contributes to the reform of the economic and social policies system, which influences and is influenced by local development activity, in order to achieve integration and coordination of such policies and distribution of roles between concerned development institutions. In continuation to the many accomplishments achieved by national plans in the field of reducing development disparities between regions of the Kingdom, a need has emerged to pay maximum attention to development in its special dimension, considering it as a development approach, which when adopted would lead to positive results in raising citizens' living standards, development of local administration and government systems. The Government has taken the initiative to unify the visions of entities concerned with the development process at official and popular levels in order to formulate a unified concept of local development as "participatory planning effort directed to mobilize all efforts in society, and motivating its potential in order to create a better standard of living for the citizens in their localities.

With the aim of expanding the base of participation in the decision-making process related to development and its implementation, and in order to promote partnership principles, accountability and equal opportunities, Jordan's vision of economic and social development goes hand in hand with its vision of political development. Moreover, participation in decision-making and implementation, especially in governorates, has prompted the Government to consider adopting a local administration model that is inclined towards decentralization and that ensures fast and effective implementation. The decentralization project, which has been launched, will ensure cooperation and coordination between the governorates and the Government. This project falls within the framework of continued efforts to improve citizens' standards of living and provision of best services.

Jordan's population at the end of 2009 was estimated at nearly 5.98 million. The average population growth was 2.2%. It should be noted that Jordan has undergone a number of compulsory migrations because of the conditions in neighboring countries. Two thirds of the population live in the central governorates: Amman, Madaba, Al-Balqa' and Al Zarq, which constitute 16.2% of Jordan's total area, while 28% of the population lives in the northern governorates of Irbid, Jerash, Ajloun and Mafraq, whose area is about one third of the total area, while less than 10% of the population lives in the southern governorates of Al-Karak, Tafileh, Ma'an and Aqaba, which constitute half of the Kingdom's total area. The Jordanian society is characterized by being young. Nearly 38% of its population is less than 15 years old, compared with half of this figure in developed countries. Nearly 58% of the population is in the 15-64 years age group, while 4% is in the 65 years and above age group.

The population growth rate is expected to change. The growth rate of the economically-active population (15-64 years age group) is expected to become higher than that of the dependent age groups (below 15 years and over 64 years). It is anticipated that this unprecedented transition, which has been described as the "population opportunity", will take place in 2030-2032, when this age group reaches 69% of the population. The national fertility rate was 3.8 births per woman in 2009 and is expected to drop to 3.5 in 2012 according to the National Campaign for Reproductive Health for the years 2008-2012. The number of dwellings in Jordan is nearly 1.2 million homes, 940 thousand of which are inhabited. The annual growth rate of housing is around 3.7% per annum. The local development administration's structure in the Kingdom consists of 12 governorates: 51 liwa (districts) and 38 qadha (sub-districts). There are 93 Municipal Councils in addition to the

Greater Amman Municipality. The main categories of municipalities are first category municipalities (11), second category municipalities (47), third category municipalities (28) and fourth category municipalities (7). The municipalities' total budget, excluding Greater Amman Municipality, is about 190 million Jordanian dDinars.

With regard to micro finance, the institutions in this sector take part in strengthening all aspects of local development, focusing on the creation of job opportunities that will lead to improving citizens' standards of living in their communities. The following table presents the main developments that micro financing witnessed in the past few years:

Development of microfinance during 2006-2009

Indicator		Amount	s by Year	
Indicator	2006	2007	2008	2009
Number of active customers / agents (one thousand)	58,788	89,162	120,650	133,987
Portfolio of existing loans	26,213,410	36,763,790	49,482,013	50,154,758
Number of distributed loans	58,874	85,907	104,228	121,297
Value of distributed loans (Dinar)	35,415,789	49,144,792	67,719,481	884,858,66
Ratio of women borrowers	%91.1	90.3%	%91.1	%87
Ratio of borrowers from outside Amman	%52.7	%56.3	%57.9	%61.8

Return on assets	%7.2	%9.4	%5.5	%4.1

Moreover, a number of lending institutions, considered governmental development arms, enhance the roles of municipalities, civil society organizations and individuals in setting up productive development projects. Following are the main features of these institutions' current status:

Indicators of major financing government institutions in the local development sector, 2006-2009

Item/Institution	Agricultural Credit Corporation	Development and Employment Fund	Cities and Villages Development Bank
Capital	34,000	29,140	50,000
Capital reserve	10,400	-	17,500
Loans balances	94,000	37,157	71,000
Loans volume	46,000	52,764	120,5000
Repayment rate	79%	97%	100%
Targeted categories	Farmers	Individuals, civil and intermediary institutions	Municipalities

Throughout the past few years, the Government has promoted the local development concept with all its aspects, through the development of governorates and municipalities and enhancement of local economies. Following are the main accomplishments:

First: Empowering Local Administration Institutions

- 1. Establishment of development units in governorates' centers, equipping them with necessary cadres and technologies, qualifying the organizational framework needed for their work, building their institutional capacity to prepare governorates' economic and social situation analysis, monitoring the implementation of development capital projects, identifying constraints facing their implementation and taking measures needed to address them, following up the work of executive and consultative councils, and monitoring development issues concerning the governorates in these councils. This includes activating the role of strategic and academic studies centers in aspects related to local development in governorates, linked to the development role of the governor, through signing a number of memorandums of understanding with national institutions and international programs such as John Hopkins University, the Jordanian University, Ru'a Center for Studies and Al-Thuraya Center for Consultations, Training and Studies.
- 2. Enabling municipalities in the financial reform domain, development of infrastructure and capacity building, provision of services that meet citizens' needs and priorities on a partnership basis, promoting municipalities' role in leading development planning and contribution to poverty alleviation, in addition to crystallizing economic opportunities to carry out genuine partnership projects with the public and private sectors and the civil sector.

Second: Supporting Microfinance

1. Launching a market and impact assessment study at the national level in order to identify and formulate policies for Microfinance institutions to increase funding and expand in poor areas. An amount of 15 million Euros has been secured to support micro finance institutions, ,through the Spanish Agency for International Cooperation via agreements signed with the National Bank for Financing Small Projects (5 million Euros), and Jordan Micro Credit Company (Tamweelcom-4 million Euros) and the Women's Fund (6 million Euros). Moreover, a 3 million Euro funding has been secured through the French Agency for Development in cooperation with Societe General Bank, which was re-lent in the local currency to Jordan Micro Credit Company (Tamweelcom -2 million Dinars) and the Middle East for Financing Small Projects(one million Dinar).

Third: Development of local economies and enhancing their productivity

Through continued implementation of the Economic and Social Productivity Enhancement Program (launched in 2002), several achievements have been realized within the Program's five main components:

1. Expansion of the Program to include advisory and training services to municipalities and cooperatives.. The Program aims to help and motivate individuals to establish and develop pilot production projects, through providing them with support services. This includes conducting economic feasibility studies, managerial and financial consultations, assistance in developing existing works and obtaining necessary licenses, as well as the providing specialized training opportunities to assist owners of these enterprises all over the Kingdom,

- especially in less fortunate areas. Assistance has been provided to establish and expand nearly 1200 projects, contributing to the provision of 3600 job opportunities.
- 2. Building institutional and technical capacities of more than 130 local entities including charity organizations, cooperatives, clubs and other entities through the Enhancement of Institutional Capacities for Civil Organizations Program (*qudrat*), which aimed at promoting the developmental role played by non-governmental organizations to achieve sustainable development in various areas in the Kingdom. Moreover, 85 productions were set up, costing about 4.28 million Dinars.
- 3. Local development program in the less fortunate areas, which aims at mobilizing and stimulating local potentials to effectively contribute to the improvement of individuals' income as well as living and economic conditions in their areas. The second phase of the program covers 16 poor areas, costing 8 million Dinars, 500 thousand Dinars for each area to set up production projects, and lending portfolios, in addition to meeting basic priority needs in the field of infrastructure services as well as training and raising public awareness activities.
- 4. Implementation of numerous service projects in priority areas including the following projects: Al-Azraq water networks, financing the purchase of equipment for the Jordanian Royal Medical Services, support to the National Plan for Reproductive Health, military training for students, Almansoura Wastewater Treatment Plant, sewage projects in Altufaila Governorate and digging 9 water wells in Wadi Araba within the Small Grants and Direct Intervention Program.
- 5. Infrastructure projects to promote production projects that support investment and creation of job opportunities in targeted areas This included financing the construction of agricultural roads and their accessories (annexes), via methods requiring intensive labor, in various regions of the Kingdom with the value of 3 million Dinars in 2009, and the allocation of 2.4 million Dinars for the development of slaughterhouses in 6 municipalities. Moreover, popular markets in ten municipalities were established with the value of 3 million Dinars.

Challenges

Despite these achievements, the local development sector still encounters a set of challenges, most importantly:

- 1. Economic and social development disparity between various regions of Jordan.
- 2. Imbalance in the population distribution as well as high and variance of the fertility rate in different regions.
- 3. High degree of centralization in designing, implementing and monitoring development decisions and budgeting.
- 4. Municipalities' debt and limited effectiveness of their development role.
- 5. Shortage of qualified cadres at the local level as well as the resources available to them
- 6. Shortage of adequate liquidity to match lending finance products with the requirements of target groups.

Long term objectives

Promotion of good governance in managing local development to contribute to the reduction of development discrepancy between governorates and their municipalities.

Short term objectives

- 1. Improvement in the level of basic services provided to citizens in governorates and municipalities.
- 2. Gradual movement towards the application of decentralization in managing local development at the level of governorates and municipalities.
- 3. Involvement of citizens in the development of their communities.
- 4. Provision of a detailed development database at the level of regions in the Kingdom.
- 5. Encouragement of the private sector and civil society institutions to set up development and production investment projects in local communities.
- 6. Increasing available financing opportunities to support small and medium projects for individuals and institutions, especially in the poorest areas.
- 7. Raising the influence level on decisions related to citizens and development in order to benefit from the population opportunity.

Polices

- 1. Directing municipalities towards enhancing their developmental integration.
- 2. Activating the decentralization approach and enhancing the development role of governors.
- 3. Enhancing the institutional capacities of the regional development directorates.
- 4. Linking the financing of the Cities and Villages Development Bank for municipal projects to the local development plans.
- 5. Promoting social and economic productivity amongst individuals and local committees.
- 6. Encouraging the private sector and civil society organizations to establish investment, developmental and productive projects, in partnership with the municipalities.
- 7. Gaining the support of the local leadership on issues pertaining to the population opportunity and involving this leadership in planning at the local level

Education, Higher Education and Scientific Research

During the past few decades, Jordan has been able to lay the foundation of a comprehensive high quality educational system aimed at the development of a qualified human capital capable to encounter future challenges In addition, economic development in Jordan mainly relies on productive and highly skilled workforce to maintain competitiveness at the local and regional levels. Duly, Jordan attaches great significance to education and scientific research to develop knowledge and innovation to achieve economic development.

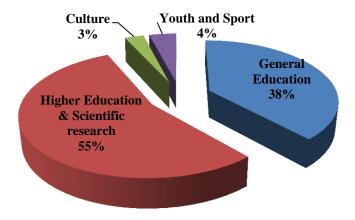

The education, higher education and scientific research pillar consists of four main sectors that are; general education, higher education, culture and youth. it's also aims at providing educational opportunities for all, equity and equality as well as preparing the students and equipping them with the knowledge needed for the knowledge-based economy, matching the educational outcomes with the Jordanian labor market needs, and support of high quality higher education that will enable human cadres and compete at both the Arab and international levels, promotion and support of scientific research, provision of an environment conducive to creativity in cultural and technical fields, and to bringing up and developing self-aware youth, confident in their capacities, loyal to their country and who effectively participate in its development and advancement.

These objectives will be achieved through: provision educational opportunities and suitable educational environment, expansion in constructing public kindergartens, improving the quality of education to meet the requirements of the knowledge economy, improving the education and scientific research environment at public universities, establishment and modernization of museums and cultural centers, publishing cultural and artistic productions, enhancement of the citizenship concept among youth as well as enabling them economically and assisting them to enter the labor market.

Summary of the Financial Status for 2011-2013

(1,000 JD)

Ratios of expenditure to the total expenditure on the education, higher education & scientific research for the years 2011-2013

First: General Education Sector

General education in Jordan is regarded one of the priorities in all national policies as a major pillar to achieve sustainable development, whereby the human capital assumes it responsibility as the main driver for economic development. The philosophy of education in Jordan derives its principles and bases from the Jordanian Constitution, experiences, values and supreme ideals, hopes and needs in the political, economic, social and cultural fields. Stemming from the fact that education today is no longer a controversial issue, Jordan has paid special attention to education in its programs and policies. Contemporary international experiences have proved that the main and only driver for advancement is education and that all countries which have made great strides in progress have done so through education.

Jordan has adopted new education systems, which are in synch with global trends and anchored in building an economy based on knowledge. Following are Jordan's major accomplishments in 2007-2009:

- 1. Providing a safe and sound infrastructure for students through constructing (74) schools with (1607) classrooms, and the expansion of (148) classrooms. (49) Schools are under construction. Preparations are underway to build schools and add classrooms included in the Education Development Plan towards Economy Knowledge-Second Phase after the Ministry of Education completed the engineering design manual to be applied in this phase.
- 2. Improving the quality of education through focusing on practical activities and applications. Accordingly, (74) physics and chemistry laboratories, (123) general science laboratories, (67) vocational training workshops, (67) art halls and (42) school libraries were established. Within the second phase of the development plan, the needs for science laboratories to be implemented have been identified.
- 3. Early childhood development through constructing and equipping (210) kindergartens in 210 schools. Moreover, (50) Kindergarten classroom are being equipped within the education development support project. In addition, the kindergarten classrooms needs that will be implemented within the second phase of the education development project have been identified.
- 4. In the field of e-learning, 134 computer laboratories have been established and about 300 schools were connected through the fiber optics network. Moreover, computer laboratories needs have been identified and will be met within the second phase of the education development project.
- 5. Enhance institutional capacities through providing training to (85183) teachers in computer skills and training (8393) kindergarten teachers and teachers of the first three grades in the programs of working with youngsters (Wisconsin Program) and the National Interactive Curriculum as well as training 6892 administrators in administrator in addition to leaders development courses and qualifying 1181 teachers for the higher diploma and 152 teachers for the Master's degree and 37 teachers for the PhD degree.
- 6. The Ministry of Education has also computerized the management information curricula for Grade 11, general science curricula for Grades 1-12, computer for Grades 1-10 and national and civil education curricula for Grades 6-10.
- 7. Continue to implement the school nutrition program. About one million pupils have benefited from this program.

Jordan has achieved remarkable progress in general education that was reflected in transferring from quantitative education to education based on the knowledge economy. Noting that in 2009, spending on general education has reached 3.7% of

GDP. As a result, there has been positive development in several quantitative indicators of the general education sector.

Quantitative Development in the General Education Sector

Description	2010-2011
Number of employees	116,815
Total number of schools	6,007
Number of public schools	3,466
Number of King Abdullah Schools for Excellence	6
Number of Deaf and mute specialized schools	10
Number of Schools for the Blind	2
Number of Special Centers for Gifted Children	18
Student /teacher rate in /basic education	1-17,77
Student/teacher rate in secondary education	1-12,4
Student/computer rate	1-16
Overall number of students in nursery schools	103,544
Number of students in public nursery schools	17,848
Overall number of students in basic schools	1,350,346
Overall number of students in high schools (academic and vocational)	204,032
Number of students in vocational high schools	25,639
Qualified teachers ratio	56%
ICDL teachers	50,790
Intel teachers	23,156
World Links teachers	2,575
Ratio of dropouts	0.31%
Illiteracy Ratio	7.7%
Ratio of women participating in leading jobs	12,33%

Challenges

Despite the realized accomplishments, the general education sector still encounters a set of challenges which can be summed up as follows:

- Increasing pressure on the educational infrastructure.
- Low enrollment in nursery schools because of limited number of facilities, high costs and lack of awareness regarding the importance of early learning.
- Insufficient male specialization in some disciplines such as mathematics, science and English.
- High turn-over rate of qualified employees from the Ministry of Education..
- Matching general education outcomes with higher education as well as with the labor market needs.
- Low enrollment in vocational secondary education.
- Unpredictable population growth resulting in increased pressure on the education sector.

Long-term Objectives

- 1. Provide educational opportunities for all and ensure equality and fairness in education services in terms of quantity and quality.
- 2. Prepare students equipped with skills and knowledge needed by the knowledge-based economy.

3. Match education outputs and the Jordanian labor market needs.

Short-term Objectives

- 1. Provide a safe and sound educational environment.
- 2. Expansion of pre-schooling facilities, especially in poor and rural areas to promote early learning and nurture the will to learn.
- 3. Expand the total enrollment opportunities in basic and secondary education.
- 4. Eliminate gender disparity in basic and secondary education.
- 5. Enable students to make use of special education programs to obtain appropriate educational opportunities.
- 6. Improve education quality to enable students to achieve significant results in TIMSS and PISA international examinations and improve success rates in the secondary education examination.
- 7. To enhance actual students' participation in programs and activities to promote the spirit of citizenship and affiliation to the country.
- 8. Mainstream school-based managements.
- 9. Improve students' health standard.

Policies

- 1. Continue to provide educational opportunities for all students
- 2. Expansion in establishing public kindergartens especially in poor and remote areas in order to develop early childhood and readiness to learn.
- 3. Improving the education quality to match the requirements of knowledge-based economy (enabling students to utilize technology).
- 4. Enhance the efficiency of internal and external educational system
- 5. Ensuring gender parity and promotion of women's participation in the Ministry of Education's policies and curricula.
- 6. Enhancement of student's nationalistic affiliation.
- 7. Enabling students with special needs to acquire appropriate educational opportunities.

Second: Higher Education and Scientific Research and Creativity

Based on His Majesty King Abdullah II ibn Al-Hussein's vision and belief in human capital as a long-term investment, e governments have attached significant importance to the Higher Education sector Accordingly, successive Governments attached considerable attention to provide the Jordanian citizens with a competitive educational environment to bring up a qualified generation to keep with the global challenges. Jordan believes that a knowledge economy that relies on human development, leads to increasing the GDP and consequently to improve the living conditions of Jordanians. The human capital can contribute up to 60% to the economy, since the outcomes of the higher education sector are deemed to be the most important measures of sustainable development

In the light of the reforms in this sector, the present status in the higher education sector can be summed up as follows:

1. The number of government and private universities and intermediate universities colleges at the end of 2009:

Higher Education Institutions	Number
Public universities	10
Private universities	17
The World Islamic Sciences & Education University	1
Community colleges:	52
Colleges affiliated to Al Balqa' Applied University	14
Public colleges	6
Military colleges	6
Private colleges	24
UNRWA colleges	2

Indicator	Value
Number of Jordanian undergraduate students enrolled at the Jordanian Universities (public and private)	199,863
Number of foreign undergraduate students enrolled at the Jordanian universities (public and private)	25,739
Total Number of undergraduate students enrolled at Jordanian universities (public and private)	225,602
Number of Jordanian post-graduate students enrolled Jordanian universities (public and private)	16,055
Number of foreign post-graduate students enrolled at Jordanian universities (public and private)	3,640
Total number of post-graduate students enrolled at Jordanian universities (public and private)	19,695
Total number of undergraduate and post-graduate students enrolled at Jordanian universities (public and private)	245,297
Number of university professors in Jordanian universities (public and private)	8,313
Number of undergraduate students graduating from Jordanian universities (public and private)	42,233
Number of post-graduate students graduating from Jordanian universities (public and private)	4,613
Total number of graduates from Jordanian universities	46,814
Number of Jordanian students studying at higher education institutions abroad	27,696
Number of students enrolled at Jordanian community colleges	29,414
Number of graduates from Jordanian community colleges	8,481
Number of full time instructors at Jordanian community colleges	1,986
Number of beneficiaries from all aid funds	20,578
Number of scholarships for top secondary school students and top students at public universities, 2008-2009	1,600
Percentage of students benefiting from loans and grants at public universities (undergraduate level)	%25

During the years (2007-2009), Jordan achieved a number of accomplishments in the field of higher education, including:

- 1. Improving the quality of education through the amendment of the law pertaining to the accreditation committee of the higher education institutions and linking it to H.E the Prime Minister.
- 2. Continuing to support research projects at the national level and to support postgraduate students who excelled academically through the Scientific Research Support Fund.
- 3. Enabling needy students to complete their higher education by expanding the umbrella of the beneficiaries of the Student Aid funds by 25% in coordination with the private sector
- 4. Completing the preliminary studies for the development of the higher education towards the knowledge economy: University management and good governance, accreditation and quality control, financing of universities and development of vocational colleges, financing and supporting competitive programs between universities and increasing the number of beneficiaries of student loans.
- 5. Automating the administrative and teaching processes in the public universities in order to develop the curricula and the teaching process.
- 6. Establishing technology incubators in a number of public universities to support ideas and innovation
- 7. Continuing the establishment of EMIS at the Ministry of Higher Education.

8. Issuing new regulations (Higher Education and Scientific Research law no.23, 2009 and its amendments and the Jordanian Universities law no.20,2009)

Challenges

Despite the achievements recorded in this sector, yet it continues to encounter a number of challenges which can be summed up as follows:

- Ensuring the independence of universities and the development of governance and its institutional performance.
- Ensuring the quality of higher education outcomes.
- Matching higher education outcomes with the labor market.
- Ensuring that all applicants for grants and loans benefit from the student support fund
- Weak relationship between universities and research institutions, and the industrial and service sectors in the area of scientific research and development.

Long-term Objectives

- 1. Achieve higher education of high quality that enables human cadres to meet the society's current and future needs, and compete at both the Arab and international levels.
- 2. Promote and enhance scientific research and linking it to comprehensive development objectives

Short-term Objectives

- 1. Contribute to the reduction of unemployment rate.
- 2. Strengthen scientific research mechanisms.
- 3. Increasing enrollment in technical education.
- 4. Support undergraduate students at public universities.
- 5. Increasing the number of universities that meet the accreditation and quality assurance standards.

Third: Culture

Stemming from Jordan belief that the cultural development process is achieved through human capital/citizens rather than through institutions, our national culture is based on the principle of partnership and giving opportunities to all social and human components in Jordan to participate in the cultural development process. A major characteristic of Jordan is harmony and cohesion among its local elements and harmony with the surrounding Arab and Islamic culture, participation in human culture through the Jordanian intermediate approach is characterized by rationality, action and human capacity building.

Government institutions do not seek to become a cultural authority, rather, they seek to utilize the free and democratic environment that Jordan offers enhancing the role of culture in society so that it becomes a daily social behavior, and cultural and artistic movement this will allow culture can perform its mission through the efforts of the public and private sectors to introduce cultural services to social groups which benefit from them to enriching cultural life and promoting it in the optimal manner at local and Arab levels, participate in highlighting the Jordanian and Arab culture and heritage, support creative individuals in all cultural and artistic domains, tourism promotion, development of publishing methods through various media and means of publication as well as advancing Jordanian cultural products and linking them with economic products.

The entities associated with cultural activity include; Ministry of Culture, Ministry of Education, the Higher Council for Youth, public and private universities, in addition to the private sector through its role in cultural clubs, associations and voluntary organizations, and publishing houses, research centers and Awards creativity and creators.

There are several leading cultural centers in Jordan, their number amounting to (12) centers, the most important of which are: the Royal Cultural Center, Al Hussein Cultural Center, King Abdullah II Cultural Center in Zarqa in addition to a number of Arab and foreign cultural centers (6). The number of museums dealing with heritage and cultural heritage of Jordan number to (24) museums scattered in various governorates, the most important of which are the Martyr's Museum, National Museum of Fine Arts, the Museum of the Martyr Wasfi Al-Tal. In addition to cultural organizations that deal with literature, literary figures, art and spreading national culture throughout the country (368). Many public libraries are available in the Kingdom (104) which include books, manuscripts pertaining to all aspects of knowledge and a number of publishing houses and printing presses (300) in addition to theaters (52).

The years (2007-2009) witnessed a set of accomplishments including;

- 1. Establishment of a fund to support cultural activities.
- 2. Opening directorates of culture in all governorates of the Kingdom to ensure equal distribution of development gains.
- 3. Enactment of the Creative Dedication Statute to enable creative persons to develop their potentials.
- 4. Establishment of the King Abdullah II Cultural Center and Princess Salma Center for Childhood in Al Zarqa.
- 5. Launching the Jordan Cultural Festival to include all regions of the Kingdom.

Challenges:

Despite the achievements attained, the cultural sector is still facing many challenges including;

- Inadequate infrastructure necessary to activate the cultural movement.
- Weak coordination between official cultural institutions and civil society organizations.
- Deterioration of the economic situation of intellectuals and creators.
- Lack of public awareness of the importance of cultural development
- Weak private sector participation in the financing of cultural activities.
- Lack of mechanisms for evaluating policies, strategies and cultural programs

Long-term Objectives:

- 1. Contribute to cultural development as one of the pillars of the overall development.
- 2. Provide the appropriate atmosphere for creativity in culture and art

Short-term Objectives:

- 1. Modernization and development of centers, museums and cultural houses
- 2. Fostering intellectual, cultural and artistic innovation, promote and publish across the Kingdom.
- 3. Dissemination of cultural and artistic output.
- 4. Collection and preservation of national documents/manuscripts categorize and classify them appropriately.

Fourth: Youth and Sports

The Jordanian society is regarded as a young society with young people constituting more than two thirds of the population, hence there is considerable care for the promotion of youth as well as placing them in positions of strength and hope for the future and building on their intellectual, creative and production capacities to address global developments and challenges in all sectors.

Therefore, their potential energies should be utilized so as to develop future prospects. The political aspect is important in enhancing the youth culture and integrating them in the public life. Enhancement of political participation by youth and promotion of their role in civil society organizations is one of the policies pursued by Jordan to complete the bright image of the country's youth who are proud of their loyalty, affiliation and awareness of their rights, duties and responsibilities.

Furthermore, youth and sports cannot be separated, as sports is regarded as an effective tool in building the character of individuals Sports is an essential part of each individual's life and sport achievement is cause for national pride and a bright image in front of the world. Like other countries, Jordan seeks to support and develop the sports and youth movement, hence the Higher Youth Council, which is in charge of the promotion of the youth movement, has launched the National Strategy for Youth based on the needs of the Jordanian youth. The Jordanian Olympic Committee has been commissioned to advance sports and sportsmen to the highest possible standards.

In 2007, H.M. King Abdullah II ibn Al-Hussein launched the initiative *Jordan First* with a view to provide an institutional platform through which youth from all walks of life can interact with the policies and programs geared to them in the fields of economic, social and political development. *The Jordan First* youth commission has launched the following youth initiatives to support youth needs and creativity: Knights of Change Award, Fund to Finance Pioneering Projects, Youth, the Private Sector and Local Communities, the National Council for Creativity and Excellence, Youth Dialogue Club, Jordanian Student's Identity and the National Database.

Since the Government recognizes the importance and number of the youth people in Jordan, in the past few years it has undertaken a number of programs and projects for the youth. Youth activities have been diversified, and it included; numerous youth centers have been set up in various parts of the Kingdom now reaching to 115 youth centers, youth events have been held including camps, seminars, lectures and workshops to equip youths with different skills, enhance the values of responsibility and discipline as well as holding activities which strengthen affiliation and loyalty and consolidate the values of freedom and democracy needed to place youth as a national priority. Emphasis has also been attached to youth participation in technology and information programs and vocational training programs.

In the sports field, the Law of the Jordanian Olympic Committee for 2007 was enacted to set up an umbrella sponsoring all sport federations as well as qualification and development of sports leaders. There are now four sports cities and 14 sports complexes in Jordan .

Challenges

The youth in Jordan encounter a series of challenges which impede their ability to meet their desires and needs as well as undertaking their duties towards the homeland, themselves and the society in which they live in the optimal manner. Following are the most important:

- Poor physical infrastructure and social measures for young people to spend their leisure time.
- Increased rates of unemployment among the educated youth
- Weak systems/lack of appropriate harmonization between education and training to cover the needs of the labor market
- Lack of sufficient youth centers in comparison to the number of Jordanian youth.
- Lack of funding programs and plans to invest in youth and to support and foster innovation.
- Lack of a specialized center for the preparation of national teams and for the safety and health care of athletes.
- Lack of facilities and sports stadiums designed to allow young men and women athletic practice and effective exercise.
- Lack of sports facilities in accordance with norms and standards of the International Olympics

Long-term Objectives

- 1. Development of young people's self-consciousness and abilities, foster their sense of patriotism to effectively participate in their country's advancement.
- 2. Raise awareness on the importance of Olympic sports and co-participation in various athletic fields

Short-term Objectives

- 1. Deepening the concept of citizenship in young people, raise their awareness on rights and duties.
- 2. Educate young people and raise awareness on the importance of information technology.
- 3. Empower young people economically and help them enter the labor market.
- 4. Increase the varity of sports activities.

Policies

- 1. Development of a skilled Jordanian youth who are capable to keep pace with global changes.
- 2. Strengthening the social integration of young people in an atmosphere of democracy, tolerance and developing a sense of belonging to the homeland and loyalty to the leadership.
- 3. Enable young people to benefit from effective national investment in information technology.
- 4. Meet the needs of young people and develop their abilities to engage in the labor market.
- 5. Increase the productivity of young people and their creative contributions.
- 6. Support national athletes and team players.
- 7. Strengthen the infrastructure for youth activities and sports.

Infrastructure Upgrade

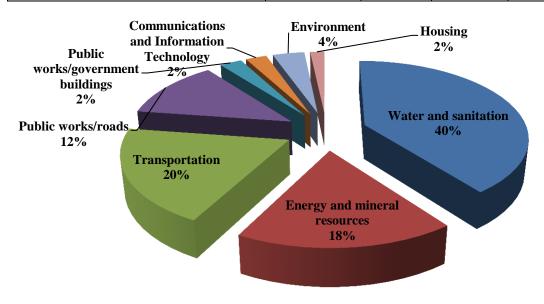

Upgrading infrastructure is inevitable if Jordan is to sustain socio-economic development and raise the living standards of its people. It is furthermore a necessity for attracting investments in the country, which will in turn have direct bearings on the competitiveness of Jordanian enterprises. Such an improvement should aim at six areas: public works including roads and government buildings, housing, water and sanitation, energy, mineral resources, communications and information technology, and the environment.

The aim here is to provide an effective and highly productive infrastructure capable to provide costeffective, systematic and accessible services. This must be sought by partnering with the private sector and further involving it in investment in this vital arena, providing for necessary legislative and regulatory frameworks, enhancing competitiveness and coping with up-to-date high-tech, but not at the expense of environmental sustainability and conservation in all sectors. The table below shows in a nutshell the financial status of this area disaggregated according to sectors:

Summary of the Financial Status, 2011-2013

(1000JD)

Contou	Total Costs		Expected Expenditure							
Sector	Total Costs	2011	2012	2013	Total					
Transportation	4,486,474	107,825	197,141	287,487	592,453					
Public works/roads	1,514,160	107,172	89,848	173,450	370,470

Expenditure ratios on sectors to total spending on infrastructure (2011-2013)

First: Transportation

Transportation, on the macroeconomic level, is essential for the development of trade, and hence of economy. The efficiency of almost all activities requires efficient transportation networks within the country to increase mobility of labour and raise production capacity by easing transportation between raw material sources and consumption destinations. Thus, an efficient transportation network will have good bearings not only on production activities but also on wholesalers, retailers and consumers alike.

Public transportation is regulated concurrently by the Land Transport Regulatory Commission (LTRC) and Greater Amman Municipality (GAM). The Commission regulates transportation in all governorates and areas outside GAM borders and Aqaba Governorate, while the GAM regulates transportation within Amman borders. Public transportation vehicles of all kinds totalled 33,377 accounting for 4% of the total vehicles in the Kingdom distributed on 1,265 internal, external and international lines, 1,160 shuttle buses, 4,282 medium busses and 4,223 small cars operating on these lines. Taxi services are offered by 15,219 cabs operated by 200 agencies, while the tourists' transportation service is provided by 264 agencies and 6,910 small cars. Vehicle rental services are provided by 467 vehicles and medium size cars are operated by 20 car rental agencies. International transportation service is provided through 110 vehicles operated by 15 international transportation companies and 10,006 external travel cars operated by 41 agencies.

Specialized road goods' transportation is operated by 238 licensed companies including the Joint Jordanian-Syrian Company for Land Transportation. Those companies own 6,745 trucks accounting for 41,9% of the total fleet. There are also 9,341 trucks owned by individuals forming 58,1% of the total fleet (16,086 trucks). An approved mechanism and electronic system are applied to regulate the entry and exit of trucks from and into Aqaba Special Economic Zone and port. At present, efforts are being coordinated with competent authorities to introduce the same type of mechanism and electronic system into other loading and unloading centres starting with the Joint Jordanian-Syrian Free Zone.

The establishment of a new and modern railway system to serve the Jordanian economy effectively and efficiently in line with a comprehensive vision of establishing local and interregional integration. It will link production plants inside the country but also with those of other countries in the region for the sake of better economic integration, smoother movement of goods and passengers, enhanced tourism, and more efficient and less costly labour movement between Arab countries. Such an achievement will eventually protect the environment and safety and help establish new projects contributing to the promotion of Jordanian economy. Considerable revenues are expected to accrue and a lot of job opportunities are also expected to be created in this sector. It will also encourage the private sector to take part in relevant infrastructure investments particularly in the railway network establishment and operation.

To implement the railway project, a comprehensive study has been conducted covering the financial and economic assessment of the feasibility of its implementation locally and regionally. It also incorporated a blueprint showing the paths of the right of passage for the railway line and reflecting the main elements of the study, mainly the identification of production centres, transportation volume, proposed alternatives to preliminary paths, connection points, costs of transportation by railway compared with other modes, social, economic and geopolitical effects, environmental effects, which, in their turn, have enabled and encouraged decision-makers on the governmental level to agree to proceed with the railway development program and determine the optimal pattern of its structure, promotion and introduction in a way to attract investors.

Jordanian railways are managed and operated by two agencies: the Jordanian-Hejaz Railway, which operates a number of passenger and freight trains between Amman and Damascus, and organizes trips for tourists. The Aqaba Railway, which carries between 2 and 3 million tons of phosphate each year from the mines (Al-Hasa, Al-Abiadh and Al-Shaidiya) to Aqaba port for export. Preparations are underway to start the implementation of the new Jordanian railway lines linking Jordanian cities and neighbouring countries with standard and modern railway lines for passengers and cargo, which will help improve the areas through which the railway line passes.

The only execute of sea to Jordan, is the strategically located at the arm of the Red Sea, the Aqaba Port, which is endowed with a fairly advanced infrastructure. It is regulated by Aqaba Development Corporation and is managed operated by the Ports Corporation and other companies from the private sectors. There are also two joint companies, namely the Jordanian-Syrian Maritime Company, which is a joint government venture by Jordan and Syria (under liquidation), and Al-Jisr Al-Arabi Maritime Company, a joint Jordanian-Egyptian-Iraqi company. There are 213 companies licensed to exercise maritime activities, 38 registered ships flying the Jordanian colours, and 1,055 vessels (boats and yachts). To increase the capacity of Aqaba port and raise its efficiency, a number of specialized docks in the southern area are being built, with main port managed and operated jointly by the public and private sectors.

As far as the airway transportation, the Government of Jordan has taken several measures to liberalize the airway transportation sector. The Civil Aviation Commission has been set up as a legal and actual successor of the Civil Aviation; it practices its authority in accordance with the Law of Civil Aviation, in a bid to make a split between the respective roles of the regulator and operator. The Civil Aviation Regulation Commission has become an organizational and monitoring authority entrusted to the organization and controlling of the civil aviation and air transportation sector. Operational affairs are vested with those companies operating Jordanian airports. To complete the separation process, clear delineations were introduced between regulatory functions and service provisions as required by the International Civil Aviation Organization (ICAO).

Jordan currently has three airports: Queen Alia International Airport, Amman Civil Airport and King Hussein International Airport/Aqaba. Queen Alia International Airport is the main gate for the airway transportation traffic in Jordan. It has been rehabilitated and expanded and is being operated by the International Airport Group Company under the supervision of the Ministry of Transport. Amman Civil Airport is managed and operated by the Jordanian Airports' Company and the Aqaba Company for Airports runs and operates King Hussein International Airport under the supervision of the Aqaba Development Company. There are 10 Jordanian airlines companies operating in the airway transportation field. The Royal Jordanian Airways Company, the national carrier, provides regular airway transportation services through 54 routes. Royal Falcon Airlines provides regular airway transportation services on four routes in addition to the operation of provisional airway transportation. There are eight academies and training centres, six maintenance centres and two factories to manufacture light airplanes used for training purposes.

Here are the main achievements in 2007-2009 in the Transportation Sector:

Public Transportation:

1. Legislative environment has been introduced to regulate investment in public transportation allowing for the licensing of private operators of international, main and domestic roads, new regulations have been put in place for Al-Mumayyaz taxi cabs, crossings and Bridges' taxis, limousine car services, and necessary regulations have been created for the provision of public service transportation for persons with special needs at suitable costs.

- 2. A comprehensive plan for public transportation has been conducted with the aim of establishing an effective, integrated, safe, reliable, environment-friendly public transportation system capable of coping with the needs of all segments of society.
- 3. Sampling of demand for taxi services is completed.
- 4. An agreement was signed with the Investment Division at the Social Security Corporation to build and operate the unified departure terminals for external trips vehicles in Um Swayoniya
- 5. The passenger information system is applied. As Forty Six information signs have been installed at the New Aghwar Complex in Irbid and passenger information system has been installed on the Commission's website.
- 6. Satisfaction of service recipients has risen to 62% in 2009 compared with 55.6% in 2006.
- 7. A number of 897 out of 2,997 of public transportation vehicles were either cancelled or replaced in accordance with relevant decision by the Council of Ministers.
- 8. A partnership council to bring together the Public Transportation Regulation Commission and competent authorities concerned with public passenger transportation sector is created with a view of enhancing the principle of partnership between the public and private sectors.
- 9. A centre to monitor the performance of public transportation vehicles is created using remote tracking systems in new buses and newly established surveillance cameras at the departure and arrival terminals.
- 10. A new VIP passenger transportation service is created on the Amman-Aqaba route.

Road Freight Transportation:

- 1. Specialised freight road transportation companies are included in the Law of Investment No. 68 for the year 2003.
- 2. Jordan has acceded to the Convention on the Contract for the International Carriage of Goods (CMR).
- 3. Three bilateral agreements are signed on road passenger and freight transportation between Jordan and Bulgaria, Azerbaijani and Kazakhstan. Another agreement and MOU has been signed with Iraq in this regards.
- 4. A memorandum of understanding between Jordan and Syria on the exemption of trucks and passengers in both counties form dues for the purpose of promoting and developing passengers and freight transportation between the two countries.
- 5. A number of 1,306 trucks have been either cancelled or replaced pursuant to the replacement and modernising policy of trucks.

Railway Transportation:

- 1. A strategy has been drawn up for developing Jordanian railways including the construction of a 1,000 km long modern standard railway network connecting some major cities together and to production centres, and connecting Jordan with neighbouring countries.
- 2. Maintenance is provided for mobile equipment and infrastructure to ensure sustainability of Aqaba Railways Corporation.
- 3. The approval from Cabinet of Ministers on the accession of Jordan as a partner in the Intergovernmental Organisation for International Carriage by Rail (OTIF).

Marine Transportation and Seaports:

- 1. Amendments to the Law of the Marine Authority No. 38 of 2008 has been passed.
- 2. The requirements of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW) have been fully achieved to exchange recognition of marine education, training and certificates.
- 3. 10 bilateral agreements have been signed with member countries of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW) to exchange recognition of marine education, training and certificates.
- 4. An agreement was signed to provide ship monitoring services and identifying their identities according to the requirements of the Jordanian Marine Organization.
- 5. Passenger terminal at Aqaba Port has been rehabilitated.
- 6. The wood dock has been rehabilitated to enable the docking of larger gas shipping tankers and docking by ships at night.
- 7. All docks of the main harbour of Aqaba Port including supporting docks infrastructure, civil concrete works and cathodic protection.
- 8. Treatment was made available for dust resulting from loading phosphate.
- 9. Electronic gates have been installed at the main entry point to Aqaba Port according to port security requirements.
- 10. An agreement has been signed with an UAE company coalition to rehabilitate the land of the main port after it has been relocated to the southern coast.
- 11. Necessary equipment has been purchased and installed for the operation of wireless communications with ships in Zone (A).
- 12. Inspection and monitoring are carried out on incoming ships to verify their compliance with maritime standards of safety and security.
- 13. Control is exercised in respect of vessels in territorial waters to verify compliance with maritime standards of safety and security.
- 14. Ships entering into territorial waters are controlled, monitored and communicated with.
- 15. The work of companies performing maritime activities is regulated.
- 16. A project for the development of sea services at Aqaba Port has been implemented (ship towage and piloting).
- 17. First phase of the Logistic Services Village Project is completed.

Air Transportation:

- 1. The Civil Aviation Law No. 41 for the 2007 was enacted. Related implementing bylaws and regulations have also been put in place.
- 2. The Civil Aviation Regulation Commission is established as a regulatory and organizing authority.
- 3. The Jordanian Airport Company has been established to operate Amman Civil Airports and any other future airports.
- 4. Queen Noor Technical College is privatised and sold to the private sector.
- 5. Royal Jordanian Airlines is privatised and changed into a public joint-stock company.
- 6. Ownership of the International King Hussein International Airport has been transferred to Aqaba Development Corporation, while management and operation are vested with Aqaba Airport Corporation.

- 7. An agreement has been signed for the rehabilitation, expansion and operation of Queen Alia International Airport on a **Build-operate-transfer** (BOT) basis with an international coalition under management by the International Airport Group Company.
- 8. Functional separation is introduced for air aviation services as a service provided as a prelude to its complete separation from the Commission.
- 9. Jordan is declared an open sky zone on the principle of reciprocity.
- 10. 24 agreements have been signed with Arab and non-Arab countries to liberalize sky, the total number being 89 countries tied to Jordan with air transportation agreements.
- 11. Aviation institutes, colleges and academies have been included in the Law of Investment No. 68 for the year 2003.
- 12. The northern runway at Queen Alia International Airport is rehabilitated and modern aviation and airspace monitoring equipment have been introduced

Meteorology

- 1. IP-VPN system is introduced to connect monitoring stations with the National Centre for Meteorological Forecasting and the directorate's centre at Amman Civil Airport.
- 2. The number of meteorological stations has risen to 30 after the installation of eight new stations.
- 3. The satellite station has been upgraded to receive cloud images (Metosat Second Generation (MSG2))
- 4. The system is updated to receive meteorological information (Messier system).

Railway Transportation:

- 1. The Council of Ministers approved the project implementation structuring including the establishment of a corporation to be the proprietor of the infrastructure. Such a corporation can be owned either by the government alone or jointly by the private sector for the operation and maintenance of the railway line.
- 2. A decision has been issued for the acquisition of land for the use of the National Railways Network.
- 3. The Cabinet of Ministers endorsed Jordan's associate membership in OTIF, an organisation concerned with the regulation of international railway transportation.

Challenges

Despite all achievements, this sector is still facing a number of challenges most important of which are the following:

- No institutional framework organizing the operations of public transport means owners (individuals own 85% of public sector means).
- Week infrastructure and poor quality of services at entry and departure stations.
- Inefficient design of public transport network.
- Authorities and commissions have overlapping functions.
- No legislation regulating freight transportation and associated activities.
- High average service life for passenger and metal vessels bringing the level of security down.
- Not enough road transport centers and inefficient transport logistics.

- Lack of sufficient and comprehensive data about the sector and its reality in the Kingdom and neighboring countries.
- Low trade volume (to and from Jordan) as a result of the financial crisis, and its impact on the national economy.
- High investment cost in rail transport leading to private sector investment.
- The rapid global development of modern transport systems, tools and techniques.
- Regional competition, particularly in the areas of land, sea and air transport.
- High capital and funding costs for rail projects.

Long term objective

1. Provide safe, effective and economic transportation services which preserve the environment to make Jordan a regional hub of transportation and logistics.

Short term objective

- 1. Develop and regulate public transport and its supporting services and facilities in all urban and rural areas in the Kingdom.
- 2. Establish a new modern railway network to serve the Jordanian economy, efficiently and effectively.
- 3. Develop and regulate transportation of goods by road.
- 4. Liberalize air transport.
- 5. Develop and organize air transport services.
- 6. Develop the institutional framework and operational performance of the Jordanian Airports.
- 7. Develop a comprehensive and integrated database for all transport sectors.
- 8. Regulate and develop maritime transportation, improve its efficiency and quality of its services to enhance its competitiveness in accordance with international standards and practices.
- 9. Develop meteorology studies.
- 10. Develop the Hejaz railway its main function is passenger transportation.

Policies:

- 1. Create an effective and sustainable institutional framework for public transport services.
- 2. Improve mobility of citizens in urban and rural areas.
- 3. Raise the operational efficiency of public transport services and improve the quality of service provided.
- 4. Develop environmentally sustainable transport services.
- 5. Establish a new modern railway network to serve the Jordanian economy, efficiently and effectively.
- 6. Raise the level of road freight transport along with its support services and facilities and enhance its competitiveness and regulation.
- 7. Encourage investment in air transport services and facilities.
- 8. Enable the Aqaba railway to transport phosphate in the transition period.
- 9. Organize maritime transportation, and encourage investment.
- 10. Encourage and attract ship registration.
- 11. Raise efficiency and effectiveness of Meteorology.
- 12. Raise the capacity of the Jordan-Hijaz Rail way to serve internal and external tourism.

Second: Public Works

A- Roads:

Jordan has been working to establish and develop a network of roads connecting cities, villages, and communities, in addition to locations of industrial and agricultural production, and tourism and archaeological areas and linking with neighboring countries. This network has evolved significantly in terms of design, construction, maintenance and promotion of the requirements for traffic safety to keep up with the latest developments and techniques used in modern roads construction I with a total length of roads reaching (7891) km in 2009, distributed as follows: main roads (3249) km, secondary roads (2173) km, rural roads (2469) km, in addition to a number of agricultural roads (8204) km.

Year	Rural (km)	Secondary (km)	Main (km)	Total (km)
1990	1723	1679	2639	6041
2000	2275	2059	2911	7245
2008	2446	2139	3231	7816
2009	2469	2173	3249	7891

The lengths of main, secondary and rural roads by governorates are as follows:

Governorate	Rural (km)	Secondary (km)	Main (km)	Total (km)
Capital	331	222	367	920
Irbid	343	304	272	919
Mafraq	366	294	444	1104
Balqa	360	169	214	743
Zarqa	164	149	303	616
Karak	223	179	311	713
Tafilah	151	93	195	439
Ma'an	114	249	563	926
Madaba	133	122	63	318
Jerash	121	120	85	326
Ajloun	74	171	75	320
Aqaba	89	101	357	547
Total (km)	2469	2173	3294	7891

The roads sector has witnessed many accomplishments most prominent of which are the following:

- 1. Construction of 45 main, secondary and rural roads 322 km long with an approximate cost of 230 million dinars.
- 2. Construction and re-construction of rural roads in various governorates.
- 3. Adoption of the Safety Audit system for roads to assess all of the elements of current road traffic safety after taking all necessary remedial measures.
- 4. The adoption of a unified code for highways and the introduction of new specifics when it comes to call for proposals schemes.

Challenges

Despite the achievements, but the public works sector still suffers from a number of challenges including:

• The maintenance of the road network to sustain the technical level required.

- The instability of prices of construction materials.
- The need to unify the terms of references of the legislative framework for the development and proper organization of the sector.

Long term objective

Provide safe roads with economic and development returns.

- 1. Maintain safe roads which would in turn lead to economic return and development.
- 2. Provide traffic safety standards for roads.
- 3. Maintain primary and secondary roads and rural areas.
- 4. Achievement of high institutional performance.

Policies:

- 1. Provide solutions to traffic through intersections with high level of safety.
- 2. Implement elements of traffic safety.
- 3. Install Road lighting according to international standards.
- 4. Carry out Regular maintenance of roads in the Kingdom.
- 5. Construct Control axis roads/intersections according to regulations to ensure road safety.
- 6. Expand the scope of developmental pathways which contribute to overall social development, economic and environmental returns.
- 7. Link provinces, border points and economic sites (touristic and industrial) with a network of primary and secondary roads.
- 8. Serve the villages and communities in remote areas through a network which promotes access to services.
- 9. Link agricultural sites to primary and secondary roads through agricultural roads.
- 10. Encourage partnership between private and public sectors for the implementation and maintenance of various projects, especially major ones.

B- Government Buildings

The Government Buildings Unit has been established to secure the needs of ministries and governmental institutions, embassies and diplomatic missions through identifying buildings that meet certain standards and requirements. The unit has worked on coordination and following up on (821) projects pertaining to government buildings in all governorates valuing (601) million JDs, and these projects were divided according to the nature used to (schools, hospitals, health centers, buildings, palaces of justice and courts, clubs and youth centers, border posts and other projects). The unit will monitor the implementation and supervision of government buildings projects within the Executive Development Program for the years 2010-2012, which will in turn contribute to the promotion of various economic sectors.

Challenges

Despite the achievements realized, the government building sector is still facing a number of challenges most important of which are the following:

- A large number of government buildings are rented.
- Lack of suitable plots of land, and if available, land prices are high.
- Lack of an integrated database of government-owned and leased buildings as well as details on the technical state of existing buildings.

Long term objective

- 1. Provide leading government buildings with a distinctive identity that would meet the needs of users and service recipients.
- 2. Provide border posts that would meet the needs of arriving and departing passengers.

- 1. Increase the number of government buildings that comply with service and economic standards.
- 2. Maintain government buildings through a sustainable methodology in partnership with the private sector.
- 3. Provide an integrated database of government buildings.
- 4. Increase the number of border canters and border crossings to provide services in compliance with international standards.

Policies

- 1. Provision of modern, environment-friendly and energy-saving government buildings.
- 2. Encouraging partnership with the private sector to promote private investments for implementation of projects.
- 3. Phasing out from rented government buildings.
- 4. Raising the level of services provided at the border crossings.

Third: Housing

Housing is one of the important sectors in the Jordanian economy. Residential buildings in the total fixed capital composition in the 2008 current prices stood at about 40%. Besides that, it makes a major contribution to ensuring suitable housing for all Jordanian citizens. Only 0.02% of the houses are built of temporary materials. The density ratio is 1,4 individual per room. The individual's share of the house's area is 20 m² compared with the world average of 13m². In addition, the rates of inhabited houses connected to water, power and sewage networks are 97.2%, 99.8% and 58.9% respectively.

Estimations of housing needs in the Kingdom resulting from population growth, raising new families, reduction of crowdedness rates in houses, replacement of marginal houses and acceptable annual depreciation of houses for the period of 2010-2013 indicated that the annual average need is 33,000 residential units, two-thirds of which are for limited and low incomers and the poor. The following table shows the estimated housing needs for 2010-2013 by governorates:

C 4		Ye	ears		m . 1
Governorate	2010	2011	2012	2013	Total
Capital Amman	12681	12788	12892	12996	12839

Total (km)	32,645	32,887	33,332	33,777	33,160

The housing sector in Jordan is characterized by being active, dominated by the private sector and is mainly by individuals. The public sector also plays an important role in meeting the housing needs of some categories of citizens and governmental employees. This sector is controlled and regulated by the General Corporation for Housing and Urban Development. Several entities contribute to its advancement including for example the Military Housing Corporation, which was established in 1969, cooperative housing societies in all governorates, housing funds of Ministries and government institutions, and some non-governmental organizations and lending institutions. The private sector contributes to the provision of housing for certain segments of the society, especially the high and medium incomers.

The participation of the entities and individuals concerned with the production of residential apartments can be classified as follows:

- 1. Individual activities Land owners result in 71.2% of the total housing production.
- 2. The private sector which is organized by investment companies and enterprises that invest in the housing sector through housing projects resulting in 26.5% of total production.
- 3. Cooperative housing societies accounting for 0.04% of total production.
- 4. The public entities in the public sector whose share is 2.36% of the total production.

Worth mentioning here. Is that the public sector's production of served land vouchers is not included in the above rates. It is meant to enable citizens to have access to housing and building within their own capacities and is therefore considered to lie within individual construction activity.

The following table shows the number of licenses, licensed areas and costs of new residential buildings for the period 2006-2009:

Indicator	2006	2007	2009
Number of licensed residential units	37719	30146	23658
Number of licenses of residential buildings	12623	10191	10677
Total area of residential buildings (one thousand meters)	6696	5210	4214
Estimated costs of residential Buildings (one thousand dinar)	779,098	588,106	636,135

The housing sector in Jordan has witnessed numerous achievements during the period from 2007-2009, the most important can be concluded in the following:

- 1. Construction of more than 4000 residential units as direct production by the General Corporation for Housing and Urban Development in various parts of the Kingdom.
- 2. Signing 52 partnership agreements with the private sector institutions to implement housing projects resulting in about 12,000 residential apartments and about 10,000 served land vouchers of which nearly 2010 apartments have been built and nearly 5670 served plots of land vouchers have been issued. In addition, two agreements have been signed to construct two residential cities (Almajd and Ahl Ahlazaim) and 14 agreements to implement the Royal Initiative for Housing projects.
- 3. About 1000 government employees were awarded with housing loans supported by banks and financial institutions to build, purchase or maintain their houses.
- 4. Launching the Initiative by HM King Abdullah II for Housing "Sakan Kareem li Aish Kareem" (Descent Hosing for Decent Living) to enable 100 thousand citizens to obtain suitable housing during for the period (2009-2013). The initiative is to be implemented in two phases:

First phase, which is composed of two components:

First component: Provision of residential apartments at sponsored prices according to the following mechanism:

- Construction of residential compounds with integrated services through contracts with investors in the housing sector. A memorandum of understanding has been signed with the Housing Investors' Association to build residential complexes (about 8500 residential apartments) at 11 sites in five governorates namely Amman, Zarqa, Irbid, Madaba and Aqaba on lands owned by the General Corporation for Housing and Urban Development with all infrastructure services.
- 256 residential apartments have been purchased in the Custodian of the Two Holy Mosques (King of Saudi Arabia) Project in Zarqa and 68 apartments at Al-Zuhoor Project in the Governorate of Amman, in addition to contracting to make use of Al-Firdaws Project in Amman, which consists of 364 residential apartments in two phases. The qualified beneficiaries of this project have been given all facilities on equal footing with those benefiting from other implemented projects within the initiative.

Second component: Providing served plots of land and granting direct financial support:

• Granting qualified citizens served plots of land. Twenty-three projects have been launched in various Jordanian cities consisting of 3400 served plots of land of which 10 projects were been completed and the apartments were distributed to citizens by the end of 2009.

Second component, which consists of two basic elements:

First element: Construction of residential townships supplied with integrated services within the main cities in the Kingdom with an average of one township each year serving 20 thousand Jordanian households.

Second element: Provision of served plots of land in various districts in the kingdom. It is expected to implement about 40 projects in the centres of distant districts and governorates during the period 2011-2013 to serve more than 20 thousand households

Challenges:

Despite the achievements realized, the housing sector still encounters a set of challenges most important of which are the following:

- Citizens' limited income and the wish expressed by the majority of them to have access to concessional financing.
- High housing costs reflecting soaring prices of building materials, housing land and costs for providing infrastructure.
- Limited comprehensive information about the housing sector.
- Lack of small sized housing plots of land suitable for low and medium incomers.

Long term objective

Provide appropriate living conditions for citizens in all regions of the Kingdom.

- 1. Enhance the sector's productivity to meet housing needs in Jordan.
- 2. Manage and regulate the housing sector.
- 3. Provide an integrated database on the housing sector in Jordan.

Fourth: Water and Sanitation

Jordan is one of the world's most water scarce countries. In fact, world fourth poorest country in this area. Jordan depends on rainwater for replenishing its surface and groundwater supplies. Population increase, as well as economic and agricultural growth, have added the strain on water demand. Water supplies have increased from 801 million cubic meters in 1999 to 936 million cubic meters in 2008. Resources averaged 778 million cubic meters in 2008, but need to be bolstered to 1,662 million cubic meters by 2022. In fact, water demand is expected to reach 1,673 million cubic meters by 2022.

Up to 98 % of the population was connected to the water supply networks by 2008. Water demand for irrigation amounted to 71 % in 2008, and supply reached 64 %. Municipal 30%, industrial 3% and tourism demands 1%.

The institutions involved in this sector are paying maximum attention to water quality, because of the effects it has on health and the environment. Routine control programs (geographical and demographical) constitute 100% of the requirements of the effective Jordanian specifications of drinking water. About 94% of the chemical tests required by the Standard Jordanian Specification of Drinking Water (No. 276 for the year 2008) are covered in addition to 95% of the chemical and biological variables in the water discharged by factories for the requirements of Specification (No. 893 for the year 2006) and 93 % of the chemical and biological variables required by the control requirements of waste water and covering 100% of the required tests in the Jordanian specifications for the microbiological and radioactive criteria. As result of water shortage, ground water is overpumped by nearly 130% of the average safe yield of pumping. There are hundreds of water wells illegally exploited resulting in shortage of underground water, which reaches 167 million cubic meters in 2008.

The Government of Jordan has constructed a number of large, medium and small dams in order to increase water storage. Ten dams have been built with a total storing capacity of about 325 million cubic meters. It is worth noting that there are 20 desert dams with a storing capacity of about 33 cubic meters in desert areas. It is also possible to increase the storing capacity by building more desert dams, pools and holes.

The issue of waste water has been given maximum attention, reflected in the provision of sewage services for citizens. The majority of large cities and large communities are provided with sewage networks within standard criteria and specifications. The rate of household served by the sewage network reached 64 % in 2009 and the number of waste water treatment plants amounted to 23 in the same year. The quantity of waste water inflow to the treatment plants was about 114, 7 million cubic meters in 2009. These plants produced about 110 million cubic meters of treated water about 93% of which is restricted for agricultural purposes (alone without mixing) or unrestricted (after being mixed with fresh water) for industrial purposes.

Achievements have been made in the water and sanitation sector at various levels. The Management Policy of Demand for water was developed in 2008. It is aimed at making the maximum use of water resources, promote the efficiency of its use, and preserve it to realize social and economic growth and environmental protection. The policy consists of two sections: management of water demand for domestic, institutional, tourism and industrial purposes and management of demand for water in the irrigated agriculture sector.

As for the involvement of the private sector in the management of water facilities, the Jordan Water Company (miyahuna) is in charge of the management of water and waste water services in the Amman Governorate. It started its work early 2007. A program was designed to support operation management and subscribers in the management of water in the Governorate of Madaba with participation by the local private sector. A three-year contract was signed and implemented resulting in the improvement of collection in addition to the completion of Al-Khirba Al-Samra waste water Treatment Plant and starting to operate it on a BOT basis, and a water sector audit unit has been established.

In partnership with the private sector, the Jordan Valley Authority has signed a contract with six associations of water users in Jordan Valley to manage water distribution among the by member farmers of these associations. The number is expected to rise to ten associations in 2010.

At the level of strategic projects in the water sector, the Wahda Dam Project has been complemented with a capacity of 110 million cubic meters. Al-Khirba Al-Samra treatment plant has been established and is now fully operative. The private sector has started to operate Al-Zara Ma'een project. In addition, the implementation of dragging Al-Disi water to Amman project was started. Studies have been initiated on the project to connect the Red Sea and the Dead Sea after international donors have provided the funding needed for the feasibility study and environmental and social assessment.

In connection with sanitation, several treatment plants have been established, equipped, developed and expanded. Other projects include the establishment of plants, carrying lines and extension of sewage networks. In addition, designs have been developed and studies have been conducted for several new projects such as the sewage plant project in South Amman, Naour waste water project and Greater Irbid waste water project.

Challenges:

Despite the achievements realized, the sector is still facing numerous challenges which can be classified as challenges of water resources, water supply, sanitation services and institutional and financial services:

Water resources:

- Limited renewable water resources.
- Over-pumping of the strategic water storage.
- Securing Jordan's rights of shared water resources.

Water supply:

- The gap between water demand and supply is increasing.
- The share of renewable water resources Per capita is decreased to less than 15% of the global water poverty limit.
- The weak performance of water supply and distribution systems.
- Irrigation demand is about 71% of the total water demand, and about 64% of water supply.
- High percentage of non revenue water.

Sanitation services

- Limited capacity of treatment plants and water pumping stations in the treatment of sewage water both in quantity and quality.
- Housing and urban expansion are imposing greater demand for sanitation services.
- Sanitation networks are neither efficient nor sufficient.

Institutional and financial challenges:

- Preparation and Activation of the water laws and legislations.
- Re-Structuring of the institutions operating in the water sector.
- Capability to retain and recruit qualified resources in the sector due to inadequate salaries and opportunities available in local and external markets.
- Drinking water tariffs and the inability to recover the operational and capita costs.
- The marginal cost of irrigation water is high while the irrigation water tariff is very low.
- High costs of capital projects and inability to secure the finance needed for investment in water sector project

Long term objective

- 1. Securing uninterrupted quality water supplies to the household at reasonable tariffs.
- 2. Securing adequate water supplies for various sectors at reasonable tariffs to serve the economic, social and environmental sustainable development objectives.
- 3. Improving the usage of available water resources.
- 4. Expansion of wastewater facilities to rural and urban clusters across the kingdom.

- 1. Search for new water resources.
- 2. Raise the storage capacity of dams and water harvesting.
- 3. Reduce over pumping of groundwater to sustaining it.
- 4. Improve distribution networks water trunk lines and reduce non-revenue water.
- 5. Use treated water in activities with high yield, environmental and economic returns.
- 6. Improve the quality of potable and irrigation water.
- 7. Cover new regions with sanitation services.

Fifth: Energy and Mineral Resources

The availability of energy services, their quality and affordability are the main element in promoting local investments, attracting foreign investments, enhancing corporate competition and directing economic growth. Because of the constant rise of oil prices in global markets, it has been necessary to give maximum priority to the issue of energy needed for comprehensive and sustainable development in terms of diversifying sources and forms of imported energy, development of local and renewable local energy, and improvement of energy use efficiency in various sectors to ensure safe supplies of energy services for all segments and sectors of society. Those are the issues underlined by the National Comprehensive Strategy for the Energy Sector for the years 2007-2020.

Jordan lacks conventional energy sources and currently imports 96% of its needs for the energy mix basically made up of crude oil, oil products and natural gas. Local sources provide not more than 4% of such needs and renewable energy contributes only to a small proportion of this mix. The current cost of imported energy forms about 14% of GDP. The natural gas is now used to generate 80% of the generated electricity. The total primary energy used in Jordan in 2009 was about 7,66 million tons of oil equivalent. Oil products constituted about 57% while natural gas constitutes about 40%. One refinery operates at present in Jordan with a capacity of 14 thousand tons/day and there are 416 fuel distribution stations, 839 gas distribution agencies and 146 gas cylinders warehouses all over the governorates to meet citizens' needs.

The volume of combined generation capacity in Jordan at the end of 2009 was about 2749 mega watt, including 1098 mega watt steam generation, 597 mega watt gas generation and 980 mega watt compound cycle generation. The additional generative capacity needed up to 2020 is estimated to be 3300 mega watts. The number of electricity transformers in the Kingdom (400/132 kV) 42 stations. The length of high tension networks is about 4120 km, which is in line with the development of the Jordanian electricity system. Per capita of energy consumption in 2009 was 1300 Kilograms of oil equivalent, while per capita of electricity consumption is 2000 kilowatthour. These are relatively high rates compared with those in other developing countries.

The energy sector continues to undergo growing increase in the demand for oil products and electric power, which is expected to rise by 5.5% and 6.3% a year respectively until 2020. The National Strategy for the Energy Sector has estimated the volume of the investment needed in the energy sector's infrastructure projects during 2007-2020 by 14-18 billion Jordanian Dinars.

The mining sector in Jordan is limited to non-metallic mineral (industrial rocks), especially phosphate, potassium, cement, building materials and calcium carbonate. The mining sector consists of two parts, namely extracting mining industries including phosphate, potassium, bromine, magnesium, salt, calcium carbonate, volcanic tuff, treated zeolite, treated silica, travertine, quarry and mine products and Dead Sea clay and salts. The second part is mineral manufacturing industries including chemical fertilizers, chemical acids, aluminium fluoride, calcium oxide and lime paste, lime bricks, cement, white cement, rock wool, ceramics, and cosmetics manufactured of Dead Sea clay. The main products of the Jordanian mining sector are cement, phosphate, potassium and chemical fertilizers. The mining sector's share of GDP in 2008 was about 15.2%. The extracting industries revenues were approximately 56.5% of the total mining sector's revenues, while manufacturing industries accounted for about 43.5% of such revenues. To raise the mining sector's share in the national economy, the Government of Jordan has adopted the policy of maximizing the added value and efficiency rising through the privatization of the major institutions in this sector starting with the Cement Factory.

As for nuclear energy and the utilization of local renewable energy re-sources, the renewed strategy of the energy sector for 2007-2020 has focused on increasing the share of renewable energy in the total energy mix to reach 10% by the year 2020 and reduce the energy consumption volume by 20% in various sectors in that year without affecting living standards and production and, consequently, reduce the cost of imported energy at the national level. In this context, numerous economic and technical studies have been conducted to rationalize energy consumption in a large number of industrial and commercial companies which are the highest energy consumers. These studies have shown that there are opportunities to reduce energy consumption.

A lot of programs and initiatives have been implemented to enhance the energy sector in Jordan, to diversify its sources and forms, and to open investments with the private sector and improve the efficiency of energy sources use with a view to meeting the growing demand for energy against rising global oil prices and reducing the financial burden on the public budget as a result of importing oil products and reducing risks associated with importing energy from a single source.

During the years 2007-2010, numerous achievements have been realized in the energy sector most important of which have been the following:

First: Oil and Natural Gas

- 1. Termination of the Jordanian Oil Refinery Company' contract in 2008 and signing two settlement and service agreement with the company to continue distributing oil products till up to the end of 2008. The service provision agreement was again extended to the end of 2010.
- 2. Liberalization of oil products' prices according to world prices early in 2008.
- 3. Completion of the Arab Gas Pipeline within the Jordanian territories (from *Rihab* to the Jordanian-Syrian borders).
- 4. A contract was concluded with the Egyptian Government to secure additional natural gas supplies. Provision of Al-Samra Electric Power Generation Plant (second phase) and East Amman Electric Power Generation Plant (first special generation) were supplied with natural gas, hence, more than 80% of the generated electric power is now produced using natural gas imported from Egypt.
- 5. Marketing four areas in the Kingdom for exploration, prospecting and excavation for oil and gas. There are now four exploration areas covered by concessions agreements with world oil companies for exploration and exploitation and one area covered by a concession with the National Oil Company.
- 6. Signing agreements with British Petroleum on 25 October 2009 as a strategic partner in the development of Al-Reesha area. The provisional law approving the agreements was published in the Official Gazette on 3/1/2010.

Second: Electric Energy:

- 1. Completion of the implementation of the first special electricity generation project / East Amman with a total capacity of 370_ mega watts.
- 2. Signing the agreements of the second special electricity generation project / Al-Qatrana with Al-Qatrana Electric Generation Company on 29 September2009. This company was formed by Kibko and Zenal. Successful financial closure was reached on 24 November 2009.
- 3. Expansion of Al-Samra Electric Generation Plant:

- a. The third and fourth gas turbine units (second phase) were transferred to a compound cycle and the date of the commercial operation of the unit was 12 June 2010.
- b. Two gas turbines (simple cycle/third phase) were added. The commercial operation of the first gas turbine unit has been set for the end of November 2010 of the second gas turbine unit for the end of January 2011, thus Al-Samra Plant will operate with 880 megawatts.
- 4. Privatization of the Central Electricity Regeneration Company, Electricity Distribution Company and Irbid Governorate Electricity Company have been privatized. Al-Samra Electric Company is to be privatized in 2010.
- 5. Signing an agreement of principles with the Estonian Company Este Energy to construct an electric power generation plant by exploiting the direct burning of oil shale to generate electricity with a capacity of 600-900 megawatts and start commercial operation in 2015.

Third: Mining and local Energy Sources Exploitation:

- 1. Granting Shell Corporation a concession to exploit deep oil shale to produce oil.
- 2. Signing memorandums of understanding with 8 global companies to conduct economic-banking feasibility studies on oil production from surface oil shale. Two companies have submitted their economic-banking feasibility studies.
- 3. Completion of negotiations with the Estonian company OSEJ on a concession agreement for oil production from surface shale oil inAl-Attarat. The Council of Ministers has approved this agreement on 5/5/2010 and the agreement was signed on 12/5/2010.
- 4. Creation of a computerized database on oil and minerals connected with the internet network (on-line data room) with a view to facilitating the provision of digital information for investors.
- 5. Issue of 100 excavation licenses, 51 mining concessions, 4837 export permits to various companies and 778 quarry licenses.

Fourth: Nuclear Energy:

- 1. Endorsement of the Law of Nuclear Energy No. 42 of 2007 and its amendments and the Law of Radioactive Prevention, Security and Nuclear Safety No. 43 for the year 2007.
- 2. Establishment of the Jordanian Atomic Energy Commission and the Radioactive and Nuclear Action Regulation Commission.
- 3. Developing the strategy of the Jordanian Nuclear Program involving the establishment of nuclear reactors and uranium exploitation.
- 4. Signing several agreements and memorandums of understanding in the field of nuclear cooperation with friendly advanced countries in the nuclear field.
- 5. Starting to explore for and exploit natural uranium ore and conducting a feasibility study of uranium extraction from phosphoric acid.

Fifth: Renewable Energy and Energy Consumption Rationalization:

1. The tender of the first project to generate electric power using wind energy with a capacity of 40 mega watts in Al-Kamsha (Jerash) was announced. Negotiations are in their final phase with a Greek company to reach agreement. The project is due to start operation in 2011 after successful negotiations.

- 2. The procedures to announce the tender for the second project to generate electricity from wind with a capacity of 80-90 mega watts in Al-Fjaij/Alshobak. The preliminary phase has been completed and the project is planned to start operation in 2012.
- 3. Exploitation of solar energy to generate electricity has started using solar cells (PV) with a capacity of one mega watt through exchange of a grant for debt with the Spanish Government.
- 4. Procedures have started to make use of soft loaning by the Clean Technology Fund (CTF) at the World Bank to fund the exploitation of thermal solar energy to generate electricity using concentrated solar systems (CSP).
- 5. Approval of the Law of Renewable Energy and Energy Rationalization No. 3 of 2010, which was published in the Official Gazette on 1/2/2010 in the field of energy consumption rationalization.
- 6. Measures have been taken to set up the Renewable Energy and Energy Rationalization Fund according to the Law of Renewable Energy and Energy Rationalization.
- 7. Study of the possibility of continued exemption of energy-saving machines and equipment and renewable energy equipment and machines from taxes and dues to reduce the cost of using such machines and equipment and increase their use.
- 8. Implementation of awareness programs and training in the field of energy conservation.

Challenges

Despite the achievements realized, this sector still encounters a set of challenges which should be addressed to secure the safe provision of energy services for all factions of society and economic and service sectors. Following are the main challenges:

- Shortage of local energy resources and dependence on imports from international markets, which has been accompanied by a rise in the energy bill.
- Increasing demand on oil and electricity.
- Rise in the cost of infrastructure investments, especially renewable energy, and difficulty in secure funding.
- Rise in energy consumption.
- High cost of mineral production and ambiguity of laws regulating the sector.

Long term objective

- 1. Energy security.
- 2. Diversification of energy resources.
- 3. Development and exploitation of domestic energy sources, renewable and conventional oil shale and uranium.
- 4. Transfer and settlement and development of nuclear energy and the development of uses and sustain
- 5. Increasing energy efficiency in all sectors.
- 6. Capitalize on the value added of mineral resources.

Short term objectives

- 1. Secure oil products supplies.
- 2. Secure electric power supplies.
- 3. Increase natural gas' share in the total energy mix

- 4. Increase renewable energy's share in the total energy mix.
- 5. Exploit shale oil to produce oil and generate electric power.
- 6. Rationalize energy consumption and improve its efficiency in all sectors.
- 7. Develop local sources of crude oil, natural gas and uranium.
- 8. Introduce nuclear energy in electric power generation and water desalination.
- 9. Increase investment in the mining sector.

Policies:

- 1. Restructuring of the oil sector.
- 2. Expand the use of natural gas.
- 3. Expand the use of renewable energy.
- 4. Promote the use of shale oil for electricity production.
- 5. Regulate the electricity sector.
- 6. Improve the inter-regional electricity connections.
- 7. Develop programs to improve energy conservation and efficiency.
- 8. Expand oil explorations in the kingdom.
- 9. Expansion of uranium exploration activities.
- 10. . Support and strengthen the nuclear program of Jordan.
- 11. Expand investment in the mineral sector.

Sixth: Communications and Information Technology

Knowledge economy is considered the main engine of economic growth through the availability of information and communication technology (ICT) and the use of innovation, in addition to the availability of qualified and highly skilled human resources. ICT is the main artery of the economy in all countries of the world, and Jordan has realized the importance of remaining abreast with the global developments of the sector, and that investment in infrastructure and communications services will be possible only by allowing the private sector to invest in the provision of telecommunications services. To this end, the Government has developed strategic plans for the ICT sector. The Ministry of Communications and Information Technology is responsible for policy development, while the Telecommunications Regulatory Commission is responsible for organizing the sector. The National Information Technology Center deploys optimum resources in government institutions and the private sector takes up the task of providing services and delivering them to the citizens.

As a result, the investment environment in the Kingdom became favorable and attracted investments in ICT, where models of partnership between domestic and international public and private sectors are continuously developed, in order to render Jordan among the list of countries that are more accessible in the field of communications and information technology. The sector saw significant improvement in various areas due to several key factors (a favorable investment environment, encouraging laws, communications network and a relatively skilled and specialized labor force).

The telecommunications and information technology (ICT) sector in Jordan is one of the most important sectors in terms of generating revenues to the state treasury and in terms of support to the national economy. The overall contribution of this sector to gross domestic product (GDP) accounted for 14.3% (9.5% directly and 4.8% indirectly) in 2008, and the estimated jobs provided by the sector amount to 82,000 (cumulative), which indicates the important role the sector plays in upgrading community employment in Jordan, whereby a large number of companies invested in manufacturing and software development rendering the Kingdom a major resource for the region's countries in the field of ICT.

The following table illustrates the indicators of the communications and information technology sector and postal services in 2009:

During the years 2007-2009, achievements have been accomplished and can be illustrated below:

- 1. The full privatization of Jordan Telecom.
- 2. Issuance of a number of policies and strategies, the revision of legislation for regulating and promoting the competitiveness of the sector, most importantly (general sector policy, the national strategy for the sector, the strategy for research and development, the strategy for security and protection of information, the national strategy for electronic commerce, the draft telecommunications law, the draft Law on Postal Services, draft licensing system and the adoption of electronic documentation, the draft licensing regime for mail operators), in addition to a range of regulatory decisions and instructions.
- 3. Reduction of sales tax on internet connection for homes from 16% to 8% to increase the prevalence of internet users.
- 4. Launch of the One Laptop per university student initiative: the initiative has provided (15200) portable device installments over four years for university students, to further spread the use of the Internet and the culture of information technology.
- 5. Launched a Project to support the training and operation of the graduates in the private sector in cooperation with the Ministry of Labor to set 500 graduates college every year, to include the provision of financial support up to 50% of the salary of graduates covered by the project and for one year and a half has been appointed 225 graduates since the start of the initiative in the second quarter of in 2009 and 57 companies benefited from the initiative.
- 6. A project was launched to support the training and employment of young graduates in the private sector in cooperation with the Ministry of Labor, aiming at employing 500 university graduates every year. The project includes the provision of financial support, where up to 50% of the salary of young graduates is covered by the project for one year and a half. 225 graduates have been appointed since the initiative started in the second half of 2009, benefiting 57 companies.
- 7. The introduction of the WI-MAX services, a rival to the fixed networks in the provision of internet services, which contributed to lower prices and increased proliferation and was also providing the infrastructure especially the path of Amman Aqaba for companies to enable them to find alternative routes to increase international competitiveness.
- 8. Allowing the submission of small-scale Internet service through toll-free numbers, as well as providing wide-scale internet services through a single billing system (Bit-stream Unbundling).
- 9. Continue to implement the e-government program, which aims at improving the performance of the government as a service provider and automating such services, which increases the efficiency and accuracy of service delivery, reduces the time required for business performance which in turn raises the level of customer satisfaction and creates synergies between the different government departments. To date, (46) online service were launched, (33) of which enabled electronic government. The main institutions which provide electronic services are: (Department of Public Tenders, the Income Tax and Sales

- Department, the Jordanian Customs Department for Lands and Survey, Department of Civil Affairs, the National Information Technology Center, the Jordan News Agency and the Greater Amman Municipality).
- 10. Continue the implementation of the national fiber optic network of national, linking (58) government institutions, (4) government health centers, (8) public universities, around (280) schools and (4) knowledge stations in the governorates of Amman, Aqaba and Irbid, and work is underway in the North.
- 11. Implementation of annual surveys of the ICT sector set to monitor and measure the use of ICT in households and institutions in order to provide indicators for policy and decision makers.
 - The following agreements were signed with strategic ICT corporations: Strategic partnership agreement with Microsoft, (3 million dollars to support projects and initiatives in the sector)
 - Strategic partnership agreement with Oracle, (3.1 million dollars to support projects and initiatives in the sector, training 86 government employees).
 - Strategic partnership agreement with Cisco.
 - Memorandum of Understanding with (Open Source), with the aim of introducing this system to the Kingdom.
- 12. Working to change the settling accounts between Jordan Telecom and Internet service providers for the part related to ADSL Traffic Collection of principle based on the number of ports on the principle of capacity Based / MB which allows reducing the prices of broadband Internet in the Kingdom.
- 13. Adoption of the revised instructions on the conditions and procedures for the introduction and use of computer networks run local terms which allows the use of frequency bands 2.4 GHz and 5.1 GHz outside buildings according to the conditions.
- 14. Third generation Orange Mobile services applied in the month of February, 2010.
- 15. In order to facilitate the rapid entry of new competitors and create new possibilities to enter the market, an agreement on strategic partnership was signed between Zain and Vrende Group allowing the latter to provide services via the Zain, (the first agreement of its kind in Jordan).
- 16. A new toll-free number for emergency communications (911) was introduced, a unified number for emergency services for the convenience of citizens.

Challenges:

Despite the achievements realized, this sector continues to encounter a set of challenges most important of which are the following

- Regional and international competition in the Information Technology sector.
- Lack of qualified human resources to meet the needs of the telecommunications and information technology sector.
- The high cost of access to the internet compared to the level of average income of Jordanian citizens, leading to low prevalence of internet users compared with similar countries.
- The contrast in the digital divide between different regions of the Kingdom.
- Lack of harmonization between the output of higher education and the requirements of the Jordanian labor market.
- Lack of promotion of the ICT activities.
- The existing culture of "Resistance to Change" in the Jordanian community.

Long term objective

- 1. Provide and diversify communications, information technologies and postal services of high quality and at reasonable prices through an effective regulatory and legislative environment and suitable infrastructure.
- 2. Keep abreast of global developments in the field of communications, information technology and postal services and increase the three sectors' competitiveness,

Short term objectives

- 1. Raise the rate of the use of computers, communications applications, information technology and internet.
- 2. Raise the volume of the communication sector revenues.
- 3. Contribute to the reduction of unemployment through increasing direct and indirect job opportunities in this sector and creating new job opportunities in other sectors.
- 4. Contribute to the development of public sector services through the implementation of the e-government program and National Fiber Optics Network.

Policies:

- 1. Access to prices close to the purchasing power of users of ICT services.
- 2. The creation and development of an enabling environment for ICT which would contribute to social and economic development.
- 3. Develop an enabling environment to increase the attractiveness of Jordan as a destination for investments.
- 4. Contribute to the transition to a knowledge-based society.
- 5. Implementation of a comprehensive technology strategy for the Jordanian government, including e-government applications that are compatible with the requirements of public sector reform.
- 6. Create a community connected to ICT means

Seventh: Environment

Jordan's environment is a mixture of scarcity of natural resources and wealth of human resources. The environmental challenges in the country are mainly in the fields of energy, water, desertification, waste management and lack of biological diversity. The relationship between sustainable development and environment quality is strong and direct. In a country like Jordan, which suffers from insufficient resources, especially in water, energy, food and elements of nature, the sustainable management of such scarce resources is an essential factor in the attainment of human development. Wise resource management can spare the country negative consequences which may take place as a result of shortage of resources and competition to acquire them. The challenges related to shortage of water, energy, desertification and deterioration of biodiversity aggravated by pollution and climatic changes may be less dangerous instantly than other economic and political challenges. However, the effects of such challenges are more durable with a wider scope and, unfortunately, are less reversible.

Per capita water consumption is less than 150 cubic meters per year, which is one of the lowest individual consumption levels in the world. Besides, Jordan's water resources are scarce and fluctuating. Jordan's annual energy average is about 780 million cubic meters of which 505 million cubic meters are surface waters and 275 cubic meters account for underground water resources. The quantity of annual non-renewable underground water is about 140 million cubic meters in Al-Disi and Aljifr basins.

Underground water constitutes about 70% of drinking water in Jordan. Underground water basins have been exhausted because of over-pumping leading to a sharp decrease in the underground waters level. Surface water is the main water source in Jordan and is distributed into 15 water basins.

About 61% of Jordan's population benefit from the sewage network, while sewage produced by the remaining population is gathered in septic holes. There are 31 plants to treat waste water in Jordan, including 22 plants run by the Water Authority. Al-Khirba Al-Samra plant is the largest in Jordan treating 75,3% of the total waste water. Water networks serve 98% of the population of Jordan, which is a major achievement by a developing country, while the amount of water used in the agricultural sector is about 588,4 million cubic meters, about 64% of the total consumed waters, 44,6% of the needs of irrigation water is covered by surface water sources, 41.7% by underground water and 13.7% by treated sewage water.

The major fixed sources of air pollution in Jordan are heavy and medium industries including oil refinery, phosphate and cement factories among other industries, which produce gases such as carbon dioxides and sulphur dioxides, because they still mainly depend on oil fuels to generate energy.

The movable sources of air pollution are mainly the transportation sector. The number of vehicles using petrol has risen six times between 1981 and 2006, while the number of vehicles using diesel has increased more than ten times during the same period. Total greenhouse gas emissions are about 20 tons per year. These are very little emissions compared with those in industrially advanced countries.

Jordan enjoys rich biodiversity due to its geo-location and the existence of the Rift Valley constituting great divergence between high and low areas. Jordan is also characterized by the existence of the basalt desert with natural valleys. The country is divided into four different vital geographical regions. 13 plant species have been classified within these diverse regions. Each pattern represents different plant and animal species with many having global importance. It is

worth stating that there are seven reserves in Jordan covering about 1144 square kilometres: Dana Reserve, Al-Azraq Reserve, Al-Shomari Reserve, Al-Mujeb Reserve, Ajloun Reserve, Wadi Rum Reserve and Dibeen Reserve. New additional nine reserves are to be set up within the next three years covering about 2772 square kilometres. The total area of these natural reserves is to form 6% of Jordan's total area, which is twice the average area of reserves in the Middle East region.

At present, Jordan is encountering rising desertification rates due to soil deterioration resulting from several negative practices such as urban expansion at the expense of land and displacement of citizens as a result of repeated forced migrations. Water resources scarcity contributes to the aggravation of this problem, which has led to the receding density of the plant cover and acceleration of agricultural lands erosion.

Jordan has witnessed tangible improvement in solid waste collection. The rates are between 70% and 90% in rural and urban areas. Solid waste management is undertaken by the Government with direct financial support, while the private sector's participation is relatively modest. Yet, waste management in the Kingdom still lacks sound environmental measures after waste is unloadeded into dumping sites, because of the lack of appropriate infrastructure of such sites. There are currently 21 waste disposal sites, where waste is disposed of by burial or direct burning, unlike the most advanced countries which seek to increase the options of waste disposal to include burning, recycling. Al-Ghabawi site is the only modern dumping site which applies suitable selection standards set by the World Health Organization by treatment about 60% of solid waste. As for hazardous and chemical waste, Jordan is committed as member signatory of the Basil Agreement to reduce its production and monitor its disposing. Central units are under construction to process medical and industrial waste in the West Region in partnership with the private sector.

The Ministry of Environment will develop a national strategy and action plan for green economy in cooperation with the United Nations Environment Program (UNEP), contributing to human and economic development by developing a green economy approach, which a lot of countries have started to apply. The Jordanian Ministry of Environment developed during the past five years many mechanisms and initiatives, which constitutes a major factor in developing a suitable base for launching a comprehensive program for guiding all initiatives related to sustainable environment in Jordan and adopting the green economy. Through vitality in the implementation of international environmental programs, Jordan has succeeded in adopting various reform elements and has attracted the attention of many donor countries and international organizations towards the application of green economy concepts in this country leading them to make use of Jordanian competitive advantages in the fields of policies, legislation, human and scientific qualified resources and civil society organizations, which represents the most important responding elements to the challenges of natural resources abundance.

The strategy to adopt green economy in Jordan is composed of several elements. There is a set of existing programs, which the Ministry of Environment and all Jordanian concerned parties, are implementing during 2010 to support the adoption of green economy including the following programs: The Cleanest Production Program, launching the Jordanian Environment Protection Fund, and promotion of renewable energy, energy effeciency rationalization, development of the private sector to create jobs in environmental consultations and services, development of renewable energy technology, eco cities initiative, sound management, collection and recycling of waste, protection of natural environmental systems and rehabilitation of damaged ones, promotion of domestic environmental tourism derived from environmental and human heritage, environmental inspection and protection, development of integrated information systems, methodology of assessing projects' environmental impact of investment projects to reduce negative effects on the environment, program to adopt environment-friendly materials which do not harm the ozone layer in the industrial and agricultural sectors.

Achievements related to environment protection were realized during the years 2007-2009 most important of which were the following:

• Land protection and combating desertification:

- 1. Drawing up the integrated financing strategy to implement the National Action Plan for Combating Desertification in which the institutional, legislative and financial frameworks related to desertification are analyzed, steps to enhance the environment for improving the national framework to support mobilization of combating desertification projects are identified and foreign funding re-sources and donor entities priorities are analyzed. An action plan to implement the strategy within five years has been developed.
- 2. Developing an action plan to utilize Ajloun Mountain with area estimated about 1000 km², in order to protect the environment in order to promote investments.
- 3. A road plan has been formulated to rehabilitate and develop pasture land in the Jordanian desert through the environmental compensation program, In addition, a guiding manual has been prepared for writing proposed projects aimed at rehabilitating and developing environmental systems in the Jordanian desert and start to implement pilot projects in several sites in the desert.

• Combating air pollution:

- 1. Full adoption of the use of un-leaded petrol.
- 2. 20% of Jordan's population are covered by monitoring air quality in their regions through projects for monitoring the concentration of air pollutants released by factories in (Al-Hashiniya area, Al-Fhais area, Al-Qadisiya area), industrial zones and industrial cities. Some factories have been electronically connected to the Ministry of Environment to monitor pollutants concentrations at environmentally safe levels.

• Adjustment to climatic change:

- 1. The establishment of the National Commission for Clean Development.
- 2. Approval of 13 projects as clean development mechanisms projects, namely the adoption of using natural gas at Aqaba Thermal Plant through which Jordan obtains its international rights from the returns of carbon exchange after the reduction of greenhouse gases emission by about 400,000 tons per year.
- 3. Preparing and publishing the second report on national statements on climate change, which forms a scientific reference for decision makers on all details of greenhouse gases emission and options of adjustment and mitigation of climate effects.
- 4. Starting to implement a national program for adjustment with climate effects through focusing on water resources management.

• Treatment of pollution and treatment solid and liquid waste:

1. Setting up plant to process industrial sewage at Al-Hasan Industrial City financed by the private sector and setting up a central plant to process industrial sewage in Al-Zaraq,

- 2. Setting up evaporation pools with a capacity of 50 thousand cubic meters at Al-Akaidir Dumping Site and another one with a capacity of 7 thousand cubic meters at Al-Hamra Dumping Site to process liquid waste resulting from olive presses,
- 3. Environmental monitoring and control of dangerous waste produced by factories and its management in Jordan through a system to monitor industrial liquid and semi-solid waste from their source to the points of professing it and final disposal of them,
- 4. Prohibition of the use of biological fertilizers in Al-Aghwar and setting up a plant to process this kind of fertilizers in order to combat the existence of flies in this area,
- 5. Jordan was able to clear of about 97% of the materials which deplete the ozone layer at the beginning of 2008.

• Biological diversity and environmental systems protection:

- 1. Starting to implement the strategy of rehabilitating Zarqa Stream through the institutional capacity building of the Ministry of Environment and Allied Entities to rehabilitate Zarqa Stream by developing and implementing a set of pilot projects in various sectors in Sail Zarqa, developing a comprehensive rehabilitation plan adopting the concepts of natural resources integrated management and an approach for the environmental system.
- 2. Issue of the National Policy for the Protected Areas Network,
- 3. Drawing up the Fourth National Report on Biological Diversity submitted to the United Nations.
- 4. Preparation of the file of nominating Wadi Rum for the World Heritage List.

• Improvement of institutional frameworks and raising institutional environmental awareness:

- 1. Create a system to deal with emergency cases and regulations to grant prior approval or renewal of licensing environmental societies.
- 2. Set up the Royal Administration for Environmental Protection (formerly Environmental Police).
- 3. Preparation of numerous reports pertaining to the environment including the First Report on the Environmental Status in Jordan, Report of National Statements According to the Climactic Change Agreement, Report of Natural Reserves Network and National Report on Biodiversity and Combating Desertification.
- 4. Convening of the first forum for environmentally friendly cities and issue of the Amman Declaration and a number of recommendations including the need to convene the forum once every two years and monitoring programs for eco-cities.
- 5. Implementation of capacity building programs for environmental inspectors at the Ministry of Environment and the Royal Administration for Environment Protection for the purpose of the optimal implementation of the environmental inspection system.

Challenges:

Despite the richness and diversity of nature in Jordan, environment elements are subject to overuse which may threaten the sustainability of numerous ecosystems and natural species in Jordan. This

will require continued intervention to address challenges threatening environmental elements, adversely affecting its sustainability and preventing the success of applying environmental programs and initiatives, the environment sector still encounters the following challenges:

- Failure to appropriately manage solid waste in all its forms: households waste, industrial waste, medical waste, industrial waste and toxic waste.
- Better monitoring of air pollutants resulting from the growth in the sectors of industry, transport and energy.
- Increasing aggression on natural reserves and forests.
- Environmental degradation at the Dead Sea and the Red Sea.
- Real estate construction encroaching on agricultural land.
- Weak institutional awareness of environmental safeguards and lack of coordination among the various concerned sectors.
- Failure to link environmental degradation to the national economy,
- Shortage of technical environmental staff in institutions related to the environment.
- Absence of a comprehensive management plan for natural water resources and systems.

Long term objectives

To protect environment elements and their sustainability,

Short term objectives

- 1. Developing tools of sustainable environmental management
- 2. Promoting environmental orientation and awareness raising
- 3. Introducing integrated management of waste
- 4. 4. Ecosystem protection.
- 5. Reducing pollution.
- 6. Curbing climatic change
